Evidence & limitations

- METAR source state: ok; observed Sep 26 19:56 ET; retrieved Sep 26 21:29 ET; 93 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- Raw METAR: METAR KLZU 262356Z 28004KT 10SM CLR 22/11 A2995 RMK A02 SLP148 T02220111 10267 20222 55004 \$

• KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 280 degrees true, 286 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 25. Wind source: KLZU METAR 262356Z.

Important planning / evidence detail (1 warning)

LEGEND **VFR** **MVFR** **IFR** **LIFR** **Unknown**  Solid = source-interval category guidance:  Dashed = lower-confidence outlook  Weather icon = surface forecastAll times Eastern (ET), 24-hour clock · "around/after" preserves source precision.  △ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing. A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

METAR – issued hourly. The NWS issues a SPECI report if conditions change significantly. Issued by the NWS, not a forecast. KLZU observations are described here.

TAF – The NWS issues a TAF for the next 24 hours. It is the most reliable forecast for the next 24 hours. KLZU observations are described here.

NWS hour – Weather Service hourly forecast. Coarser than the 24-hour forecast. KLZU observations are described here.

NWS day/night – Weather Service day/night forecast. Coarser than the 24-hour forecast. KLZU observations are described here.

GFS Model – Global Forecast System model. Coarser than the 24-hour forecast. KLZU observations are described here.

GFS ensemble – Global Forecast System ensemble model. Coarser than the 24-hour forecast. KLZU observations are described here.

GFA and GFS – Global Forecast System and Global Forecast System ensemble model. Coarser than the 24-hour forecast. KLZU observations are described here.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — issued hourly. The highest visibility, wind, and temperature are reported. Issued by the National Weather Service. Not a forecast. KLZU observations describe the current weather.

TAF — The National Weather Service issues a forecast for the next 24 hours. It includes the time of day and the forecasted weather. It is the most detailed forecast available.

NWS hour — The National Weather Service issues a forecast for the next 6 hours. It includes the time of day and the forecasted weather. It is the most detailed forecast available.

NWS day/night — The National Weather Service issues a forecast for the next 12 hours. It includes the time of day and the forecasted weather. It is the most detailed forecast available.

GFS M — The Global Forecasting System (GFS) is a numerical weather prediction model. It is the most detailed forecast available.

GFS E — The Global Forecasting System (GFS) is a numerical weather prediction model. It is the most detailed forecast available.

GFA and NOTAM — The Global Forecasting System (GFS) is a numerical weather prediction model. It is the most detailed forecast available.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interpret them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

SHORT TERM

..
(This evening through Sunday)
Issued at 300 PM EDT Sat Sep 26 2026

The sensible weather today and Sunday will be driven by a vertically stacked low pressure system lingering near the New England Coast and upper level ridging amplifying over the Great Plains. Georgia will remain underneath northwesterly flow between these two features, which will continue to bring dry, Canadian continental air into the region. No rain is expected as long as this pattern remains in place. Temperatures this afternoon are expected to peak in the upper 70s to low 80s across all but the far northeastern mountains (low to mid 70s) under mostly sunny skies. Strong diurnal mixing will allow dewpoints in portions of east-central Georgia to drop into the low to mid 40s compared to upper 40s to low 50s elsewhere across the area. Relative humidity values in this area could reach as low as 25% for an hour or two this afternoon.

Conditions will be cool and crisp overnight, with clear skies aiding in radiational cooling. Low temperatures early Sunday morning are expected to range from the upper 40s in far northeast Georgia to the upper 50s in south-central Georgia. Another shot of dry will be pulled into the region on the back side of the low during the daytime on Sunday, dropping dewpoints into the low to mid 40s and precipitable water values to between 0.4-0.6" areawide by the afternoon. Temperatures will be a couple of degrees higher than today areawide, so a few locations may also see RH values near 25% for an hour or two on Sunday afternoon, though not for long enough to warrant a Fire Danger Statement at this time.

LONG TERM

..
(Monday morning through next Friday)
Issued at 300 PM EDT Sat Sep 26 2026

Pleasant conditions will start off the long term as we begin the work week. Temperatures in the upper 80s and lower 90s for much of the CWA as the high pressure begins to break down and winds become more southerly.

As we approach the weekend, the ridge will begin to break down and southerly flow will begin to pull moisture back into the CWA. This will bring chances for thunderstorms back up to between 25-35% during the afternoon, though temperatures should remain moderated to the upper 80s and lower 90s. While widespread severe weather doesn't appear likely this weekend given the weak dynamics out a head of a strong low, we'll need to keep an eye on early next week as a more potent trough exits the southwest.

737 PM EDT Sat Sep 26 2026

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- A cooler airmass will remain in place through the weekend with highs in the 70s to low 80s.

- Dry conditions are expected through the middle of next week.

- Warming trend back to above normal temperatures from early to mid next week.

&&

.SHORT TERM...

(This evening through Sunday)
Issued at 300 PM EDT Sat Sep 26 2026

The sensible weather today and Sunday will be driven by a vertically stacked low pressure system lingering near the New England Coast and upper level ridging amplifying over the Great Plains. Georgia will remain underneath northwesterly flow between these two features, which will continue to bring dry, Canadian continental air into the region. No rain is expected as long as this pattern remains in place. Temperatures this afternoon are expected to peak in the upper

70s to low 80s across all but the far northeastern mountains (low to mid 70s) under mostly sunny skies. Strong diurnal mixing will allow dewpoints in portions of east-central Georgia to drop into the low to mid 40s compared to upper 40s to low 50s elsewhere across the area. Relative humidity values in this area could reach as low as 25% for an hour or two this afternoon.

Conditions will be cool and crisp overnight, with clear skies aiding in radiational cooling. Low temperatures early Sunday morning are expected to range from the upper 40s in far northeast Georgia to the upper 50s in south-central Georgia. Another shot of dry will be pulled into the region on the back side of the low during the daytime on Sunday, dropping dewpoints into the low to mid 40s and precipitable water values to between 0.4-0.6" areawide by the afternoon. Temperatures will be a couple of degrees higher than today areawide, so a few locations may also see RH values near 25% for an hour or two on Sunday afternoon, though not for long enough to warrant a Fire Danger Statement at this time.

&&

.LONG TERM...
(Monday morning through next Friday)
Issued at 300 PM EDT Sat Sep 26 2026

Pleasant conditions will start off the long term as we begin the work week. Temperatures in the upper 80s and lower 90s for much of the CWA as the high pressure begins to break down and winds become more southerly.

As we approach the weekend, the ridge will begin to break down and southerly flow will begin to pull moisture back into the CWA. This will bring chances for thunderstorms back up to between 25-35% during the afternoon, though temperatures should remain moderated to the upper 80s and lower 90s. While widespread severe weather doesn't appear likely this weekend given the weak dynamics out a head of a strong low, we'll need to keep an eye on early next week as a more potent trough exits the southwest.

&&

.AVIATION...
(00Z TAFS)
Issued at 722 PM EDT Sat Sep 26 2026

VFR conditions will prevail through the period. Surface winds will be light and variable overnight, then become NW around 6-10 kts after 16Z on Sunday. A few Cu around 4-7kft may redevelop around the area by tomorrow afternoon.

//ATL Confidence...00Z Update...
High confidence on all elements.

340° true · 347° magnetic · 8G15 kt · also NOTAM-affected: 17 and 35

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:54 ET; retrieved Sep 26 21:29 ET; 95 min before this run.
- Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 340 degrees true, 347 degrees magnetic, at 8 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 35 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 262354Z.

43 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

... and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-09-27T01:29:29.482985Z.

44 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published VFR Surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:35 ET; retrieved Sep 26 21:29 ET; 114 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.90 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

Wind favours RWY 36

290° true · 299° magnetic · 4 kt · also NOTAM-affected: 18 and 36

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.88 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 290 degrees true, 299 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 262353Z.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.86 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

3 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHXD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:54 ET; retrieved Sep 26 21:29 ET; 95 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 310 degrees true, 319 degrees magnetic, at 16 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 262354Z.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air
Missions: closures, outages, obstacles and

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published VFR Surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:56 ET; retrieved Sep 26 21:29 ET; 93 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 060 degrees true, 067 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KSGJ METAR 262356Z.

13 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:35 ET; retrieved Sep 26 21:29 ET; 114 min before this run.
- Measured values read from the KSHD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 350 degrees true, 000 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KSHD METAR 262335Z.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 220 degrees true, 223 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KECP METAR 262353Z.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with	
TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.	
GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against	
GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in	
GFA and prog charts — the Graphical	

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.91 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 020 degrees true, 027 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 07L and 07R. Wind source: KDAB METAR 262353Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published VFR Surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

published WPC surface chart matches this period and is shown in the dropdown with its

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:35 ET; retrieved Sep 26 21:29 ET; 114 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.87 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 340 degrees true, 346 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KTPF METAR 262335Z.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.91 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 320 degrees true, 326 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 262353Z.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:35 ET; retrieved Sep 26 21:29 ET; 114 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.88 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 320 degrees true, 326 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 31. Wind source: KVNC METAR 262335Z.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:53 ET; retrieved Sep 26 21:29 ET; 96 min before this run.

- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 250 degrees true, 251 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 27. Wind source: KNEW METAR 262353Z.

Evidence & limitations

- METAR source state: ok; observed Sep 26 19:56 ET; retrieved Sep 26 21:29 ET; 93 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.73 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 360 degrees true, 013 degrees magnetic, at 14 knots gusting 27 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KHPN METAR 262356Z.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

 - Runway data + Chart Supplement — [FAA Chart Supplement \(current cycle\)](#) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 5 SIGMET records, 24 G-AIRMET records. Regional current observations (not corridor forecasts): Atlantic South: category unavailable at KFIN; Gulf East: category unavailable at KSPG; Long-range: IFR/LIFR at KHPN, KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 262356Z 28004. AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=5, G-AIRMET=24, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=989; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 25 – Mon Sep 28, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Sep 25 – Mon Sep 28, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Sep 26, 18:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF.
- Sun Sep 27, 06:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Sep 28, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- A forecast flight category is available for 3 of 3 active trip days; 0 reach no category-capable product at this lead time.

• Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (3/3 d), KBED LIFR (3/3 d), KBFM VFR (3/3 d), KCRE VFR (3/3 d), KCRG VFR (3/3 d), KDAB VFR (3/3 d), KECP VFR (3/3 d), KFIN VFR (3/3 d), KGKT VFR (3/3 d), KGPT VFR (3/3 d), KHPN LIFR (3/3 d), KHS A VFR (3/3 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 29 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 28 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 29 of 29 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET ZULU — ICE: contains KHPN, KBED (point-in-polygon (ray casting) against the product's own coordinate ring). valid 2026-09-26 23:29Z to 2026-09-27 03:00Z.
- G-AIRMET ZULU — ICE: contains KSHD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 16 NM, KROA 55 NM. valid 2026-09-26 23:29Z to 2026-09-27 03:00Z.
- G-AIRMET SIERRA — IFR: contains KHPN, KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSHD 98 NM. valid 2026-09-27 00:06Z to 2026-09-27 03:00Z.
- G-AIRMET TANGO — TURB-HI: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 23 NM. valid 2026-09-26 20:45Z to 2026-09-27 03:00Z.
- G-AIRMET TANGO — TURB-HI: contains KSHD, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 21 NM, KAVL 77 NM, KGKT 83 NM, KCRE 84 NM, KMYR 96 NM. valid 2026-09-26 20:45Z to 2026-09-27 03:00Z.
- G-AIRMET TANGO — TURB-LO: contains KTRI, KAVL, KHPN, KROA, KSHD, KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KGKT 16 NM, KLZU 83 NM. valid 2026-09-26 20:45Z to 2026-09-27 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KROA 6 NM, KSHD 42 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-26 23:29Z to 2026-09-27 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KCRG 11 NM, KSGJ 35 NM, KSSI 37 NM, KECP 58 NM, KBFM 72 NM, KPNS 77 NM, KDAB 83 NM, KJKA 90 NM, KGPT 91 NM, KSAV 93 NM, KH XD 95 NM, KHS A 97 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-26 23:29Z to 2026-09-27 03:00Z.
- G-AIRMET TANGO — LLWS: boundary within 100 NM of KHPN 40 NM, KSHD 92 NM. valid 2026-09-26 20:45Z to 2026-09-27 03:00Z.
- G-AIRMET TANGO — SFC_WND: boundary within 100 NM of KBED 25 NM. valid 2026-09-26 20:45Z to 2026-09-27 03:00Z.
- G-AIRMET TANGO — SFC_WND: boundary within 100 NM of KHPN 24 NM, KBED 50 NM. valid 2026-09-26 20:45Z to 2026-09-27 03:00Z.
- 18 of 29 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 5, G-AIRMET 24, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-27T01:29:24.089499+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 5 of 15 current NOTAMs are new by that baseline — 09/033 (AIRSPACE_FDC, last_updated_at 2026-09-25T15:27:00+00:00); 09/034 (OBSTRUCTION, last_updated_at 2026-09-25T18:40:00+00:00); 09/035 (RUNWAY, last_updated_at 2026-09-26T01:19:00+00:00); A0357/26 (RUNWAY, last_updated_at 2026-09-26T01:19:00+00:00); 09/036 (OBSTRUCTION, last_updated_at 2026-09-27T00:52:00+00:00).
- No service-status wording was found in the published text of the 15 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
