VFR MVFR IFR LIFR Unknown

Solid = source-interval category guidance; Dashed = lower-confidence outlook

Weather icon = surface forecast

All times Eastern (ET), 24-hour clock · “around/after” preserves source precision.

⚠ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- NOTAM

METAR – issued hourly. The NWS issues a METAR every hour, except during the hour of the day when the weather is not changing. METARs are issued by aviation weather observers at airports. They are not a forecast. They describe current conditions at the time of observation. KLZU observations are used to verify the forecast.

TAF – The NWS issues a TAF every 6 hours. It contains a forecast of the weather for the next 24 hours. It is issued by the NWS. TAFs are used by pilots to plan their flights. They are not a forecast. They describe current conditions at the time of observation. KLZU observations are used to verify the forecast.

NWS hour – Weather Service hourly forecast. It contains a forecast of the weather for the next 24 hours. It is issued by the NWS. Hourly forecasts are used by pilots to plan their flights. They are not a forecast. They describe current conditions at the time of observation. KLZU observations are used to verify the forecast.

NWS day/night – Weather Service day and night forecast. It contains a forecast of the weather for the next 24 hours. It is issued by the NWS. Day and night forecasts are used by pilots to plan their flights. They are not a forecast. They describe current conditions at the time of observation. KLZU observations are used to verify the forecast.

GFS Model – Global Forecast System. It is a numerical weather prediction model. It is used by the NWS to issue forecasts. It is not a forecast. It describes current conditions at the time of observation. KLZU observations are used to verify the forecast.

GFS ensemble – Global Forecast System ensemble. It is a numerical weather prediction model. It is used by the NWS to issue forecasts. It is not a forecast. It describes current conditions at the time of observation. KLZU observations are used to verify the forecast.

GFA and GFS – Global Forecast System and Global Forecast System ensemble. It is a numerical weather prediction model. It is used by the NWS to issue forecasts. It is not a forecast. It describes current conditions at the time of observation. KLZU observations are used to verify the forecast.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

METAR — issued hourly. The highest visibility, wind, and temperature are reported. Issued by the National Weather Service (NWS) and the FAA. Not a forecast. KLZU obs describes

TAF — The NWS issues a TAF for each station. It contains the forecast for the next 24 hours, including the time of day and the time of day. It is the most accurate forecast available for a station.

NWS hour — The NWS issues a 3-hour forecast for each station. It contains the forecast for the next 3 hours, including the time of day and the time of day. It is the most accurate forecast available for a station.

NWS day/night — The NWS issues a 12-hour forecast for each station. It contains the forecast for the next 12 hours, including the time of day and the time of day. It is the most accurate forecast available for a station.

GFS M — The GFS M is a 12-hour forecast for each station. It contains the forecast for the next 12 hours, including the time of day and the time of day. It is the most accurate forecast available for a station.

GFS E — The GFS E is a 12-hour forecast for each station. It contains the forecast for the next 12 hours, including the time of day and the time of day. It is the most accurate forecast available for a station.

GFA and NOTAM — GFA and NOTAM are used to provide information about the airport. GFA is used to provide information about the airport's status, and NOTAM is used to provide information about the airport's operations. They are used to provide information about the airport's status and operations.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

stalled frontal boundary across northern Georgia. — .. (Tuesday morning through next Friday) Issued at 228 PM EDT Sat Oct 3 2026

The front lingers across far southern Georgi...

SHORT TERM

..
(This afternoon through Monday) Issued at 228 PM EDT Sat Oct 3 2026

Showers got an early start this morning thanks to an unseasonably moist air mass in place across the southeast just ahead of a stalled frontal boundary across northern Georgia. The 12Z sounding here in Peachtree City measured PWAT of 1.91" - just 0.02" short of the record for 12Z 10/3, though well short of the monthly record (October is still part of hurricane season, as we all have experienced in the past few years). This tropical air mass will linger through the rest of today and get reinforced into Sunday bringing the potential for some heavy rainfall to parts of north and central Georgia.

Showers and a few rumbles of thunder will likely continue through the rest of the day. Temperatures may end up underachieving in many areas compared to the forecast thanks to the cloud cover and rain showers, but in places where the sun does come out it will be warm and moist with highs into the mid 80s. Isentropic analysis of the 300K and 305K isentropes shows some shallow isentropic ascent is happening between 900-800mb which is in line with the vertical profile from this morning's sounding. As we heat up there is a bit of shallow instability in the low to mid-levels that is convectively enhancing some of the showers, leading to brief periods of heavier rainfall and the small chance of seeing a few rumbles of thunder where updrafts can get above the freezing level. Overall amounts shouldn't be anything of concern today in most places, but areas that experience repeated rounds of heavier rainfall could see an instance or two of flash flooding.

Looking at the broader synoptic picture, the trough over the northeast that brought the front in close to us pushes out over the Atlantic today. Surface high pressure sweeps in behind as DAVA and confluent flow aloft build in overhead. Surface high quickly pushes over the Appalachians and our favorite friend "the wedge" (CAD) moves southward into the CWA, pushing into the area tonight. Low clouds, showers of rain and some patchy fog are likely to great most folks across NE GA and the metro tomorrow morning. Alongside all this, a potent shortwave will dig towards the area, drawing up additional moisture from the gulf from a weak tropical wave. This system will progress across the CWA on Sunday. Isentropic lift will bring a steady rain to basically the entire CWA as moisture is lifted over the wedge and a southward progressing cold front. Some embedded convective elements will be possible, and the very high PWATs mean this rain could be pretty efficient at times. Basically, Sunday will probably be a wash out for most everyone. The upside is the temperatures will be much cooler than the previous few days - back into the 70s for most (and there is a chance some places in NE Georgia don't get out of the upper 60s).

Several inches of additional rainfall will be possible on Sunday.

Current hi-res ensemble guidance (both HREF and REFS) show average precip amounts of 1-3" for much of the area, possible a bit higher in south and east central Georgia. 90th percentile amounts likely represent an upper bound of some of the more convective elements, which shows some pockets of 4-5". These amounts are more likely along and south of I-85, where best moisture/lift look like they will coincide. These amounts don't quite warrant flood products. Places below the fall line have sandy soils that can handle quite a bit more rain than the more clay soils above, and rivers, creeks and streams are at the typical October minimums at the start of the "water year". That all said, heavy enough rain in the right place (like the urban jungle of Atlanta) can certainly trigger flash flooding, especially when an inch or two has already fallen over the past few hours.

Steady rain will continue through the afternoon and well into the evening hours for most. Rainfall should come to and end from northwest to southeast overnight for areas north of I-85 as the front begins to sag further south and drier air pushes in. This will be a slow process, so rain should linger well into the day on Monday for parts of central Georgia, and some showers may be possible as far north as the I-85 corridor depending on how the front stalls. Some clearing should begin Monday night for central Georgia, though again, uncertainty on how far south the front sags mean that showers could linger even into Tuesday.

LONG TERM

..
(Tuesday morning through next Friday) Issued at 228 PM EDT Sat
Oct 3 2026

The front lingers across far southern Georgia Tuesday and Wednesday. There is some uncertainty as to how much rain the very southern counties of our CWA will get as we move into next week. Forecast totals range from a half an inch to an additional two inches until the front is pushed off to the east on Wednesday.

For a majority of the area however, rain is expected to come to an end overnight Tuesday morning. Dry air will settle in across much of the area north of a line from Columbus to Augusta with high temperatures in the mid to upper 70s. Overnight lows will fall into the 50s with 40's likely in the higher elevations of northern Georgia. By the time we get to Thursday, rain chances for the CWA drop to nearly zero.

Long term models indicate that we'll be going into a weekly pattern as another short wave gets set to move through the upper level flow by next weekend which should bring showers and maybe a thunderstorm back into the forecast. &&

Area Forecast Discussion
National Weather Service Peachtree City GA

229 PM EDT Sat Oct 3 2026

...Afternoon Area Forecast Discussion...

.KEY MESSAGES...

- Scattered showers and thunderstorms are expected this afternoon and evening before widespread rainfall overspreads the area on Sunday.
- The potential for heavy rainfall and localized flash flooding peaks from Sunday into Monday with highest rainfall totals currently favored along and south of the I-85 corridor.
- Temperatures trend more fall-like next week in the wake of a cold front.

&&

.SHORT TERM...

(This afternoon through Monday) Issued at 228 PM EDT Sat Oct 3 2026

Showers got an early start this morning thanks to an unseasonably moist air mass in place across the southeast just ahead of a stalled frontal boundary across northern Georgia. The 12Z sounding here in Peachtree City measured PWAT of 1.91" - just 0.02" short of the record for 12Z 10/3, though well short of the monthly record (October is still part of hurricane season, as we all have experienced in the past few years). This tropical air mass will linger through the rest of today and get reinforced into Sunday bringing the potential for some heavy rainfall to parts of north and central Georgia.

Showers and a few rumbles of thunder will likely continue through the rest of the day. Temperatures may end up underachieving in many areas compared to the forecast thanks to the cloud cover and rain showers, but in places where the sun does come out it will be warm and moist with highs into the mid 80s. Isentropic analysis of the 300K and 305K isentropes shows some shallow isentropic ascent is happening between 900-800mb which is in line with the vertical profile from this morning's sounding. As we heat up there is a bit of shallow instability in the low to mid-levels that is convectively enhancing some of the showers, leading to brief periods of heavier rainfall and the small chance of seeing a few rumbles of thunder where updrafts can get above the freezing level. Overall amounts shouldn't be anything of concern today in most places, but areas that experience repeated rounds of heavier rainfall could see an instance or two of flash flooding.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:54 ET; retrieved Oct 3 19:13 ET; 79 min before this run.
- Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 310 degrees true, 317 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 35 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 032154Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:27 ET; retrieved Oct 3 19:13 ET; 106 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 060 degrees true, 067 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KSAV METAR 032127Z.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:15 ET; retrieved Oct 3 19:13 ET; 118 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 060 degrees true, 067 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSSI METAR 032115Z.

Wind favours RWY 18

200° true · 209° magnetic · 4 kt · also NOTAM-affected: 18 and 36

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.10 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 200 degrees true, 209 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 18 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 032153Z.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 220 degrees true, 229 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 032153Z.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:50 ET; retrieved Oct 3 19:13 ET; 83 min before this run.
- Measured values read from the KHxD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHxD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 060 degrees true, 068 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 03. Wind source: KHxD METAR 032150Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:54 ET; retrieved Oct 3 19:13 ET; 79 min before this run.

- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.24 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 030 degrees true, 039 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KROA METAR 032154Z.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Mon, Oct 5 • 06:00–12:00 ET: GFS MAV MOS • 06:00–12:00 ET ET • MVFR

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:56 ET; retrieved Oct 3 19:13 ET; 77 min before this run.

- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 130 degrees true, 137 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KSGJ METAR 032156Z.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 130 degrees true, 137 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KCRG METAR 032153Z.

13 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:50 ET; retrieved Oct 3 19:13 ET; 83 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 170 degrees true, 177 degrees magnetic, at 9 knots gusting 16 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KFIN METAR 032150Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KTYS is used as a proxy; that is a normal condition, not a failure.

Forecast for Aviation and the weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:15 ET; retrieved Oct 3 19:13 ET; 118 min before this run.
- Measured values read from the KSHD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.28 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSHD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 150 degrees true, 153 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KECP METAR 032153Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KECP this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Category and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:33 ET; retrieved Oct 3 19:13 ET; 100 min before this run.

- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 150 degrees true, 152 degrees magnetic, at 17 knots gusting 25 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 032133Z.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:16 ET; retrieved Oct 3 19:13 ET; 117 min before this run.

- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 180 degrees true, 187 degrees magnetic, at 10 knots gusting 24 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KDAB METAR 032116Z.

Effective 2026-09-28T01:25:00Z → 2026-10-12T23:00:00Z

48 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KDAB observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 070 degrees true, 071 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KGPT METAR 032153Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 220 degrees true, 226 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 25. Wind source: KSPG METAR 032153Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

...ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:15 ET; retrieved Oct 3 19:13 ET; 118 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 180 degrees true, 186 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KVNC METAR 032115Z.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:50 ET; retrieved Oct 3 19:13 ET; 83 min before this run.
- Measured values read from the KHSa METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:40 ET; retrieved Oct 3 19:13 ET; 93 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 080 degrees true, 081 degrees magnetic, at 17 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KNEW METAR 032140Z.

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:53 ET; retrieved Oct 3 19:13 ET; 80 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 110 degrees true, 117 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 12. Wind source: KOPF METAR 032153Z.

Evidence & limitations

• METAR source state: ok; observed Oct 3 17:56 ET; retrieved Oct 3 19:13 ET; 77 min before this run.

• Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.25 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

SAT 3 OCT 17:51 ET OBSERVED

Current observation

METAR

OBSERVED

clear below 12,000 ft (CLR)

WINDE (110°) 6 kt

TEMPERATURE16 °C

VISIBILITY10 sm

DEWPOINT8 °C

From 124°W · 6 kt

Wind favours RWY 11

110° true · 124° magnetic · 6 kt · also NOTAM-affected: 11 and 29

Evidence & limitations

- METAR source state: ok; observed Oct 3 17:51 ET; retrieved Oct 3 19:13 ET; 82 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.27 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 110 degrees true, 124 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The wind-favoured end 11 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 032151Z.

• MOS effective date selection — state=partial; rows=18; requested-station=KBED; actual-station=KBED; fetched-at=2026-10-03T23:14:22.233034+00:00; observed-or-issued-at=2026-10-03T18:00:00+00:00; valid-from=2026-10-04T00:00:00+00:00; valid-through=2026-10-06T18:00:00+00:00; target-dates=2026-10-04,2026-10-05; partial-target-dates=2026-10-03; dates-with-points=2026-10-03,2026-10-04,2026-10-05; selected-by-date=2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=GFS

• Extended outlook and hazard-feed states are reported in the source stamp.

• Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 22 G-AIRMET records, 5 CWA records. Regional current observations (not corridor forecasts): Mountain: MVFR at KROA, KSHD; Atlantic South: IFR/LIFR at KHXD; Atlantic South: MVFR at KJZI, KFIN; Gulf East: IFR/LIFR at KDAB.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 032156Z 00000. AWC METAR state OK for 30/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=22, CWA=5; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=997; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: unavailable this run.

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Oct 2 – Mon Oct 5, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Oct 3, 18:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Oct 4, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- Mon Oct 5, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from MOS.
- A forecast flight category is available for 3 of 3 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (3/3 d), KBED IFR (3/3 d), KBFM IFR (3/3 d), KCRE LIFR (3/3 d), KCRG IFR (3/3 d), KDAB VFR (3/3 d), KECP IFR (3/3 d), KFIN VFR (3/3 d), KGKT LIFR (3/3 d), KGPT LIFR (3/3 d), KHPN VFR (3/3 d), KHSa LIFR (3/3 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 39 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 39 of 39 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- CWA 502 — TS over ZJX (Jacksonville): contains KCRE, KMYR, KHXD, KJZI, KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSSI 15 NM, KCRG 63 NM, KSGJ 83 NM. valid 2026-10-03 22:07Z to 2026-10-04 00:07Z.
- G-AIRMET ZULU — ICE: contains KROA, KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 10 NM, KGKT 10 NM, KLZU 27 NM, KSHD 27 NM, KCRE 73 NM, KMYR 81 NM. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- G-AIRMET SIERRA — IFR: contains KTRI, KSHD, KAVL, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRE 9 NM, KMYR 14 NM, KGKT 26 NM, KJZI 63 NM, KLZU 77 NM, KHXD 86 NM, KSAV 90 NM. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- G-AIRMET SIERRA — IFR: contains KECP, KJKA, KHSA, KPNS, KBFM, KGPT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KNEW 8 NM. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KLZU, KSHD, KROA, KAVL, KGKT, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring). valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- G-AIRMET TANGO — TURB-HI: contains KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KROA 0 NM, KGKT 8 NM, KSHD 26 NM, KAVL 39 NM. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- SIGMET 86E — CONVECTIVE: contains KFIN, KSSI, KSGJ, KCRG (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KDAB 0 NM, KSAV 35 NM, KTPF 47 NM, KHXD 49 NM, KSPG 60 NM, KSRQ 77 NM, KECP 91 NM, KJZI 92 NM, KVNC 92 NM, KLZU 96 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- SIGMET 89E — CONVECTIVE: contains KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 4 NM, KTRI 49 NM, KGKT 54 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- SIGMET 68C — CONVECTIVE: contains KJKA, KBFM, KGPT, KHSA, KNEW (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KPNS 6 NM, KECP 74 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- CWA 402 — TS over ZMA (Miami): boundary within 100 NM of KVNC 1 NM, KSRQ 20 NM, KSPG 42 NM, KTPF 51 NM, KOPF 85 NM. valid 2026-10-03 22:53Z to 2026-10-04 00:00Z.
- CWA 103 — TS over ZMA (Miami): boundary within 100 NM of KDAB 42 NM, KFIN 50 NM, KSGJ 61 NM, KCRG 79 NM. valid 2026-10-03 23:01Z to 2026-10-04 00:00Z.
- CWA 304 — TS over ZMA (Miami): boundary within 100 NM of KOPF 49 NM. valid 2026-10-03 22:35Z to 2026-10-04 00:35Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KOPF 32 NM, KSPG 58 NM, KSRQ 61 NM, KTPF 67 NM, KVNC 69 NM, KECP 78 NM, KLZU 98 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 29 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KHSA 11 NM, KGPT 21 NM, KNEW 29 NM, KBFM 72 NM, KJKA 94 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-03 20:45Z to 2026-10-04 03:00Z.
- SIGMET 87E — CONVECTIVE: boundary within 100 NM of KOPF 64 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- SIGMET 88E — CONVECTIVE: boundary within 100 NM of KFIN 38 NM, KSGJ 42 NM, KDAB 44 NM, KCRG 59 NM, KJZI 69 NM, KHXD 73 NM, KSSI 76 NM, KSAV 93 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- SIGMET 90E — CONVECTIVE: boundary within 100 NM of KCRE 34 NM, KMYR 40 NM, KAVL 60 NM, KJZI 85 NM, KTRI 92 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- SIGMET 91E — CONVECTIVE: boundary within 100 NM of KOPF 53 NM, KVNC 69 NM, KSRQ 77 NM, KTPF 85 NM, KSPG 89 NM, KDAB 92 NM. valid 2026-10-03 22:55Z to 2026-10-04 00:55Z.
- 20 of 39 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 12, G-AIRMET 22, CWA 5; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMS

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-03T23:13:56.285421+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 9 of 20 current NOTAMs are new by that baseline — 10/001 (OBSTRUCTION, last_updated_at 2026-10-01T08:11:00+00:00); A0368/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0369/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0370/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0371/26 (OTHER, last_updated_at 2026-10-02T17:11:00+00:00); A0372/26 (OTHER, last_updated_at 2026-10-02T17:14:00+00:00); 10/005 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0373/26 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0375/26 (OTHER, last_updated_at 2026-10-02T23:37:00+00:00).
- No service-status wording was found in the published text of the 20 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
