Evidence & limitations

- METAR source state: ok; observed Oct 23 05:56 ET; retrieved Oct 23 07:29 ET; 93 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.19 inHg.
- Raw METAR: `METAR KLZU 230956Z AUTO 07004KT 10SM CLR 09/08 A3019 RMK AO2 SLP229 T00940083 $`
- KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 070 degrees true, 076 degrees magnetic,

at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. Wind source: KLZU METAR 230956Z.

EXTENDED OUTLOOK SUMMARY

Issued at 317 AM EDT Fri Oct 23 2026

As has been the case for quite some time, the forecast through the end of next week remains on the quiet side.

SHORT TERM

..
(Today through Saturday)
Issued at 317 AM EDT Fri Oct 23 2026

The benign weather pattern continues with high pressure solidly over the area. As a result near zero rain chances continue through the weekend with mostly clear skies across the area. Also expecting temperatures right around normal for this time of year with highs in the upper 60s to low 70s and overnight lows in the mid to upper 40s. Temperatures on Saturday will be slightly cooler with a wedge of cooler air setting up. Highs Saturday will top out in the upper 60s as a result. Main concern will continue to be fire weather with dry air in place. Relative humidity values at 25% or less are expected over central Georgia this afternoon and evening which has resulted in a fire danger statement. Although conditions remain dry on Saturday, slightly higher dewpoints are likely to keep relative humidity values outside of critical thresholds.

LONG TERM

..
(Saturday night through Thursday)
Issued at 317 AM EDT Fri Oct 23 2026

As has been the case for quite some time, the forecast through the end of next week remains on the quiet side. Precipitation chances will remain nil as high pressure will dominate and indications of more substantial opportunities for rain staying just beyond the end of the current forecast period.

In the meantime, a CAD wedge will be the dominant feature through the weekend while the surface high will migrate southward into early next week. Thus, cooler temperatures early in the week will gradually modify and warm from mid-to-late week. All this means is early week temperatures will creep from near to slightly below normal to a few degrees above normal. Meanwhile, the upper pattern becomes much less amplified and begins to transition to a more southwesterly flow by the end of the week, potentially leading into a wetter pattern headed into November.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 1% · wind 4 kt · 43°F; 20:00 ET sky clear · PoP12 0% · TS12 1% · wind 12 kt · 54°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 23 05:53 ET; retrieved Oct 23 07:29 ET; 96 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 340 degrees true, 347 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 7% · TS12 2% · wind 13 kt · 59°F; 20:00 ET sky partly cloudy · PoP12 7% · TS12 2% · wind 16 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- METAR source state: ok; observed Oct 23 05:35 ET; retrieved Oct 23 07:29 ET; 114 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 340 degrees true, 347 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 16% · wind 19 kt · 65°F; 20:00 ET sky ovc · PoP12 17% · TS12 13% · wind 20 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 13%, 12 h precipitation probability 17%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 23 05:35 ET; retrieved Oct 23 07:29 ET; 114 min before this run.
- Measured values read from the KJZI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 350 degrees true, 358 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 11% · TS12 4% · wind 12 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 3% · wind 17 kt · 67°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 4%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 23 05:53 ET; retrieved Oct 23 07:29 ET; 96 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.15 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 360 degrees true, 009 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 230953Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 11% · TS12 1% · wind 13 kt · 61°F; 20:00 ET sky partly cloudy · PoP12 11% · TS12 2% · wind 16 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 23 05:53 ET; retrieved Oct 23 07:29 ET; 96 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.14 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 020 degrees true, 029 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 11% · TS12 1% · wind 13 kt · 60°F; 20:00 ET sky partly cloudy · PoP12 11% · TS12 2% · wind 17 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 23 05:35 ET; retrieved Oct 23 07:29 ET; 114 min before this run.
- Measured values read from the KHXD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 360 degrees true, 008 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 03. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 12% · TS12 5% · wind 17 kt · 64°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 4% · wind 17 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 5%, 12 h precipitation probability 12%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 1% · wind 1 kt · 40°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 3 kt · 55°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 23 05:54 ET; retrieved Oct 23 07:29 ET; 95 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.28 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 270 degrees true, 279 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 4 kt · 44°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 6 kt · 57°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 23 05:56 ET; retrieved Oct 23 07:29 ET; 93 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 030 degrees true, 037 degrees magnetic, at 12 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 02. Wind source: KSGJ METAR 230956Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 23 05:53 ET; retrieved Oct 23 07:29 ET; 96 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 350 degrees true, 357 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KCRG METAR 230953Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 26% · wind 18 kt · 68°F; 20:00 ET sky ovc · PoP12 24% · TS12 26% · wind 20 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 26%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 23 05:35 ET; retrieved Oct 23 07:29 ET; 114 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 300 degrees true, 307 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 60% · wind 17 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 44% · wind 19 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 2 kt · 36°F; 20:00 ET sky clear · PoP12 1% · TS12 0% · wind 4 kt · 51°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 8 kt · 57°F; 20:00 ET sky clear · PoP12 1% · TS12 0% · wind 14 kt · 67°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 23 05:53 ET; retrieved Oct 23 07:29 ET; 96 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 030 degrees true, 032 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 230953Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 2% · TS12 0% · wind 8 kt · 59°F; 20:00 ET sky clear · PoP12 2% · TS12 0% · wind 12 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 23 05:53 ET; retrieved Oct 23 07:29 ET; 96 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 300 degrees true, 307 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 25%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

- **Sat, Oct 24 · 18:00–00:00 ET**: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Sun, Oct 25 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 61% · TS12 25% · wind 19 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 51% · TS12 32% · wind 21 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 25%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Oct 26 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 45% · TS12 21% · wind 18 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 20% · wind 19 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 21%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- METAR source state: ok; observed Oct 23 05:35 ET; retrieved Oct 23 07:29 ET; 114 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 010 degrees true, 012 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. - **Sun, Oct 25 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 6 kt · 55°F; 20:00 ET sky clear · PoP12 2% · TS12 0% · wind 12 kt · 66°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Oct 26 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. Land runways drawn: 14/32, 18/36. Wind from 320 degrees true, 322 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. 2026-10-23T11:30:02.899154Z.

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- **Sun, Oct 25 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 5 kt · 55°F; 20:00 ET sky clear · PoP12 4% · TS12 0% · wind 13 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · TS12 3% · wind 20 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 20% · TS12 3% · wind 22 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 3%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · TS12 4% · wind 13 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 3% · wind 19 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 4%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · TS12 3% · wind 13 kt · 70°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 4% · wind 18 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 3%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 13% · TS12 3% · wind 13 kt · 70°F; 20:00 ET sky partly cloudy · PoP12 36% · TS12 5% · wind 22 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 3%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

PRECIP CHANCE 1%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · wind 4 kt; 20:00 ET sky clear · PoP12 4% · wind 10 kt. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · wind 4 kt; 20:00 ET sky clear · PoP12 4% · wind 8 kt. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 32% · wind 12 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 40% · TS12 20% · wind 19 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 32%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

• METAR source state: ok; observed Oct 23 05:56 ET; retrieved Oct 23 07:29 ET; 93 min before this run.

• Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.25 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 330 degrees true, 343 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 230956Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 2% · TS12 0% · wind 4 kt · 42°F; 20:00 ET sky clear · PoP12 3% · TS12 0% · wind 5 kt · 51°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 2% · TS12 0% · wind 2 kt · 34°F; 20:00 ET sky clear · PoP12 3% · TS12 0% · wind 6 kt · 50°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 2 SIGMET records, 42 G-AIRMET records, 2 CWA records. Regional current observations (not corridor forecasts): Atlantic North: category unavailable at KMYR; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 23 – Mon Oct 26, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 4 active trip days in Fri Oct 23 – Mon Oct 26, 2026 carry a forecast flight category and 2 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Oct 23, 06:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sat Oct 24, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- Sun Oct 25, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Oct 26, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL VFR (2/4 d), KBED VFR (2/4 d), KBFM VFR (2/4 d), KCRE VFR (2/4 d), KCRG VFR (2/4 d), KDAB VFR (2/4 d), KECP VFR (2/4 d), KFIN VFR (2/4 d), KGKT VFR (2/4 d), KGPT VFR (2/4 d), KHPN VFR (2/4 d), KHSA VFR (2/4 d); 17 further airports in section 2.

- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 46 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 46 of 46 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- CWA 102 — TS over ZMA (Miami): boundary within 100 NM of KOPF 23 NM. valid 2026-10-23 11:12Z to 2026-10-23 12:15Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KCRG 4 NM, KTRI 17 NM, KAVL 20 NM, KSGJ 25 NM, KECP 44 NM, KSSI 45 NM, KFIN 54 NM, KSAV 58 NM, KGKT 70 NM, KDAB 70 NM, KHXD 84 NM, KLZU 85 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-23 09:54Z to 2026-10-23 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KHPN 1 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-23 09:54Z to 2026-10-23 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 68 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-23 09:54Z to 2026-10-23 15:00Z.
- G-AIRMET TANGO — TURB-HI: boundary within 100 NM of KNEW 12 NM, KGPT 54 NM, KBFM 99 NM. valid 2026-10-23 10:31Z to 2026-10-23 15:00Z.
- G-AIRMET TANGO — TURB-LO: boundary within 100 NM of KBED 39 NM. valid 2026-10-23 10:31Z to 2026-10-23 15:00Z.
- 40 of 46 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 2, G-AIRMET 42, CWA 2; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 · New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-23T11:29:52.773445+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 7 of 16 current NOTAMs are new by that baseline — 10/030 (AIRSPACE_FDC, last_updated_at 2026-10-21T13:08:00+00:00); A0401/26 (RUNWAY, last_updated_at 2026-10-21T20:19:00+00:00); 10/031 (RUNWAY, last_updated_at 2026-10-21T20:43:00+00:00); A0402/26 (RUNWAY, last_updated_at 2026-10-21T20:43:00+00:00); 10/033 (RUNWAY, last_updated_at 2026-10-22T13:11:00+00:00); A0403/26 (RUNWAY, last_updated_at 2026-10-22T13:11:00+00:00); A0405/26 (RUNWAY, last_updated_at 2026-10-22T13:22:00+00:00).
- No service-status wording was found in the published text of the 16 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
