METAR – issued hourly. The SPECI report is issued by aviation weather observers at KLZU observations describes the current conditions now, not this trip day.

TAF – The National Weather Service issues TAFs for the contiguous United States and Alaska. TAFs are issued four times a day (0000, 0600, 1200, and 1800 UTC) and are valid for a period of 24 hours. TAFs are issued for the contiguous United States and Alaska. TAFs are issued for the contiguous United States and Alaska. TAFs are issued for the contiguous United States and Alaska.

NWS hour – Weather Service hourly forecasts are issued four times a day (0000, 0600, 1200, and 1800 UTC) and are valid for a period of 24 hours. NWS hourly forecasts are issued for the contiguous United States and Alaska. NWS hourly forecasts are issued for the contiguous United States and Alaska.

NWS day/night – Weather Service day and night forecasts are issued four times a day (0000, 0600, 1200, and 1800 UTC) and are valid for a period of 24 hours. NWS day/night forecasts are issued for the contiguous United States and Alaska. NWS day/night forecasts are issued for the contiguous United States and Alaska.

GFS Model – The Global Forecast System (GFS) is a numerical weather prediction model developed by the National Centers for Environmental Prediction. The GFS is a global model that covers the entire globe. The GFS is a global model that covers the entire globe.

GFS ensemble – The GFS ensemble is a collection of multiple GFS forecasts. The GFS ensemble is a collection of multiple GFS forecasts. The GFS ensemble is a collection of multiple GFS forecasts.

GFA and GFS – The GFA and GFS are both global forecast models. The GFA and GFS are both global forecast models. The GFA and GFS are both global forecast models.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

- NWS-day
- MAV
- MEX
- GFA
- NOTAM

METAR — issued hourly. The highest visibility, wind, and temperature are reported. Issued by the National Weather Service (NWS) and the FAA. Not a forecast. KLZU observations describe the current weather.

TAF — The National Weather Service (NWS) issues a forecast of weather conditions for a specific time and location. It includes information on wind, visibility, and precipitation. TAFs are issued by the NWS and the FAA. The forecast is based on the latest available information and is updated as needed.

NWS hour — The National Weather Service (NWS) issues a forecast of weather conditions for a specific time and location. It includes information on wind, visibility, and precipitation. TAFs are issued by the NWS and the FAA. The forecast is based on the latest available information and is updated as needed.

NWS day/night — The National Weather Service (NWS) issues a forecast of weather conditions for a specific time and location. It includes information on wind, visibility, and precipitation. TAFs are issued by the NWS and the FAA. The forecast is based on the latest available information and is updated as needed.

GFS M — The Global Forecast System (GFS) is a numerical weather prediction model. It is used by the NWS to produce weather forecasts. The GFS is a global model, meaning it covers the entire globe. It is updated every six hours.

GFS ex — The Global Forecast System (GFS) is a numerical weather prediction model. It is used by the NWS to produce weather forecasts. The GFS is a global model, meaning it covers the entire globe. It is updated every six hours.

GFA and — The Global Forecast System (GFS) is a numerical weather prediction model. It is used by the NWS to produce weather forecasts. The GFS is a global model, meaning it covers the entire globe. It is updated every six hours.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interpret them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

EXTENDED OUTLOOK SUMMARY

.. (Today through Sunday)
Issued at 322 AM EDT Sat Oct 3 2026

It's feeling decidedly not fall-like this morning amid
temperatures and dewpoints in the 70s during the predawn hours. — .. (Sunday night through Friday)
Issued at 322 AM EDT Sat Oct 3 2026

By Sun night The main frontal boundary across North GA finally begins
making its way southward through the state.

SHORT TERM

..
(Today through Sunday)
Issued at 322 AM EDT Sat Oct 3 2026

It's feeling decidedly not fall-like this morning amid
temperatures and dewpoints in the 70s during the predawn hours.
Earlier showers have largely dissipated, but this will be fairly
short-lived as additional scattered showers and a few storms will
develop through the day. Coverage today will be a bit higher than
on Friday as the surface front sags into far northwest Georgia.
Still, coverage through the day will remain of the scattered
variety, though locally heavy rainfall will be possible given
anomalously high PWATs ~2". Despite increased coverage, many areas
will experience some dry time through the day, and well-above-
normal highs in the mid to upper 80s can again be expected.

Enjoy any dry weather today because Sunday will bring a washout for
most with widespread moderate to occasionally heavy rainfall
expected. This will come as a shortwave rides along the nearly
stationary front that will bisect north Georgia. CAMs are in good
agreement that rainfall will overspread the area, especially by
afternoon and evening as the wave lifts northeastward leading into
Sunday night, at which point its associated weak surface low will
slowly skirt along the northern Gulf coast. PWATs will surge
further above 2", likely at or above daily climatological maximums

for the date, providing plenty of fuel for heavy rainfall. While the highest totals will be situated along the immediate Gulf Coast in tandem with the aforementioned surface low track, widespread 1-3" rainfall totals are likely for the bulk of our area. The highest totals are favored along and south of the I-85 corridor where a few instances of rainfall totals in the 3-4+" range would be possible from Sunday into Monday. WPC continues to highlight a "Slight" Enhanced Rainfall Outlook for these areas for Day 2 where localized instances of flash flooding would be most favored. Highs on Sunday will trend cooler given widespread rainfall as well as a weak CAD edging into north Georgia keeping temperatures in the 70s for most with the exception of parts of Middle Georgia.

LONG TERM

..
(Sunday night through Friday)
Issued at 322 AM EDT Sat Oct 3 2026

By Sun night The main frontal boundary across North GA finally begins making its way southward through the state. This front stalls again across N FL/S GA Mon night with precip chances staying elevated across central GA through Wed night. Currently seeing precip totals in the 2" to 4" range across central GA and 1 to 3 inches across North GA through Day 6. Due to the limited amount of precipitation we have seen over the past few weeks, central GA can handle a bit more rain than north GA but 2" to 4.5" is still a lot of water in just 5 days. Will still need to keep a close eye on the flooding potential across the area. Another marginal risk is out for Mon as well for excessive rain across central and south GA. Still not seeing much in the way of instability across the area but we could still see some thunderstorms. SPC only has us under a general risk of severe through Sun which continues to look good.

By daybreak Tue the frontal boundary will be south of the area with a cooler/drier airmass filtering into the state from the north. Day time highs will be mainly in the 70s across the area Mon through Thu.

Area Forecast Discussion
National Weather Service Peachtree City GA
331 AM EDT Sat Oct 3 2026

...Morning Area Forecast Discussion...

.KEY MESSAGES...

- Scattered showers and thunderstorms are expected this afternoon and evening before widespread rainfall overspreads the area on Sunday.

- The potential for heavy rainfall and localized flash flooding

peaks from Sunday into Monday with highest rainfall totals currently favored along and south of the I-85 corridor.

- Temperatures trend more fall-like next week in the wake of a cold front.

&&

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:54 ET; retrieved Oct 3 06:27 ET; 93 min before this run.
- Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 160 degrees true, 167 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 17 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 030854Z.

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND3–8 kt

TEMPERATURE61–66 °F

PRECIP CHANCE50%

TS CHANCE23%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 50% · TS12 23% · wind 3 kt · 61°F; 20:00 ET sky ovc · PoP12 31% · TS12 3% · wind 8 kt · 66°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 23%, 12 h precipitation probability 50%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

48 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

GFS MEX - IFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND5–8 kt

TEMPERATURE72 °F

PRECIP CHANCE91%

TS CHANCE34%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 91% · TS12 34% · wind 5 kt · 72°F; 20:00 ET sky ovc · PoP12 93% · TS12 17% · wind 8 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 91%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Oct 4 · 00:00–06:00 ET ET · MVFR
- Sun, Oct 4 · 06:00–12:00 ET ET · MVFR
- Sun, Oct 4 · 12:00–18:00 ET ET · MVFR

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · MVFR

00 ET ET · MVFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

• Sun, Oct 4 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR

• Mon, Oct 5 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 91% · TS12 33% · wind 3 kt · 69°F; 20:00 ET sky ovc · PoP12 93% · TS12 26% · wind 8 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 33%, 12 h precipitation probability 91%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:40 ET; retrieved Oct 3 06:27 ET; 107 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 320 degrees true, 329 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 030840Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND5–9 kt

TEMPERATURE69–70 °F

PRECIP CHANCE92%

TS CHANCE31%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 92% · TS12 31% · wind 5 kt · 69°F; 20:00 ET sky ovc · PoP12 85% · TS12 25% · wind 9 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 92%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-10-03T10:27:40.441072Z.

+ Forecast evidence

METAR

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KMYR observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- Sun, Oct 4 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR
- Mon, Oct 5 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 92% · TS12 31% · wind 5 kt · 69°F; 20:00 ET sky ovc · PoP12 85% · TS12 25% · wind 9 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 92%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:35 ET; retrieved Oct 3 06:27 ET; 112 min before this run.
- Measured values read from the KHxD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

MEX

GFS MEX - IFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND4–8 kt

TEMPERATURE70–71 °F

PRECIP CHANCE91%

TS CHANCE34%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 91% · TS12 34% · wind 4 kt · 70°F; 20:00 ET sky ovc · PoP12 94% · TS12 18% · wind 8 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 91%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMS were read for KHXD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

• Sun, Oct 4 • 18:00-00:00 ET: GFS MAV MOS • 18:00-00:00 ET ET • LIFR

- **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 91% · TS12 34% · wind 4 kt · 70°F; 20:00 ET sky ovc · PoP12 94% · TS12 18% · wind 8 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 91%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND2–6 kt

TEMPERATURE59–64 °F

PRECIP CHANCE40%

TS CHANCE25%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 25% · wind 2 kt · 59°F; 20:00 ET sky partly cloudy · PoP12 20% · TS12 8% · wind 6 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 25%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

- 0 ET ET · IFR
- 0 ET ET · IFR

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:54 ET; retrieved Oct 3 06:27 ET; 93 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 010 degrees true, 019 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 030854Z.

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND4–8 kt

TEMPERATURE59–69 °F

PRECIP CHANCE23%

TS CHANCE9%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 23% · TS12 9% · wind 4 kt · 59°F; 20:00 ET sky clear · PoP12 6% · TS12 1% · wind 8 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 9%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND6–8 kt

TEMPERATURE72–75 °F

PRECIP CHANCE77%

TS CHANCE38%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 77% · TS12 38% · wind 6 kt · 72°F; 20:00 ET sky ovc · PoP12 79% · TS12 29% · wind 8 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 77%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSGJ this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 100 degrees true, 107 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KCRG METAR 030853Z.

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND4–8 kt

TEMPERATURE72–75 °F

PRECIP CHANCE76%

TS CHANCE38%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 76% · TS12 38% · wind 4 kt · 72°F; 20:00 ET sky ovc · PoP12 80% · TS12 26% · wind 8 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 76%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

...ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

- **Sun, Oct 4 · 18:00–00:00 ET**: GFS MAV MOS · 18:00–00:00 ET ET · IFR
- **Mon, Oct 5 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 76% · TS12 38% · wind 4 kt · 72°F; 20:00 ET sky ovc · PoP12 80% · TS12 26% · wind 8 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 76%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND4–6 kt

TEMPERATURE72–75 °F

PRECIP CHANCE72%

DEWPOINT72 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 72% · wind 4 kt · 72°F; 20:00 ET sky ovc · PoP12 77% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h precipitation probability 72%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND

1–6 kt

TEMPERATURE

62–68 °F

PRECIP CHANCE

43%

DEWPOINT

62 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · wind 1 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 25% · wind 6 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Oct 4 • 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · LIFR
- Mon, Oct 5 • **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · wind 1 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 25% · wind 6 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:35 ET; retrieved Oct 3 06:27 ET; 112 min before this run.
- Measured values read from the KSHD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.17 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 030 degrees true, 040 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KSHD METAR 030835Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND1–7 kt

TEMPERATURE51–61 °F

PRECIP CHANCE14%

TS CHANCE3%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 14% · TS12 3% · wind 1 kt · 51°F; 20:00 ET sky clear · PoP12 5% · TS12 0% · wind 7 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

1 additional normalized FAA NOTAM record omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSHD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · MVFR
00 ET ET · MVFR
00 ET ET · MVFR
00 ET ET · MVFR
06:00–12:00 ET ET · LIFR
12:00–18:00 ET ET · LIFR

• Sun, Oct 4 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · LIFR

- **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 14% · TS12 3% · wind 1 kt · 51°F; 20:00 ET sky clear · PoP12 5% · TS12 0% · wind 7 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

DEWPOINT23 °C

Wind favours RWY 08

080° true · 082° magnetic · 6 kt · also NOTAM-affected: 08 and 26

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:32 ET; retrieved Oct 3 06:27 ET; 115 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 080 degrees true, 082 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 030832Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND6–9 kt

TEMPERATURE75–78 °F

PRECIP CHANCE75%

TS CHANCE32%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 75% · TS12 32% · wind 6 kt · 75°F; 20:00 ET sky ovc · PoP12 40% · TS12 29% · wind 9 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 32%, 12 h precipitation probability 75%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Oct 4 • 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR

• Mon, Oct 5 • Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 75% · TS12 32% · wind 6 kt · 75°F; 20:00 ET sky ovc · PoP12 40% · TS12 29% · wind 9 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 32%, 12 h precipitation probability 75%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

+ Forecast evidence

METAR	
METAR — the routine surface observation issued hourly by the reporting station, with	
TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.	
GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against	
GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in	
GFA and prog charts — the Graphical Forecast for Aviation and the Weather	
FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and	ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published VFR Surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- 00 ET ET · VFR
- 00 ET ET · VFR
- 00 ET ET · VFR
- 00 ET ET · VFR
- 06:00–12:00 ET ET · VFR
- Sun, Oct 4 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Oct 4 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- Mon, Oct 5 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 66% · TS12 33% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 75% · TS12 32% · wind 7 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 33%, 12 h precipitation probability 66%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:35 ET; retrieved Oct 3 06:27 ET; 112 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 070 degrees true, 072 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJKA METAR 030835Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 68%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 100 degrees true, 102 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KBFM METAR 030853Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND7–11 kt

TEMPERATURE76–78 °F

PRECIP CHANCE53%

TS CHANCE29%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 29% · wind 7 kt · 76°F; 20:00 ET sky ovc · PoP12 36% · TS12 17% · wind 11 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

RUNWAY

AD477126 — AD477126 NOTAMC AD264126 Q) KZHUQPRXK0000555000TH0000R0005 A) KBFM B) 2010021629 E) IAP MOBILE INTL MOBILE AL VOR RMY 18 AMDT 18 ONE REQUIRED ENCL CANCELED

Effective 2026-10-02T16:29:00Z → 2026-10-05T16:29:00Z

181 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · MVFR

0 ET ET · IFR

0 ET ET · IFR

00 ET ET · IFR

06:00–12:00 ET ET · LIFR

12:00–18:00 ET ET · IFR

• Sun, Oct 4 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR

• Mon, Oct 5 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 29% · wind 7 kt · 76°F; 20:00 ET sky ovc · PoP12 36% · TS12 17% · wind 11 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 050 degrees true, 051 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KGPT METAR 030853Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

NAV_APPROACH

22 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Oct 4 • 18:00–00:00 ET: GFS MAV MOS • 18:00–00:00 ET ET • MVFR

• Mon, Oct 5 • **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 38% · TS12 29% · wind 6 kt · 74°F; 20:00 ET sky ovc · PoP12 27% · TS12 7% · wind 11 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 38%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 100 degrees true, 106 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. Wind source: KSPG METAR 030853Z.

(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND5–7 kt

 TEMPERATURE80–83 °F

 PRECIP CHANCE63%

 TS CHANCE27%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 63% · TS12 27% · wind 5 kt · 80°F; 20:00 ET sky ovc · PoP12 69% · TS12 30% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:35 ET; retrieved Oct 3 06:27 ET; 112 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 090 degrees true, 096 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KTPF METAR 030835Z.

MON, OCT 5

MON 5 OCT Whole day COARSE

Predicted

WIND2–5 kt

TEMPERATURE79–81 °F

PRECIP CHANCE64%

TS CHANCE29%

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 64% · TS12 29% · wind 2 kt · 79°F; 20:00 ET sky ovc · PoP12 71% · TS12 29% · wind 5 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 64%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 100 degrees true, 106 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KSRQ METAR 030853Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND4–9 kt

TEMPERATURE78–81 °F

PRECIP CHANCE58%

TS CHANCE25%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 58% · TS12 25% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 60% · TS12 30% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 30%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:35 ET; retrieved Oct 3 06:27 ET; 112 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 080 degrees true, 086 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 030835Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND4–9 kt

TEMPERATURE78–81 °F

PRECIP CHANCE53%

TS CHANCE31%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 31% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 48% · TS12 28% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

0 ET ET · VFR

0 ET ET · MVFR

0 ET ET · MVFR

00 ET ET · VFR

06:00–12:00 ET ET · VFR

• Sun, Oct 4 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Oct 4 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Oct 5 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 31% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 48% · TS12 28% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

GFS
MEX

Overcast

WIND5–7 kt

PRECIP CHANCE35%

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 35% · wind 5 kt; 20:00 ET sky ovc · PoP12 24% · wind 7 kt. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 110 degrees true, 111 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KNEW METAR 030853Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KNEW this run.

published WPC surface chart matches this period and is shown in the dropdown with its

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · IFR

00 ET ET · IFR

00 ET ET · IFR

00 ET ET · IFR

06:00–12:00 ET ET · LIFR

12:00–18:00 ET ET · MVFR

issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 35% · TS12 27% · wind 11 kt · 75°F; 20:00 ET sky ovc · PoP12 24% · TS12 5% · wind 11 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:53 ET; retrieved Oct 3 06:27 ET; 94 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 120 degrees true, 127 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 12. Wind source: KOPF METAR 030853Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND7–9 kt

TEMPERATURE78–81 °F

PRECIP CHANCE39%

TS CHANCE29%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 39% · TS12 29% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 25% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 29%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-10-03T10:27:42.151153Z.

90 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

• Sun, Oct 4 • 18:00–00:00 ET: GFS MAV MOS • 18:00–00:00 ET ET • VFR

• **Mon, Oct 5 • Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 06:00 ET sky clear · PoP12 39% · TS12 29% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 25% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted VFR from sky cover clear, 12 h thunderstorm probability 29%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

330° true · 343° magnetic · 9 kt · also NOTAM-affected: 16 and 34

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:56 ET; retrieved Oct 3 06:27 ET; 91 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 330 degrees true, 343 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 030856Z.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 24% · TS12 2% · wind 4 kt · 56°F; 20:00 ET sky clear · PoP12 3% · TS12 1% · wind 16 kt · 56°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 2%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

• Sun, Oct 4 · 18:00–00:00 ET · GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Oct 5 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 24% · TS12 2% · wind 4 kt · 56°F; 20:00 ET sky clear · PoP12 3% · TS12 1% · wind 16 kt · 56°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 2%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-10-03=GFS, 2026-10-04=GFS, 2026-10-05=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 3 04:51 ET; retrieved Oct 3 06:27 ET; 96 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 340 degrees true, 354 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 030851Z.

PRECIP CHANCE7%

TS CHANCE3%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 7% · TS12 3% · wind 4 kt · 56°F; 20:00 ET sky clear · PoP12 7% · TS12 1% · wind 13 kt · 56°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 4 SIGMET records, 39 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Mountain: IFR/LIFR at KGKT; Mountain: MVFR at KTRI, KSHD; Atlantic South: MVFR at KSSI; Atlantic South: category unavailable at KSGJ.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 030856Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 61/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 1/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=4, G-AIRMET=39, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=1000; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: unavailable this run.

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. Trip-window feasibility evidence (Derived): 2 of 3 active trip days carry a forecast flight category and 1 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather. A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 44 hazard areas retained a coordinate ring this run, 44 of them valid inside the trip window, by the geometric test named below.
- KLZU: 11 of 22 current NOTAMs are new by the stated 72-hour publication window. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Oct 2 – Mon Oct 5, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather.
- Sat Oct 3, 06:00–22:00 ET: IFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Oct 4, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from MOS.
- Mon Oct 5, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/3 d), KBED VFR (2/3 d), KBFM LIFR (2/3 d), KCRE LIFR (2/3 d), KCRG IFR (2/3 d), KDAB VFR (2/3 d), KECP LIFR (2/3 d), KFIN VFR (2/3 d), KGKT LIFR (2/3 d), KGPT LIFR (2/3 d), KHPN VFR (2/3 d), KHSa LIFR (2/3 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 44 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 28 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 44 of 44 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- CWA 101 — IFR over ZTL (Atlanta): contains KTRI, KGKT, KAVL, KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KROA 30 NM, KSAV 49 NM, KHxD 72 NM, KSSI 79 NM, KECP 95 NM, KSHD 98 NM, KJZI 98 NM. valid 2026-10-03 10:07Z to 2026-10-03 12:00Z.
- G-AIRMET ZULU — ICE: contains KGKT, KTRI, KROA, KSHD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 28 NM, KLZU 83 NM. valid 2026-10-03 08:45Z to 2026-10-03 15:00Z.
- G-AIRMET SIERRA — IFR: contains KROA, KGKT, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 12 NM, KSHD 15 NM, KLZU 59 NM. valid 2026-10-03 09:09Z to 2026-10-03 15:00Z.
- G-AIRMET SIERRA — IFR: contains KCRE (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KMYR 4 NM, KJZI 83 NM. valid 2026-10-03 09:09Z to 2026-10-03 15:00Z.
- G-AIRMET SIERRA — IFR: contains KTPF, KSSI, KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSPG 9 NM, KLZU 12 NM, KHxD 15 NM, KCRG 16 NM, KPNS 27 NM, KSRQ 29 NM, KFIN 36 NM, KECP 37 NM, KBFM 38 NM, KJKA 40 NM, KDAB 43 NM, KVNC 47 NM, KJZI 52 NM, KAVL 83 NM, KGPT 91 NM. valid 2026-10-03 09:09Z to 2026-10-03 15:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KAVL, KROA, KTRI, KGKT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KLZU 61 NM. valid 2026-10-03 09:09Z to 2026-10-03 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 38 NM, KHPN 99 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-03 08:45Z to 2026-10-03 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KPNS 12 NM, KJKA 39 NM, KECP 42 NM, KBFM 48 NM, KGPT 91 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-03 08:45Z to 2026-10-03 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 97 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-03 08:45Z to 2026-10-03 15:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KHPN 21 NM, KBED 48 NM. valid 2026-10-03 08:45Z to 2026-10-03 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 51 NM. valid 2026-10-03 09:09Z to 2026-10-03 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBFM 14 NM, KGPT 17 NM, KPNS 37 NM, KNEW 38 NM, KJKA 39 NM, KECP 92 NM. valid 2026-10-03 09:09Z to 2026-10-03 15:00Z.
- G-AIRMET ZULU — M_FZLVL: boundary within 100 NM of KBED 74 NM. valid 2026-10-03 08:45Z to 2026-10-03 15:00Z.
- SIGMET 18E — CONVECTIVE: boundary within 100 NM of KSRQ 19 NM, KSPG 21 NM, KVNC 31 NM, KTPF 33 NM, KECP 78 NM. valid 2026-10-03 09:55Z to 2026-10-03 11:55Z.
- SIGMET 19E — CONVECTIVE: boundary within 100 NM of KOPF 6 NM, KDAB 39 NM, KFIN 56 NM, KTPF 76 NM, KSPG 88 NM, KVNC 88 NM, KSRQ 90 NM. valid 2026-10-03 09:55Z to 2026-10-03 11:55Z.
- 29 of 44 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 4, G-AIRMET 39, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-03T10:27:34.015317+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.

- KLZU: 11 of 22 current NOTAMs are new by that baseline — A0365/26 (OTHER, last_updated_at 2026-09-30T19:29:00+00:00); 10/001 (OBSTRUCTION, last_updated_at 2026-10-01T08:11:00+00:00); 10/003 (OBSTRUCTION, last_updated_at 2026-10-01T15:11:00+00:00); A0368/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0369/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0370/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0371/26 (OTHER, last_updated_at 2026-10-02T17:11:00+00:00); A0372/26 (OTHER, last_updated_at 2026-10-02T17:14:00+00:00); 10/005 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0373/26 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0375/26 (OTHER, last_updated_at 2026-10-02T23:37:00+00:00).
- No service-status wording was found in the published text of the 22 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
