⚠ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

METAR – issued hourly. The NWS issues a SPECI report if conditions change significantly. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

TAF – highest forecast. The NWS issues a TAF for the next 24 hours. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

NWS hour – Weather Service hourly forecast. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

NWS day/night – Weather Service day and night forecast. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

GFS MOS – Global Forecast System Model output. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

GFS extended – Global Forecast System Model output. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

GFA – Global Forecast System Model output. Issued by the NWS, not a forecast. KLZU observations describe current conditions.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

Evidence & limitations

- The visible badge names the contributing product. Exact issuance, retrieval, and member-period provenance remains in Day evidence & planning note below.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 4%, 12 h precipitation probability 9%, 12 h thunderstorm probability 7%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. It describes the whole trip day, not this row: MEX steps in twelve-hour blocks and the worst block is reported. Verify day-of against a TAF or short-range MOS.
- Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Tue Sep 8 · 12:00 AM ET.

METAR — issued hourly. The METAR contains current conditions: visibility, wind, temperature, dewpoint, and altimeter. Issued by the National Weather Service (NWS) at airports, not a forecast. KLZU obs describes current conditions.

TAF — highest forecast. The NWS issues a TAF for each airport. FM and TO times are given. TAFs are issued every 6 hours. The TAF describes conditions for the next 24 hours, not a forecast. KLZU obs describes current conditions.

NWS hour — Weather Service hourly forecast. The NWS issues a 6-hour forecast for each airport. FM and TO times are given. The forecast describes conditions for the next 6 hours, not a forecast. KLZU obs describes current conditions.

NWS day/night — Weather Service day and night forecast. The NWS issues a 12-hour forecast for each airport. FM and TO times are given. The forecast describes conditions for the next 12 hours, not a forecast. KLZU obs describes current conditions.

GFS MOS — Global Forecast System (GFS) Model Output Statistics (MOS). The GFS is a global model that provides a 6-hour forecast for each airport. FM and TO times are given. The forecast describes conditions for the next 6 hours, not a forecast. KLZU obs describes current conditions.

GFS extended range — Global Forecast System (GFS) Model Output Statistics (MOS). The GFS is a global model that provides a 12-hour forecast for each airport. FM and TO times are given. The forecast describes conditions for the next 12 hours, not a forecast. KLZU obs describes current conditions.

GFA and TFRs — Forecast of Adverse Conditions (GFA) and Terminal Forecast of Restricted Operations (TFRs). The GFA and TFRs are issued by the FAA and provide advisory evidence about the airport, not a forecast. KLZU obs describes current conditions.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not a forecast. KLZU obs describes current conditions.

SHORT TERM

..
(Today through Thursday)
Issued at 144 AM EDT Wed Sep 9 2026

A mid-level ridge will slide over the Southeast today, which will keep most of the area warm and rain-free. There will be a strong moisture gradient starting to develop across the area today, with lingering dry air in North GA, and moisture pushing into Central GA the southeast. By this afternoon, surface dewpoints will be in the low to mid 60s in North GA, with PWAT values around 1". Meanwhile, in Central GA, dewpoints will be in the low to mid 70s with PWAT values near 2". This amount of moisture could support isolated afternoon showers and weak storms, primarily for areas south and east of Macon. Temperatures will warm to the low 90s across the area, with higher heat index values in the upper 90s to near 100 in Central GA where the higher dewpoints are.

On Thursday, the mid-level ridge will slide off the east, with winds over the area turning out of the south. These southerly winds will push the moisture further north, resulting in isolated to scattered afternoon showers and storms as far north as the I-20 corridor. High temperatures will again be in the low to mid 90s, with heat index values in the upper 90s to low 100s across most of the area.

LONG TERM

..
(Friday through Tuesday)
Issued at 144 AM EDT Wed Sep 9 2026

The synoptic pattern over the area will start to shift on Friday, as the flow turns out of the southwest with a ridge off to the east, and troughing from the OH Valley down to the lower MS Valley. Moisture will begin to advect up across the area from the Gulf on Friday, supporting scattered to numerous showers and storms. High temperatures in the low to mid 90s and dewpoints in the low to mid 70s will drive peak heat index values into the 100-105 range across the area. By Saturday, higher moisture content (PWATs of 2-2.2") will spread across the entire area, with enhanced forcing from a trough over the TN Valley supporting more widespread showers and storms. While a few storms Friday and Saturday could be strong with gusty winds, we could also see a threat for localized flash flooding for any areas that are hit with repeated rounds of storms. Cloud cover may limit how warm temperatures get on Saturday, but generally expecting highs to reach the low 90s, with heat index values in the upper 90s to low 100s.

From Sunday through early next week, models are in generally good agreement on the mid-level ridge over the Atlantic retrograding back west over our area. Moisture content looks to remain above normal (PWATs of 1.75-2"), but the influence of the ridge would keep shower and thunderstorm coverage isolated to scattered. Temperatures and heat index values would remain quite a bit above normal for this time of year, with highs in the low to mid 90s and heat index values in the upper 90s to low 100s. At some point 'fall-like' weather will finally arrive, but its very unlikely for the next 7-10 days.

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:41 ET; retrieved Sep 9 14:38 ET; 117 min before this run.

- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.23 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 060 degrees true, 067 degrees magnetic, at 12 knots gusting 19 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KSAV METAR 091641Z.

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

is not a fault. Expected to be covered from about Wed Sep 9 · 6:00 PM ET. The extended GFS MOS (MEX) outlook does reach this day and is shown as a labelled rough outlook; it never states a flight category.

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:55 ET; retrieved Sep 9 14:38 ET; 103 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.16 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 080 degrees true, 087 degrees magnetic, at 11 knots gusting 16 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSSI METAR 091655Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

weather, and they never change a flight category. NOTAMs were read for KSSI this run.

published WFO surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 52% · wind 6 kt · 79°F; 20:00 ET sky ovc · PoP12 48% · TS12 44% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Sat, Sep 12 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Sun, Sep 13 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Evidence & limitations

- METAR source state: ok; observed Sep 9 12:55 ET; retrieved Sep 9 14:38 ET; 103 min before this run.
- Measured values read from the KJZI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.24 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 070 degrees true, 078 degrees magnetic, at 14 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJZI METAR 091655Z.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 44% · TS12 34% · wind 4 kt · 79°F; 20:00 ET sky ovc · PoP12 57% · TS12 27% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 34%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 55% · TS12 50% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 34% · TS12 39% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 50%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.28 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 100 degrees true, 109 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 18 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 091653Z.

The outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Sep 9 12:50 ET; retrieved Sep 9 14:38 ET; 108 min before this run.
- Measured values read from the KHxD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.22 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHxD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 060 degrees true, 068 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 03. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 2% · wind 3 kt · 66°F; 20:00 ET sky ovc · PoP12 46% · TS12 9% · wind 5 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 9%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 15% · TS12 14% · wind 3 kt · 66°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 3% · wind 4 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 14%, 12 h precipitation probability 15%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 42% · TS12 9% · wind 6 kt · 72°F; 20:00 ET sky ovc · PoP12 65% · TS12 21% · wind 7 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 21%, 12 h precipitation probability 65%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. Evidence & limitations

- METAR source state: ok; observed Sep 9 12:54 ET; retrieved Sep 9 14:38 ET; 104 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.17 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 070 degrees true, 077 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KSGJ METAR 091654Z.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 57% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 57% · TS12 41% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.16 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 070 degrees true, 077 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRG METAR 091653Z.

GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 49% · TS12 57% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 55% · TS12 43% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 49%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:50 ET; retrieved Sep 9 14:38 ET; 108 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.15 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 100 degrees true, 107 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. Wind source: KFIN METAR 091650Z.

GFS MEX - MVFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 58% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Sep 9 12:56 ET; retrieved Sep 9 14:38 ET; 102 min before this run.
- Measured values read from the KGKT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.27 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 190 degrees true, 197 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 28. GFS MEX - VFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 14% · wind 0 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 23% · wind 4 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted VFR from sky cover clear, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:55 ET; retrieved Sep 9 14:38 ET; 103 min before this run.
- Measured values read from the KSHD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.24 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 210 degrees true, 220 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The wind-favoured end 23 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSHD METAR 091655Z.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 69% · TS12 23% · wind 3 kt · 68°F; 20:00 ET sky ovc · PoP12 60% · TS12 34% · wind 4 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 23%, 12 h precipitation probability 69%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 29% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 51% · TS12 18% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 18%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 20% · TS12 54% · wind 7 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 27% · TS12 16% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 54%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 51% · TS12 64% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 58% · TS12 43% · wind 6 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 64%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:56 ET; retrieved Sep 9 14:38 ET; 102 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.14 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 080 degrees true, 082 degrees magnetic, at 6 knots gusting 12 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJKA METAR 091656Z.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 41% · TS12 49% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 60% · TS12 31% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.17 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 060 degrees true, 062 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBFM METAR 091653Z.

- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 61%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.14 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 030 degrees true, 031 degrees magnetic, at 7 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KGPT METAR 091653Z.

Evidence & limitations

•

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 44% · TS12 63% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 67% · TS12 38% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

•

Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 63%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

•

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · TS12 71% · wind 8 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 24% · TS12 35% · wind 5 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 71%, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:55 ET; retrieved Sep 9 14:38 ET; 103 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.10 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 220 degrees true, 226 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 39% · TS12 74% · wind 5 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 28% · TS12 39% · wind 4 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 74%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 240 degrees true, 246 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The wind-favoured end 22 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 091653Z.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 31% · TS12 70% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 20% · TS12 31% · wind 8 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 70%, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:55 ET; retrieved Sep 9 14:38 ET; 103 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 200 degrees true, 206 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KVNC METAR 091655Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 31% · TS12 80% · wind 9 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 21% · TS12 25% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 80%, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 39% · wind 5 kt · 75°F; 20:00 ET sky ovc · PoP12 64% · wind 6 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h precipitation probability 64%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.16 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 050 degrees true, 051 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KNEW METAR 091653Z.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 60%, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. Beyond the 30 h TAF horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Wed Sep 9 · 6:00 PM ET. The extended GFS MOS (MEX) outlook does reach this day and is shown as a labelled rough outlook; it never states a flight category.

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMS were read for KNEW this run.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:53 ET; retrieved Sep 9 14:38 ET; 105 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 090 degrees true, 097 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 09L and 09R. Wind source: KOPF METAR 091653Z.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 74% · wind 6 kt · 81°F; 20:00 ET sky ovc · PoP12 34% · TS12 35% · wind 9 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 74%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 53%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 16% · TS12 52% · wind 8 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 26% · TS12 28% · wind 10 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Evidence & limitations

- METAR source state: ok; observed Sep 9 12:56 ET; retrieved Sep 9 14:38 ET; 102 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.16 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 170 degrees true, 183 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 16 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 091656Z.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 5% · TS12 1% · wind 6 kt · 69°F; 20:00 ET sky clear · PoP12 4% · TS12 3% · wind 10 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 1%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 15 SIGMET records, 19 G-AIRMET records, 4 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV, KFIN; Gulf East: MVFR at KECF.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip-window feasibility evidence (Derived): 0 of 4 active trip days carry a forecast flight category and 4 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Sep 11 – Mon Sep 14, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time.
- KLZU current observation: VFR — conditions now, not a trip day. KLZU: 5 of 21 current NOTAMs are new by the stated 72-hour publication window.
- 0 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 38 hazard areas retained a coordinate ring this run, 0 of them valid inside the trip window, by the geometric test named below.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 11 – Mon Sep 14, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): not assessable from forecast categories — 0 of 4 active trip days in Fri Sep 11 – Mon Sep 14, 2026 carry a forecast flight category and 4 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 11, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sat Sep 12, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sun Sep 13, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).

- Mon Sep 14, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 0 of 29 covered airports resolve a forecast flight category on at least one active trip day; 29 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- No covered airport resolves a forecast flight category on an active trip day in this run, so no per-airport category is listed. That is the honest answer at this lead time, not a statement that the airports are unusable.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 38 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- None of the 38 retained hazard areas is valid inside the planned trip window. SIGMETs, G-AIRMETs and CWAs are short-fuse products, so what follows describes conditions now and in the next few hours — it is not a forecast for the trip, and it must not be read as one.
- G-AIRMET ZULU — ICE: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 9 NM. valid 2026-09-09 14:45Z to 2026-09-09 21:00Z.
- G-AIRMET TANGO — TURB-HI: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 68 NM. valid 2026-09-09 14:45Z to 2026-09-09 21:00Z.
- SIGMET 74E — CONVECTIVE: contains KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KVNC 78 NM, KSRQ 97 NM. valid 2026-09-09 17:55Z to 2026-09-09 19:55Z.
- SIGMET 76E — CONVECTIVE: contains KHXD, KSAV, KSSI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 1 NM, KSGJ 23 NM, KJZI 26 NM, KFIN 53 NM, KDAB 70 NM, KMYR 85 NM, KCRE 94 NM. valid 2026-09-09 17:55Z to 2026-09-09 19:55Z.
- SIGMET 77E — CONVECTIVE: contains KSGJ, KFIN, KDAB (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 9 NM, KTPF 50 NM, KSSI 58 NM, KSPG 62 NM, KSRQ 66 NM, KVNC 67 NM, KOPF 78 NM. valid 2026-09-09 17:55Z to 2026-09-09 19:55Z.
- CWA 301 — TS over ZJX (Jacksonville): boundary within 100 NM of KTPF 11 NM, KSPG 18 NM, KCRG 31 NM, KSGJ 35 NM, KFIN 36 NM, KDAB 39 NM, KSRQ 40 NM, KSSI 48 NM, KVNC 60 NM, KSAV 70 NM, KHXD 96 NM. valid 2026-09-09 18:05Z to 2026-09-09 19:05Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KSPG 8 NM, KSRQ 15 NM, KTPF 15 NM, KVNC 35 NM, KNEW 49 NM, KHSA 79 NM, KDAB 82 NM, KGPT 90 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-09 14:45Z to 2026-09-09 21:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KHPN 83 NM. valid 2026-09-09 16:45Z to 2026-09-09 21:00Z.
- SIGMET 02C — CONVECTIVE: boundary within 100 NM of KNEW 34 NM, KHSA 61 NM, KGPT 71 NM. valid 2026-09-09 17:55Z to 2026-09-09 19:55Z.
- SIGMET 72E — CONVECTIVE: boundary within 100 NM of KNEW 40 NM, KJKA 46 NM, KSPG 46 NM, KECP 47 NM, KTPF 51 NM, KHSA 53 NM, KGPT 55 NM, KPNS 57 NM, KSRQ 63 NM, KBFM 66 NM, KVNC 82 NM. valid 2026-09-09 17:55Z to 2026-09-09 19:55Z.
- SIGMET 73E — CONVECTIVE: boundary within 100 NM of KVNC 16 NM, KSRQ 19 NM, KSPG 26 NM, KTPF 38 NM, KOPF 90 NM. valid 2026-09-09 17:55Z to 2026-09-09 19:55Z.
- 27 of 38 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 15, G-AIRMET 19, CWA 4; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-09T18:38:06.440563+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 5 of 21 current NOTAMs are new by that baseline — 09/012 (OTHER, last_updated_at 2026-09-08T14:37:00+00:00); A0337/26 (RUNWAY, last_updated_at 2026-09-08T16:54:00+00:00); 09/014 (OTHER, last_updated_at 2026-09-08T18:37:00+00:00); 09/015 (OTHER, last_updated_at 2026-09-09T12:58:00+00:00); A0338/26 (OTHER, last_updated_at 2026-09-09T12:58:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 09/012 (OTHER) states: “SVC AUTOMATED WX BCST SYSTEM NOT AVBL”; 09/014 (OTHER) states: “SVC AUTOMATED WX BCST SYSTEM NOT AVBL”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
