• KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 080 degrees true, 086 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. Wind source: KLZU METAR 291356Z.

METAR – issued hourly. The NWS issues a SPECI report if there is a significant change in visibility, wind, or other conditions. Issued by the NWS, not a forecast. KLZU observations describe the current conditions.

TAF – highest forecast. The NWS issues a TAF for the next 24 hours. It includes the time of day and the time of day. It is the most accurate forecast. It is the most accurate forecast. It is the most accurate forecast.

NWS hour – Weather Service hourly forecast. It includes the time of day and the time of day. It is the most accurate forecast. It is the most accurate forecast. It is the most accurate forecast.

NWS day/night – Weather Service day/night forecast. It includes the time of day and the time of day. It is the most accurate forecast. It is the most accurate forecast. It is the most accurate forecast.

GFS MEX – Global Forecast System (GFS) Medium-Range Outlook (MEX) for Mexico. It includes the time of day and the time of day. It is the most accurate forecast. It is the most accurate forecast. It is the most accurate forecast.

GFS extended – Global Forecast System (GFS) Extended Range Outlook (MEX) for Mexico. It includes the time of day and the time of day. It is the most accurate forecast. It is the most accurate forecast. It is the most accurate forecast.

GFA and NOTAM – GFA and NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — issued hourly. The METAR contains current weather observations, including visibility, wind, clouds, and temperature. It is issued by aviation weather stations and is the primary source of weather information for pilots. KLZU observations are available on this page.

TAF — The TAF (Terminal Area Forecast) provides a forecast of weather conditions for a specific airport. It includes information on wind, clouds, visibility, and precipitation. TAFs are issued by the National Weather Service (NWS) and are valid for a period of 24 hours. The TAF for KLZU is available on this page.

NWS hour — NWS hourly forecasts provide a detailed look at the weather conditions for a specific hour. They include information on wind, clouds, visibility, and precipitation. The NWS hourly forecast for KLZU is available on this page.

NWS day/night — NWS day and night forecasts provide a detailed look at the weather conditions for a specific day and night. They include information on wind, clouds, visibility, and precipitation. The NWS day/night forecast for KLZU is available on this page.

GFS MEX — The GFS MEX (Global Forecast System Mexico) provides a forecast of weather conditions for Mexico. It includes information on wind, clouds, visibility, and precipitation. The GFS MEX forecast for KLZU is available on this page.

GFS extended — The GFS extended forecast provides a forecast of weather conditions for a specific period. It includes information on wind, clouds, visibility, and precipitation. The GFS extended forecast for KLZU is available on this page.

GFA and NOTAM — GFA (Global Forecast System) and NOTAM (Notice to Air Missions) provide information on closures, outages, obstacles, and other important information for pilots. They are issued continuously by the FAA and are valid until cancelled. On this page, they are used to provide advisory evidence about the airport, not to change a flight category. NOTAMs were read for KLZU this morning.

SHORT TERM

..
(Today through Wednesday)
Issued at 241 AM EDT Tue Sep 29 2026

Last great feeling dry day today before moisture begins to return to the region on Wednesday. Weak surface ridge centered over the Ohio Valley is currently in the process of bridging the Appalachians and wedge into the region today from the Northeast. Sfc winds have already started to hint at the wedge nosing in. It will be short lived as the ridge progresses off the east coast and winds become more southeasterly on Wednesday. Aloft, a 1 sigma 590dm 500mb ridge sets up over the region through the short term, which should help suppress both clouds and convection across the region. Both morning lows and daytime highs will slowly begin to creep back up above climo starting today through the end of the week. Like yesterday, dewpoint guidance is underdone and not

accounting for afternoon mixing in this environment. Have mixed in NBM 90th pcntle guidance which is resulting in 20-35% RH values this afternoon for much of the area.

LONG TERM

..
(Wednesday night through Monday)
Issued at 241 AM EDT Tue Sep 29 2026

The long term will be a period of changing weather as we swing back from our first real taste of fall back to a more summer environment before once again moving back into fall weather. Despite some complex interactions between several moving parts, ensembles and the AI guidance are in pretty good agreement overall on how thing should play out through the weekend into early next week.

Starting Wednesday night into Thursday, surface high pressure will be established just off the Carolina coastline. The moisture from the remnants of Hurricane Polo will have merged with an upper level low moving over the 4 corners region. The net effect over us from this system will be to really "pump" the subtropical ridge aloft before gliding along the baroclinic boundary established across the center of the county and getting absorbed to the north of us with a strong system moving across Canada and the Great Lakes. Unfortunately, this means unseasonably warm temps will be making a return Thursday, Friday, and maybe into Saturday, though more on that. Moisture will steadily increase as it is pumped from the Gulf and tropics into the area by the aforementioned surface high off the coast through Saturday, bringing dewpoints into the upper 60s and 70s. Rain chances will pick up again on Friday where the CWA will be near the right entrance region of a jet streak to our north and deeper moisture will be present through the whole column. This may be somewhat diurnal in nature, similar to a classic summer day.

Going into Saturday, most guidance shows a Tropical Storm Rachel in the east Pacific as a hurricane stalling a bit to the south of the Baja Cal peninsula. This is pumping up a more western based ridge and sending a potent wave into the upper midwest that will be important Sunday and Monday. Surface high pressure is progged to move over the far northern Appalachians sometime on Saturday. Some uncertainty here on how things will evolve, as this will position the high in a way to allow for some CAD to slide down to the south, but the high may not be strong enough and sit long enough for much effect here. Either way, the column looks to be nearly saturated setting us up for widespread showers and storms.

Going into Sunday, upper level system moves across just to the north and brings strong frontal system into the area. Rain chances look best across northern Georgia, though everyone should see something into Monday as a front slides south. NBM probabilities of over 2" of rain in 24 hours are hovering around 30-40% in north Georgia, showing there is a decent signal for good rainfall with this system even this far out. Front will bring cooler temperatures in the area for the beginning of next week.

The long term will be a period of changing weather as we swing back from our first real taste of fall back to a more summer environment before once again moving back into fall weather. Despite some complex interactions between several moving parts, ensembles and the

AI guidance are in pretty good agreement overall on how thing should play out through the weekend into early next week.

Starting Wednesday night into Thursday, surface high pressure will be established just off the Carolina coastline. The moisture from the remnants of Hurricane Polo will have merged with an upper level low moving over the 4 corners region. The net effect over us from this system will be to really "pump" the subtropical ridge aloft before gliding along the baroclinic boundary established across the center of the county and getting absorbed to the north of us with a strong system moving across Canada and the Great Lakes. Unfortunately, this means unseasonably warm temps will be making a return Thursday, Friday, and maybe into Saturday, though more on that. Moisture will steadily increase as it is pumped from the Gulf and tropics into the area by the aforementioned surface high off the coast through Saturday, bringing dewpoints into the upper 60s and 70s. Rain chances will pick up again on Friday where the CWA will be near the right entrance region of a jet streak to our north and deeper moisture will be present through the whole column. This may be somewhat diurnal in nature, similar to a classic summer day.

Going into Saturday, most guidance shows a Tropical Storm Rachel in the east Pacific as a hurricane stalling a bit to the south of the Baja Cal peninsula. This is pumping up a more western based ridge and sending a potent wave into the upper midwest that will be important Sunday and Monday. Surface high pressure is progged to move over the far northern Appalachians sometime on Saturday. Some uncertainty here on how things will evolve, as this will position the high in a way to allow for some CAD to slide down to the south, but the high may not be strong enough and sit long enough for much effect here. Either way, the column looks to be nearly saturated setting us up for widespread showers and storms.

Going into Sunday, upper level system moves across just to the north and brings strong frontal

- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 040 degrees true, 047 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. Wind source: KSAV METAR 291353Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 20% · TS12 5% · wind 8 kt · 74°F; 20:00 ET sky ovc · PoP12 40% · TS12 5% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 5%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · TS12 13% · wind 8 kt · 77°F; 20:00 ET sky ovc · PoP12 42% · TS12 19% · wind 9 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 19%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 11% · TS12 2% · wind 5 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 3% · wind 7 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 350 degrees true, 359 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 291353Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 8% · TS12 0% · wind 7 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 1% · wind 9 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.

- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 360 degrees true, 009 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. GFS MEX - VFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 8% · TS12 0% · wind 7 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 1% · wind 9 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:50 ET; retrieved Sep 29 11:31 ET; 101 min before this run.
- Measured values read from the KHxD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHxD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 060 degrees true, 068 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 03. Wind source: KHxD METAR 291350Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 4%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:36 ET; retrieved Sep 29 11:31 ET; 115 min before this run.
- Measured values read from the KTRI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 10% · TS12 1% · wind 2 kt · 58°F; 20:00 ET sky partly cloudy · PoP12 24% · TS12 0% · wind 9 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 10%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 9% · TS12 2% · wind 5 kt · 66°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 0% · wind 8 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Sep 29 09:56 ET; retrieved Sep 29 11:31 ET; 95 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 230 degrees true, 237 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KSGJ METAR 291356Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 41% · TS12 29% · wind 9 kt · 77°F; 20:00 ET sky ovc · PoP12 44% · TS12 25% · wind 12 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 41%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 25%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 90% · wind 3 kt · 68°F; 20:00 ET sky ovc · PoP12 66% · wind 7 kt · 67°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h precipitation probability 90%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

• METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.

• Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 29.97 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 050 degrees true, 053 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KECP METAR 291353Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 51% · TS12 21% · wind 7 kt · 76°F; 20:00 ET sky ovc · PoP12 64% · TS12 18% · wind 11 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 18%, 12 h precipitation probability 64%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 18%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 060 degrees true, 062 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 291353Z.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 35% · wind 10 kt · 78°F; 20:00 ET sky ovc · PoP12 69% · TS12 26% · wind 11 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 26%, 12 h precipitation probability 69%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.							
No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.							
Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 23%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 33%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 030 degrees true, 032 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 14 and 32. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBFM METAR 291353Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 31% · wind 12 kt · 78°F; 20:00 ET sky ovc · PoP12 69% · TS12 25% · wind 10 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 25%, 12 h precipitation probability 69%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 58% · TS12 35% · wind 11 kt · 78°F; 20:00 ET sky ovc · PoP12 74% · TS12 27% · wind 11 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 74%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 52% · TS12 23% · wind 10 kt · 76°F; 20:00 ET sky ovc · PoP12 66% · TS12 20% · wind 7 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 20%, 12 h precipitation probability 66%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:50 ET; retrieved Sep 29 11:31 ET; 101 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 120 degrees true, 126 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 291350Z.

rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 44% · TS12 45% · wind 13 kt · 80°F; 20:00 ET sky ovc · PoP12 55% · TS12 23% · wind 13 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 45%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 100 degrees true, 106 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 291353Z.

- METAR source state: ok; observed Sep 29 09:35 ET; retrieved Sep 29 11:31 ET; 116 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 090 degrees true, 096 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. - Predicted IFR from sky cover ovc, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 080 degrees true, 081 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KNEW METAR 291353Z.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 20%, 12 h precipitation probability 58%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:53 ET; retrieved Sep 29 11:31 ET; 98 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 290 degrees true, 297 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 30. Wind source: KOPF METAR 291353Z.

GFS MEX - IFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 56% · wind 9 kt · 80°F; 20:00 ET sky ovc · PoP12 55% · TS12 38% · wind 13 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 56%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: ok).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 56% · wind 9 kt · 80°F; 20:00 ET sky ovc · PoP12 55% · TS12 38% · wind 13 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 56%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Evidence & limitations

- METAR source state: ok; observed Sep 29 09:56 ET; retrieved Sep 29 11:31 ET; 95 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 300 degrees true, 313 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 291356Z.

Evidence & limitations

- METAR source state: ok; observed Sep 29 09:51 ET; retrieved Sep 29 11:31 ET; 100 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 320 degrees true, 334 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. Wind source: KBED METAR 291351Z.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 7 SIGMET records, 38 G-AIRMET records, 3 CWA records. Regional current observations (not corridor forecasts): Atlantic South: category unavailable at KFIN; Long-range: IFR/LIFR at KBED; Long-range: category unavailable at KOPF.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows

- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip-window feasibility evidence (Derived): 0 of 4 active trip days carry a forecast flight category and 4 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time. 0 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking.
- KLZU current observation: VFR — conditions now, not a trip day. 48 hazard areas retained a coordinate ring this run, 0 of them valid inside the trip window, by the geometric test named below. KLZU: 12 of 21 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): not assessable from forecast categories — 0 of 4 active trip days in Fri Oct 2 – Mon Oct 5, 2026 carry a forecast flight category and 4 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Oct 2, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sat Oct 3, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sun Oct 4, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Oct 5, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 0 of 29 covered airports resolve a forecast flight category on at least one active trip day; 29 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- No covered airport resolves a forecast flight category on an active trip day in this run, so no per-airport category is listed. That is the honest answer at this lead time, not a statement that the airports are unusable.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 48 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- None of the 48 retained hazard areas is valid inside the planned trip window. SIGMETs, G-AIRMETs and CWAs are short-fuse products, so what follows describes conditions now and in the next few hours — it is not a forecast for the trip, and it must not be read as one.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBED 43 NM, KHPN 46 NM, KTRI 55 NM. valid 2026-09-29 14:45Z to 2026-09-29 21:00Z.
- G-AIRMET TANGO — TURB-HI: contains KGPT, KHSA, KNEW (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBFM 39 NM, KJKA 65 NM, KPNS 82 NM. valid 2026-09-29 14:45Z to 2026-09-29 21:00Z.
- SIGMET 25E — CONVECTIVE: contains KTPF, KSPG, KSRQ, KVNC, KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KDAB 86 NM. valid 2026-09-29 14:55Z to 2026-09-29 16:55Z.
- CWA 103 — TS over ZJX (Jacksonville): boundary within 100 NM of KTPF 61 NM, KSGJ 63 NM, KCRG 67 NM, KSPG 69 NM, KDAB 78 NM, KSRQ 91 NM. valid 2026-09-29 15:10Z to 2026-09-29 16:10Z.
- CWA 103 — TURB over ZHU (Houston): boundary within 100 NM of KNEW 72 NM, KHSA 98 NM. valid 2026-09-29 13:49Z to 2026-09-29 15:45Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KSSI 18 NM, KSAV 29 NM, KHXD 56 NM, KCRG 58 NM, KSGJ 82 NM, KLZU 98 NM, KJZI 99 NM. valid 2026-09-29 14:45Z to 2026-09-29 21:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 29 NM. valid 2026-09-29 14:45Z to 2026-09-29 21:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 53 NM, KHPN 56 NM, KSHD 57 NM. valid 2026-09-29 14:45Z to 2026-09-29 21:00Z.
- 40 of 48 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 7, G-AIRMET 38, CWA 3; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-29T15:31:07.988796+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 12 of 21 current NOTAMs are new by that baseline — 09/038 (OTHER, last_updated_at 2026-09-28T14:37:00+00:00); A0359/26 (OTHER, last_updated_at 2026-09-28T14:37:00+00:00); 09/039 (OTHER, last_updated_at 2026-09-28T21:58:00+00:00); A0360/26 (RUNWAY, last_updated_at 2026-09-29T11:15:00+00:00); 09/040 (RUNWAY, last_updated_at 2026-09-29T11:18:00+00:00); A0361/26 (RUNWAY, last_updated_at 2026-09-29T11:18:00+00:00); 6/6108 (NAV_APPROACH, last_updated_at 2026-09-29T15:28:00+00:00); A0362/26 (NAV_APPROACH, last_updated_at 2026-09-29T15:28:00+00:00); 6/6110 (NAV_APPROACH, last_updated_at 2026-09-29T15:30:00+00:00); 6/6111 (NAV_APPROACH, last_updated_at 2026-09-29T15:30:00+00:00); A0363/26 (NAV_APPROACH, last_updated_at 2026-09-29T15:30:00+00:00); A0364/26 (NAV_APPROACH, last_updated_at 2026-09-29T15:30:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6108 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6110 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6111 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0362/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0363/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0364/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 09/039 (OTHER) states: “SVC AUTOMATED WX BCST SYSTEM NOT AVBL”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
