- TAF
- NWS-hr
- NWS-day
- MAV
- MEX
- GFA
- NOTAM

METAR — issued hourly, highest visibility, wind, and conditions. KLZU observed conditions now, not this trip day.

TAF — The NWS hourly gridpoint forecast for KLZU, updated every 3 hours and reaching about 156 miles. It is the spine of the forecast for this board. The NWS hourly forecast covers part of this day.

NWS hourly gridpoint forecast for KLZU, updated every 3 hours and reaching about 156 miles. It is the spine of the forecast for this board. The NWS hourly forecast covers part of this day.

GFS MOS (MAV) — the GFS model output, updated every 3 hours by the National Weather Service. It carries a forecast category, so this is the flight category. This period corroborates the forecast.

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this period.

.. (This afternoon through Saturday)

Issued at 240 PM EDT Fri Sep 4 2026

Cumulus field currently across the area with isolated to scattered showers and thunderstorms possible through the remainder of the evening. — .. (Sunday morning through next Thursday)

Issued at 240 PM EDT Fri Sep 4 2026

By Sun morning the Bermuda ridge centered off the GA/SC coast will have weakened...

SHORT TERM

..

(This afternoon through Saturday)

Issued at 240 PM EDT Fri Sep 4 2026

Cumulus field currently across the area with isolated to scattered showers and thunderstorms possible through the remainder of the evening. Coverage is expected to be higher over central Georgia where there is more instability and moisture available for showers and thunderstorms. The main threats with these storms will be gusty winds. With lingering moisture into the morning hours central Georgia will likely see low clouds tomorrow morning like this morning.

Pushing into tomorrow, pattern will begin to change as the ridging shifts westward and the backdoor front begins to push into the northeast into Sunday. Coverage of showers and thunderstorms could be slightly more elevated tomorrow over northern Georgia with isolated to scattered coverage possible. With this comes a marginal risk over much of the northeast and eastern portions of Georgia stretching down into the metro ATL area. A few isolated storms could become strong to severe with the main threats being strong to locally damaging wind gusts. There area some models indicating the potential for a cluster of storms to push into the northeast late Saturday night into Sunday morning but will need to keep an eye on this solution as confidence remains low.

Heat will be the main impact through this weekend as temperatures continue to be in the mid to upper 90s across the area and heat index values soar into the mid 100s over much of the area. A heat advisory is in effect through Saturday evening for much of the area with the exception of the higher elevations in northeast Georgia. Make sure to take precautions if you are out in the heat this weekend!

LONG TERM

..

(Sunday morning through next Thursday)

Issued at 240 PM EDT Fri Sep 4 2026

By Sun morning the Bermuda ridge centered off the GA/SC coast will have weakened enough to allow a backdoor cold front to move SW out of the Carolinas and into NE GA Sun afternoon. This front is fairly weak and loses a lot of its strength as it pushes into the old weakening ridge, but it will be a catalyst for increased precip chances Sun/Mon. Instability indices stay fairly weak as well so not expecting much in the way of severe storms Sun afternoon/evening. Would not be surprised to see a strong storm or two as we are still in summer convection season. Slightly cooler air moves into the area behind the frontal boundary Monday, as a ridge of high pressure centered over Hudson Bay sinks southward into the Mid-Atlantic states. This ridge sets up like a wedge down the eastern seaboard with cooler easterly flow sting up across GA and the Carolinas Mon/Tue. There still remains the potential for diurnal convection,

Mon, with things drying out a bit for Tue/Wed/Thu.

Little change in the temperature trends are likely through the weekend with temps in the middle to upper 90s through Sunday. Will see slightly cooler temps Mon/Tue/Wed after the frontal boundary passes through with highs in the 80s to lower 90s. Temps rise back into the middle 90s by the end of next week.&&

National Weather Service Peachtree City GA
728 PM EDT Fri Sep 4 2026

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- Above normal temperatures and triple digit heat indices stick around through Saturday. A Heat Advisory is in effect across north and central Georgia through Saturday evening.
- Isolated to scattered showers and thunderstorms will develop this afternoon across portions of Central Georgia.
- Daily chances for showers and thunderstorms continue over the weekend into early next week.

WTS · blowing from · 160° true
KAVL METAR 050254Z

KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 160 degrees true, 167 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 17 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 050254Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 23% · wind 7 kt · 69°F; 20:00 ET sky ovc · PoP12 25% · TS12 20% · wind 7 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 20%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KTRI METAR 050253Z

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 010 degrees true, 018 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The wind-favoured end 05 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-09-05T04:31:24.551155Z.

· 18:00–00:00 ET ET · VFR

an outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 20% · wind 5 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 9% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 20%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND METAR 050254Z

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 100 degrees true, 109 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KROA METAR 050254Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 11% · TS12 29% · wind 8 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 12% · TS12 1% · wind 7 kt · 73°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KGKT METAR 050236Z

KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KGKT METAR 050236Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 06:00–12:00 ET ET · LIFR · 12:00–18:00 ET ET · VFR · 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only. It is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · wind 5 kt · 70°F; 20:00 ET sky ovc · PoP12 26% · wind 5 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 12% · wind 3 kt · 61°F; 20:00 ET sky clear · PoP12 7% · TS12 1% · wind 5 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 12%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface prog raster chart for F+006 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+012 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface prog raster chart for F+012 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

12:00–18:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+018 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 18Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

Wind calm

NO wind arrow is shown. Favoured

KSAV METAR 050253Z

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSAV METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · MVFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 60% · TS12 45% · wind 8 kt · 75°F; 20:00 ET sky ovc · PoP12 34% · TS12 38% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 45%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Wind calm

000. All runways to wind-favoured

KSSI METAR 050235Z

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSSI METAR 050235Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 63% · TS12 42% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 53% · TS12 42% · wind 10 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 42%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KJZI METAR 050235Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

· 18:00–00:00 ET ET · MVFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 55% · wind 5 kt · 75°F; 20:00 ET sky ovc · PoP12 43% · TS12 36% · wind 12 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 55%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 240 degrees true, 248 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 21. Wind source: KHXD METAR 050235Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 59% · TS12 48% · wind 7 kt · 77°F; 20:00 ET sky ovc · PoP12 38% · TS12 39% · wind 10 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 48%, 12 h precipitation probability 59%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ Wind calm

050. All runways in wind direction

KSGJ METAR 050256Z

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSGJ METAR 050256Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

category. NOTAMs were read for KSGJ this run.

published VFR surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00:00–06:00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 38% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 59% · TS12 39% · wind 7 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 180 degrees true, 187 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KFIN METAR 050235Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 41% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 60% · wind 6 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 210 degrees true, 219 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 18 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 55% · TS12 52% · wind 10 kt · 74°F; 20:00 ET sky ovc · PoP12 35% · TS12 33% · wind 13 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 250 degrees true, 259 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 52% · wind 8 kt · 73°F; 20:00 ET sky ovc · PoP12 34% · TS12 33% · wind 14 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - IFR** overcast 900 ft METAR observed / retrieved: 2026-09-05T02:53:00+00:00

10 sm 26 °C 23 °C 200° true at 4 kt · METAR measured: KCRG METAR 050253Z

WIND VS RUNWAYS

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 200 degrees true, 207 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRG METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 62% · TS12 41% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 59% · TS12 40% · wind 7 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 41%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - VFR** · clear below 12,000 ft (CLR) · METAR observed / retrieved: 2026-09-05T02:53:00+00:00

10 sm 26 °C 25 °C Calm · METAR measured: KECP METAR 050253Z

WIND VS RUNWAYS

KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KECP METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 37% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 57% · TS12 33% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 130 degrees true, 132 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 06:00–12:00 ET ET · VFR

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only; it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 47% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 37% · TS12 33% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 47%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface prog raster chart for F+006 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+012 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

53 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 32% · TS12 41% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 60% · TS12 31% · wind 8 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Effective 2026-07-21T18:51:00Z → 2026-10-01T15:00:00Z

5 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSPG this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 6% · TS12 35% · wind 7 kt · 83°F; 20:00 ET sky partly cloudy · PoP12 26% · TS12 10% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover clear, 12 h thunderstorm probability 35%, 12 h precipitation probability 6%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

category. NOTAMs were read for KTPF this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 7% · TS12 37% · wind 5 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 31% · TS12 10% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

25 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSRQ this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 7% · TS12 36% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 21% · TS12 10% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover clear, 12 h thunderstorm probability 36%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 7% · TS12 48% · wind 6 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 10% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover clear, 12 h thunderstorm probability 48%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 35% · TS12 49% · wind 4 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 37% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 49%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ From 042°M - 5 kt

WIND: 040° true, 042° mag

WINDY METAR: 050253Z

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 040 degrees true, 042 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KBFM METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · VFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 57% · wind 4 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 24% · TS12 34% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 57%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KGPT METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 39% · TS12 55% · wind 4 kt · 74°F; 20:00 ET sky clear · PoP12 23% · TS12 29% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 55%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KHSA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. No usable wind observation for this airport in this run, so no arrow is drawn and no runway is marked as favoured. Wind source: METAR wind unavailable — source state: unavailable.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · wind 3 kt · 74°F; 20:00 ET sky clear · PoP12 23% · wind 5 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KNEW METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · TS12 43% · wind 9 kt · 83°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 28% · wind 9 kt · 89°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 310 degrees true, 317 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 30. Wind source: KOPF METAR 050253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and
at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 62% · wind 6 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 36% · TS12 37% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 62%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 330 degrees true, 343 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 050256Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

· 00:00–06:00 ET ET · VFR

· 06:00–12:00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 2% · wind 6 kt · 63°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 10 kt · 67°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 280 degrees true, 294 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. Wind source: KBED METAR 050251Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Sat 05 Sep 00Z cycle · file published Sat 05 Sep 02Z, read from the image response, which places it in the Sat 05 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — [FAA Chart Supplement](#) (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 15 SIGMET records, 35 G-AIRMET records. Regional current observations (not corridor forecasts): Atlantic North: IFR/LIFR at KCRG; Gulf West: MVFR at KJKA; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 050256Z AUTO . AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 90/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=15, G-AIRMET=35, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=25, RATE_LIMITED=5; normalized records=824; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. Trip-window feasibility evidence (Derived): 2 of 3 active trip days carry a forecast flight category and 1 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category.
- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- KLZU current observation: VFR — conditions now, not a trip day. 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 50 hazard areas retained a coordinate ring this run, 50 of them valid inside the trip window, by the geometric test named below.
- KLZU: 6 of 23 current NOTAMs are new by the stated 72-hour publication window. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.

- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Sep 5, 06:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Sep 6, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/3 d), KBED MVFR (2/3 d), KBFM IFR (2/3 d), KCRE IFR (2/3 d), KCRG IFR (2/3 d), KDAB VFR (2/3 d), KECP MVFR (2/3 d), KFIN VFR (2/3 d), KGKT LIFR (2/3 d), KGPT MVFR (2/3 d), KHPN VFR (2/3 d), KHSA MVFR (2/3 d); 17 further airports in section 2.
- NOTAMs: 24 of 29 destinations report an active NOTAM; 5 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 50 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 50 of 50 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KGKT 1 NM, KTRI 38 NM, KLZU 49 NM. valid 2026-09-05 03:40Z to 2026-09-05 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KBED, KHPN (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSHD 89 NM. valid 2026-09-05 02:45Z to 2026-09-05 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KGPT 33 NM, KNEW 47 NM, KBFM 64 NM, KJKA 92 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-05 02:45Z to 2026-09-05 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KJKA 10 NM, KBFM 11 NM, KPNS 22 NM, KECP 41 NM, KGPT 64 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-05 02:45Z to 2026-09-05 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 11 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-05 02:45Z to 2026-09-05 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KFIN 4 NM, KDAB 6 NM, KSGJ 22 NM, KROA 34 NM, KTRI 41 NM, KCRG 41 NM, KOPF 73 NM, KSSI 75 NM, KTPF 86 NM, KGKT 91 NM, KSHD 94 NM, KCRE 97 NM, KSPG 98 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-05 02:45Z to 2026-09-05 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 78 NM. valid 2026-09-05 03:40Z to 2026-09-05 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 66 NM. valid 2026-09-05 03:40Z to 2026-09-05 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KCRG 13 NM, KSSI 21 NM, KSGJ 23 NM, KPNS 28 NM, KECP 32 NM, KFIN 36 NM, KDAB 52 NM, KJKA 53 NM, KSAV 53 NM, KBFM 57 NM, KHXD 76 NM. valid 2026-09-05 03:40Z to 2026-09-05 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KSHD 12 NM, KROA 34 NM. valid 2026-09-05 03:40Z to 2026-09-05 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KSHD 12 NM, KROA 48 NM. valid 2026-09-05 03:40Z to 2026-09-05 09:00Z.
- SIGMET 15E — CONVECTIVE: boundary within 100 NM of KDAB 23 NM, KFIN 26 NM, KSGJ 27 NM, KCRG 44 NM, KOPF 67 NM, KSSI 80 NM. valid 2026-09-05 03:55Z to 2026-09-05 05:55Z.
- SIGMET 16E — CONVECTIVE: boundary within 100 NM of KCRE 64 NM, KMYR 77 NM. valid 2026-09-05 03:55Z to 2026-09-05 05:55Z.
- SIGMET 19E — CONVECTIVE: boundary within 100 NM of KHPN 99 NM. valid 2026-09-05 03:55Z to 2026-09-05 05:55Z.
- 36 of 50 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 15, G-AIRMET 35, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-05T04:31:16.647998+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.

- KLZU: 6 of 23 current NOTAMs are new by that baseline — A0332/26 (OTHER, last_updated_at 2026-09-02T18:09:00+00:00); A0333/26 (OTHER, last_updated_at 2026-09-03T09:34:00+00:00); 09/006 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0335/26 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0336/26 (OTHER, last_updated_at 2026-09-03T15:59:00+00:00); 09/008 (OBSTRUCTION, last_updated_at 2026-09-04T03:35:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
