METAR – issued hourly. The NWS issues a SPECI report if there is a significant change in visibility, wind, or other conditions. Issued by the NWS, not a forecast. KLZU observations are described here.

TAF – The NWS issues a TAF for the next 24 hours. It includes the sky cover, wind, and other conditions. KLZU observations are described here.

NWS hour – Weather Service hourly forecast. It includes the sky cover, wind, and other conditions. KLZU observations are described here.

NWS day/night – Weather Service day and night forecast. It includes the sky cover, wind, and other conditions. KLZU observations are described here.

GFS Model – Global Forecast System model. It includes the sky cover, wind, and other conditions. KLZU observations are described here.

GFS ensemble – Global Forecast System ensemble model. It includes the sky cover, wind, and other conditions. KLZU observations are described here.

GFA and GFS – Global Forecast System and Global Forecast System ensemble model. It includes the sky cover, wind, and other conditions. KLZU observations are described here.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

SHORT TERM

..
(This afternoon through Saturday)
Issued at 224 PM EDT Fri Sep 18 2026

The strong mid-level ridge that dominated the weather pattern through much of the week is currently centered near the Mississippi River Valley region and continuing to retrograde to the west. As the high pressure regime loosens its grip over Georgia, moisture will begin to increase as a surface lee trough builds into the area from the northeast. Temperatures today will remain well above daily normals for mid-September, rising to highs in the low to mid 90s in all but the far northeastern mountains. Such highs are between 6-10 degrees above daily normals in areas south of a line from Columbus to Macon and between 10-16 degrees above daily normals in areas to the north. Hot temperatures and dewpoints increasing into the upper 60s to low 70s in north Georgia will contribute to strong destabilization, with SBCAPE values progged to peak between 2000-3000 J/kg this afternoon. A boundary ahead of the building lee trough will interact with this hot, unstable airmass as it arrives in north Georgia in the mid-afternoon hours, leading to the development of isolated to widely scattered thunderstorms near the mountains. These storms will propagate south and west through the late afternoon and into the evening ahead of the boundary as the lee trough pushes it further into the forecast area.

With the increase of low level moisture, precipitable water values in portions of north Georgia have increased to between 1.6-2 inches. Lingering dry air at the mid to upper levels in the wake of the weakening retreating ridge (say THAT five times fast) will enhance low level lapse rates and contribute to DCAPE values between 1000- 1200 J/kg in north Georgia. These factors in addition to robust SBCAPE will favor the development of a few strong to severe storms within this afternoon's convection, which will be capable of producing strong downburst winds, frequent lightning, and periods of heavy rain. SPC has maintained a day 1 Marginal Risk (level 1 of 5) of severe weather in the Atlanta Metro and locations to the east and northeast, as a result.

On Saturday, a closed mid-level low will cross the Florida Peninsula and enter the eastern Gulf. Warm and moist air wrapped around the low will overspread the area and promote the further increase of dewpoints into the low to mid 70s and PWATs to between 1.8-2.2 inches. Temperatures will once again rise into the low to mid 90s on Saturday afternoon, though heat index values will be higher than today amid increasing moisture, rising to between 99-104 degrees in all but the far northeastern mountains. Coverage of precipitation will also be greater on Saturday, with scattered diurnal thunderstorms forecast across the area during the afternoon and early evening, gradually diminishing after sunset. Diurnal instability will be strong once again across the area, though mid-level dry air and stronger low level lapse rates are anticipated to linger over the northwest half of the state where deeper moisture north of the mid-level low will be later to arrive. Thus, the potential for damaging winds from downbursts will be locally highest across north Georgia and portions of west-central Georgia, warranting a Marginal Risk for severe weather once again on Saturday.

King

LONG TERM

..
(Sunday morning through next Thursday)
Issued at 224 PM EDT Fri Sep 18 2026

Folks, there is light at the end of the tunnel for this long term forecast discussion. The 90 degree temperatures may finally exit the CWA. This is not a drill. The current forecast package shows zero 90 degree high temperature values on Thursday across north and central Georgia, and there is pretty darn good ensemble agreement as to why (for now). We just got to make it through the next week.

Trough moving through the NE this weekend won't bring a strong enough surface high to send any sort of relief our way just yet (foreshadowing!), and instead moist airmass will move overhead as the TUTT become cut-off low off the Florida coastline moves to the west. Expect a summertime like airmass, with highs in the 90s and afternoon and evening thunderstorm chances through the midweek. Monday and Tuesday currently look like the most favorable days for the afternoon convection. Severe weather chances look low at this time, mostly due to a lack of shear that should remain further to the north.

Things get a bit more interesting into the middle of the week. A broad surface high will move across Canada trailing another trough within the mid-latitude jet that has been shunted pretty far poleward for September. This surface high moves into eastern maritime Canadian provinces with broad reflection well into the NE CONUS into Wednesday. There is very broad ensemble agreement in this, both in the EURO and GEFS, with GEFS showing an -average- high strength around 1035 mb in some of the recent runs, an impressive signal 5-6 days out. This will set us up for a pretty decent CAD event, with the wedge well south down the Appalachians. Where a bit more uncertainty lies is in how the cut-off lows to the west interact with all of this. Some model runs shows one as a shortwave to the north that helps aid the development of a coastal low that enhances the wedge, with timing variable on when between Wednesday into Friday. Regardless of outcome, one result that looks clear is that cooler, more Fall-like air should come into the CWA some time next week. If the strongest of our wedge dreams come true, high temps could be as low as the 70s in some areas (looking at you 10th percentile), while 80s seem to be more favored at the moment.

Area Forecast Discussion
National Weather Service Peachtree City GA
741 PM EDT Fri Sep 18 2026

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- Unseasonably warm conditions will continue through the weekend. Heat index values will peak in the upper 90s to mid 100s today through Sunday.
- Increased moisture from the Mid-Atlantic states will result in a return of showers and scattered thunderstorms through this weekend.
- Marginal Risk of isolated strong to severe thunderstorms in the short term with strong gusty winds being the primary threat.

&&

.SHORT TERM...

(This afternoon through Saturday)

Issued at 224 PM EDT Fri Sep 18 2026

The strong mid-level ridge that dominated the weather pattern through much of the week is currently centered near the Mississippi River Valley region and continuing to retrograde to the west. As the high pressure regime loosens its grip over Georgia, moisture will begin to increase as a surface lee trough builds into the area from the northeast. Temperatures today will remain well above daily normals for mid-September, rising to highs in the low to mid 90s in all but the far northeastern mountains. Such highs are between 6-10 degrees above daily normals in areas south of a line from Columbus to Macon and between 10-16 degrees above daily normals in areas to the north. Hot temperatures and dewpoints increasing into the upper 60s to low 70s in north Georgia will contribute to strong destabilization, with SBCAPE values progged to peak between 2000-3000 J/kg this afternoon. A boundary ahead of the building lee trough will interact with this hot, unstable airmass as it arrives in north Georgia in the mid-afternoon hours, leading to the development of isolated to widely scattered thunderstorms near the mountains. These storms will propagate south and west through the late afternoon and into the evening ahead of the boundary as the lee trough pushes it further into the forecast area.

With the increase of low level moisture, precipitable water values in portions of north Georgia have increased to between 1.6-2 inches. Lingering dry air at the mid to upper levels in the wake of the weakening retreating ridge (say THAT five times fast) will enhance low level lapse rates and contribute to DCAPE values between 1000- 1200 J/kg in north Georgia. These factors in addition to robust SBCAPE will favor the development of a few strong to severe storms within this afternoon's convection, which will be capable of producing strong downburst winds, frequent lightning, and periods of heavy rain. SPC has maintained a day 1 Marginal Risk (level 1 of 5) of severe weather in the Atlanta

Metro and locations to the east and northeast, as a result.

On Saturday, a closed mid-level low will cross the Florida Peninsula and enter the eastern Gulf. Warm and moist air wrapped around the low will overspread the area and promote the further increase of dewpoints into the low to mid 70s and PWATs to between 1.8-2.2 inches. Temperatures will once again rise into the low to mid 90s on Saturday afternoon, though heat index values will be higher than today amid increasing moisture, rising to between 99-104 degrees in all but the far northeastern mountains. Evidence & limitations

• METAR source state: ok; observed Sep 19 00:54 ET; retrieved Sep 19 01:54 ET; 60 min before this run.

• Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.18 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 340 degrees true, 347 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. Wind source: KAVL METAR 190454Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND3–5 kt

TEMPERATURE68–76 °F

PRECIP CHANCE34%

TS CHANCE40%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · TS12 40% · wind 3 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 48% · TS12 26% · wind 5 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 40%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

 WIND5–8 kt

🌡

 TEMPERATURE74–80 °F

💧

 PRECIP CHANCE13%

⚡

 TS CHANCE24%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 13% · TS12 24% · wind 5 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 6% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 24%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 28% · TS12 24% · wind 5 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 35% · TS12 14% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 24%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · VFR

06:00–12:00 ET ET · MVFR

• Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 21 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 19% · TS12 23% · wind 3 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 11% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 23%, 12 h precipitation probability 19%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 330 degrees true, 339 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KMYR METAR 190453Z.

```

RUNWAY 08/036 — RWY 36 PAPI U/S DLY 0400-1000

Effective 2026-08-17T04:00:00Z → 2026-10-17T10:00:00Z

34 additional normalized FAA NOTAM records omitted from this view.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

• Sun, Sep 20 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 7% · wind 6 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 12% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 7%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 020 degrees true, 029 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRE METAR 190453Z.

METAR

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 7%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND4–6 kt

TEMPERATURE75–79 °F

PRECIP CHANCE15%

TS CHANCE24%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 15% · TS12 24% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 6% · wind 6 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 24%, 12 h precipitation probability 15%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHXD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

... and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- Mon, Sep 21 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 15% · TS12 24% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 6% · wind 6 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 24%, 12 h precipitation probability 15%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND2–6 kt

TEMPERATURE67–75 °F

PRECIP CHANCE36%

TS CHANCE41%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · TS12 41% · wind 2 kt · 67°F; 20:00 ET sky ovc · PoP12 57% · TS12 25% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

... and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Sep 20 · 00:00–06:00 ET: GFS MAV MOS · 00:00–06:00 ET ET · LIFR
- Sun, Sep 20 · 06:00–12:00 ET: GFS MAV MOS · 06:00–12:00 ET ET · LIFR
- Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · TS12 41% · wind 2 kt · 67°F; 20:00 ET sky ovc · PoP12 57% · TS12 25% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

GFS MEX - IFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 26% · TS12 34% · wind 4 kt · 70°F; 20:00 ET sky ovc · PoP12 62% · TS12 15% · wind 6 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 15%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 41% · TS12 27% · wind 7 kt · 74°F; 20:00 ET sky ovc · PoP12 43% · TS12 22% · wind 10 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 41%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

GFS MEX - MVFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 34% · TS12 24% · wind 5 kt · 74°F; 20:00 ET sky ovc · PoP12 43% · TS12 20% · wind 9 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 24%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

- Sun, Sep 20 · 06:00–12:00 ET: GFS MAV MOS · 06:00–12:00 ET ET · VFR
- Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- Mon, Sep 21 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 34% · TS12 24% · wind 5 kt · 74°F; 20:00 ET sky ovc · PoP12 43% · TS12 20% · wind 9 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 24%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Predicted

GFS
MEX

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Overcast

WIND4–7 kt

TEMPERATURE72–78 °F

PRECIP CHANCE48%

DEWPOINT71 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · wind 4 kt · 72°F; 20:00 ET sky ovc · PoP12 41% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KFIN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Sep 20 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · wind 4 kt · 72°F; 20:00 ET sky ovc · PoP12 41% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND1–4 kt

🌡

TEMPERATURE68–78 °F

💧

PRECIP CHANCE37%

💧

DEWPOINT66 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · wind 1 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 48% · wind 4 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 330 degrees true, 333 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KECP METAR 190453Z.

9 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

weather, and they never change a flight category. NOTAMs were read for KECP this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- Sun, Sep 20 · 00:00–06:00 ET: TAF · 00:00–06:00 ET ET · VFR
- Sun, Sep 20 · 06:00–12:00 ET: GFS MAV MOS · 06:00–12:00 ET ET · VFR
- Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- Mon, Sep 21 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 51% · wind 4 kt · 73°F; 20:00 ET sky ovc · PoP12 45% · TS12 33% · wind 5 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 51%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 330 degrees true, 332 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 190453Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production
source per owner decision 2026-08-09;
technical transport environment remains
preprod. Limited 2026-07-30 spot check
covered KLZU, KAVL, and KSGJ (3 of 30
airports). NOTAMs were read from this source
and used on this card this run. Typed state:
OK. The dot colour reports whether this
source was read this run; technical
environment: preprod.

2026-09-19T05:54:51.277016Z.

Effective 2025-09-08T16:19:00Z → 2027-09-08T16:19:00Z

FAA NOTAM text was truncated in this preview; verify the complete official record.

RUNWAY

62 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

06:00 ET ET · VFR

06:00–12:00 ET ET · VFR

• Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 21 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 55% · TS12 47% · wind 6 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 40% · TS12 38% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 47%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 53% · TS12 41% · wind 5 kt · 74°F; 20:00 ET sky ovc · PoP12 39% · TS12 30% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 41%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30

2026-09-19T05:54:51.279052Z.
ECHOED FOR MANY OTHER LOT LMS
:00Z

airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

Effective 2026-06-17T10:00:00Z → 2026-12-15T04:29:00Z

Effective 2026-06-17T10:00:00Z → 2026-12-15T04:29:00Z

Effective 2026-06-17T10:00:00Z → 2026-12-15T04:29:00Z

19 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · VFR

00 ET ET · MVFR

00 ET ET · MVFR

0000 ET ET · VFR

6:00 ET ET · VFR

6 · 06:00–12:00 ET ET · VFR

• Sun, Sep 20 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 20 • 18:00–00:00 ET: GFS MAV MOS • 18:00–00:00 ET ET • VFR

• **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) • 2 published point(s) for this ET day • 08:00 ET sky ovc • PoP12 53% • TS12 41% • wind 5 kt • 74°F; 20:00 ET sky ovc • PoP12 39% • TS12 30% • wind 8 kt • 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 41%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

6 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJKA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Sep 20 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 20 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

- **Sun, Sep 20 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 52% · TS12 39% · wind 4 kt · 72°F; 20:00 ET sky ovc · PoP12 41% · TS12 36% · wind 6 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 39%, 12 h precipitation probability 52%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.06 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 310 degrees true, 312 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KBFM METAR 190453Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND4–6 kt

TEMPERATURE76–83 °F

PRECIP CHANCE46%

TS CHANCE40%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 40% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 44% · TS12 35% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 310 degrees true, 311 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KGPT METAR 190453Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND3–7 kt

TEMPERATURE73–82 °F

PRECIP CHANCE34%

TS CHANCE35%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · TS12 35% · wind 3 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 52% · TS12 29% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 35%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 080 degrees true, 086 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. Wind source: KSPG METAR 190453Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND6–7 kt

TEMPERATURE79–83 °F

PRECIP CHANCE45%

TS CHANCE55%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 45% · TS12 55% · wind 7 kt · 79°F; 20:00 ET sky ovc · PoP12 53% · TS12 35% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 55%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 18 23:55 ET; retrieved Sep 19 01:54 ET; 119 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.

- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 070 degrees true, 076 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KTPF METAR 190355Z.

TS CHANCE57%

GFS MEX - IFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 57% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 53% · TS12 32% · wind 4 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KTPF observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- Sun, Sep 20 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- Mon, Sep 21 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 57% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 53% · TS12 32% · wind 4 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

OBSERVED

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 070 degrees true, 076 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSRQ METAR 190453Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND4–7 kt

TEMPERATURE76–82 °F

PRECIP CHANCE45%

TS CHANCE51%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 45% · TS12 51% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 52% · TS12 34% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 51%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 18 23:55 ET; retrieved Sep 19 01:54 ET; 119 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 080 degrees true, 086 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 190355Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND4–7 kt

TEMPERATURE77–83 °F

PRECIP CHANCE45%

TS CHANCE57%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 57% · wind 4 kt · 77°F; 20:00 ET sky ovc · PoP12 53% · TS12 32% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND3–6 kt

TEMPERATURE71–81 °F

PRECIP CHANCE31%

DEWPOINT71 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 31% · wind 3 kt · 71°F; 20:00 ET sky partly cloudy · PoP12 57% · wind 6 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHSA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

000 ET ET · VFR

000 ET ET · VFR

000 ET ET · VFR

00 ET ET · VFR

6:00 ET ET · VFR

6 · 06:00–12:00 ET ET · VFR

• Sun, Sep 20 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 20 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

- **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 31% · wind 3 kt · 71°F; 20:00 ET sky partly cloudy · PoP12 57% · wind 6 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:53 ET; retrieved Sep 19 01:54 ET; 61 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.06 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 160 degrees true, 161 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 18R and 18L. Wind source: KNEW METAR 190453Z.

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND6–7 kt

TEMPERATURE81–85 °F

PRECIP CHANCE26%

TS CHANCE32%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 26% · TS12 32% · wind 6 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 61% · TS12 23% · wind 7 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 32%, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

85 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

0000 ET ET · VFR

0000 ET ET · VFR

0000 ET ET · VFR

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sat, Sep 19** · 00:00–06:00 ET ET · VFR
- **Sat, Sep 19** · 06:00–12:00 ET ET · VFR
- **Sat, Sep 19** · 12:00–18:00 ET ET · VFR
- **Sat, Sep 19** · 18:00–00:00 ET ET · VFR
- **Sun, Sep 20** · 00:00–06:00 ET ET · VFR
- **Sun, Sep 20** · 06:00–12:00 ET ET · VFR
- **Sun, Sep 20** · 12:00–18:00 ET ET · VFR
- **Sun, Sep 20** · 18:00–00:00 ET ET · VFR
- **Mon, Sep 21** · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 64% · wind 5 kt · 79°F; 20:00 ET sky ovc · PoP12 73% · TS12 38% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 64%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 18 23:56 ET; retrieved Sep 19 01:54 ET; 118 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 330 degrees true, 343 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KHPN METAR 190356Z.

TS CHANCE3%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 65% · TS12 3% · wind 12 kt · 58°F; 20:00 ET sky ovc · PoP12 15% · TS12 2% · wind 12 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 65%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 19 00:51 ET; retrieved Sep 19 01:54 ET; 63 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 320 degrees true, 334 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. Wind source: KBED METAR 190451Z.

TEMPERATURE53–58 °F

PRECIP CHANCE77%

TS CHANCE4%

GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 77% · TS12 4% · wind 9 kt · 53°F; 20:00 ET sky partly cloudy · PoP12 6% · TS12 0% · wind 12 kt · 58°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 4%, 12 h precipitation probability 77%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · VFR

category. NOTAMs were read for KBED this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

S · 06:00–12:00 ET ET · VFR

S · 12:00–18:00 ET ET · IFR

- **Sun, Sep 20 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · LIFR
- **Mon, Sep 21 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 77% · TS12 4% · wind 9 kt · 53°F; 20:00 ET sky partly cloudy · PoP12 6% · TS12 0% · wind 12 kt · 58°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 4%, 12 h precipitation probability 77%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-19=GFS, 2026-09-20=GFS, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Extended outlook and hazard-feed states are reported in the source stamp.

Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 14 SIGMET records, 24 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KTRI; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 190356Z AUTO . AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 90/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=14, G-AIRMET=24, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=620; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip-window feasibility evidence (Derived): 2 of 3 active trip days carry a forecast flight category and 1 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Sep 18 – Mon Sep 21, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- KLZU current observation: VFR — conditions now, not a trip day. KLZU: 0 of 10 current NOTAMs are new by the stated 72-hour publication window.
- 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 38 hazard areas retained a coordinate ring this run, 38 of them valid inside the trip window, by the geometric test named below.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 18 – Mon Sep 21, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Sep 18 – Mon Sep 21, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Sep 19, 06:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Sep 20, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from MOS.
- Mon Sep 21, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).

- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/3 d), KBED LIFR (2/3 d), KBFM VFR (2/3 d), KCRE MVFR (2/3 d), KCRG VFR (2/3 d), KDAB MVFR (2/3 d), KECF VFR (2/3 d), KFIN MVFR (2/3 d), KGKT IFR (2/3 d), KGPT VFR (2/3 d), KHPN IFR (2/3 d), KHSB VFR (2/3 d); 17 further airports in section 2.
- NOTAMS: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 38 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 38 of 38 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KAVL, KSHD, KGKT, KROA, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KLZU 71 NM. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KROA, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 2 NM, KGKT 36 NM. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 44 NM. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 21 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KGPT 16 NM, KNEW 35 NM, KBFM 70 NM, KJKA 89 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KROA 29 NM, KSHD 47 NM, KHPN 76 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KHPN 75 NM. valid 2026-09-19 02:45Z to 2026-09-19 09:00Z.
- SIGMET 15E — CONVECTIVE: boundary within 100 NM of KGKT 17 NM, KTRI 60 NM, KAVL 67 NM. valid 2026-09-19 04:55Z to 2026-09-19 06:55Z.
- SIGMET 16E — CONVECTIVE: boundary within 100 NM of KSRQ 10 NM, KSPG 16 NM, KVNC 25 NM, KTPF 28 NM. valid 2026-09-19 04:55Z to 2026-09-19 06:55Z.
- SIGMET 17E — CONVECTIVE: boundary within 100 NM of KLZU 9 NM, KSAV 48 NM, KHND 62 NM, KJZI 66 NM, KAVL 69 NM, KGKT 90 NM, KSSI 98 NM. valid 2026-09-19 04:55Z to 2026-09-19 06:55Z.
- SIGMET 18E — CONVECTIVE: boundary within 100 NM of KOPF 18 NM, KDAB 39 NM, KFIN 46 NM, KSGJ 65 NM, KCRG 87 NM. valid 2026-09-19 04:55Z to 2026-09-19 06:55Z.
- 27 of 38 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 14, G-AIRMET 24, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-19T05:54:45.506193+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 10 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- No service-status wording was found in the published text of the 10 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
