- METAR
- TAF
- NWS-hr
- NWS-day
- MAV
- MEX
- GFA
- NOTAM

METAR — issued hourly, highest visibility, wind, and pressure. Issued by the National Weather Service (NWS) and not a forecast. KLZU observations describe conditions now, not this trip day.

TAF — The NWS hourly gridpoint forecast for KLZU, updated every 3 hours and reaching about 156 miles. It is the spine of the forecast for this board. The NWS hourly forecast covers part of this day.

NWS hourly gridpoint forecast for KLZU, updated every 3 hours and reaching about 156 miles. It is the spine of the forecast for this board. The NWS hourly forecast covers part of this day.

GFS MOS (MAV) — the GFS model output, updated every 3 hours by the National Weather Service. It carries a forecast category, so this is the flight category. The GFS MOS corroborates the forecast.

GFA and MAV — Forecast Predictions: surface pressure, temperature, and wind. This period and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — the routine observation report issued hourly by the observing office. It contains current conditions, including visibility, wind, temperature, dewpoint, and cloud cover. It is not a forecast, and it is the spine of the change weather. KLZU observation was read this run. It describes conditions now, not this trip day.

NWS hourly gridpoint forecast — Weather Service digital forecast for the cell containing KLZU, updated three times daily and reaching about 156 hours. It contains by-hour sky, wind and precipitation and it is the spine of the change weather. The NWS hourly gridpoint forecast reaches this day.

GFS extended range forecast — Coarse resolution, numerical model output, a long range outlook. This period is published by the office and valid time and never interpreted. It is simply past its reach, which is expected and is not a fault. Expected to be covered from about Thu Sep 3 · 12:00 AM ET.

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

WPC surface prog raster chart for F+066 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

NWS surface forecast mentions convection/showers (37% precipitation probability); compare timed periods with TAF and current radar; Surface temperature 93°F; calculate aircraft performance

Runway guidance is approximate wind alignment only; verify ATIS, NOTAMs and actual runway use.

RWY numbers magnetic; wind converted from true using 6°W variation (NOAA WMM2025)

METAR — the routine observation report issued hourly by the National Weather Service. It includes current conditions, visibility, wind, temperature, and other relevant data. It is not a forecast, and it is the spine of the change v KLZU observation was read this run. It describes conditions now, not this trip day.

Precipitation probability (PoP) 13–26%

Conditions only — not a flight category; states nothing about ceiling or visibility. GFS MEX predicts MVFR for this window — a prediction, not a flight category; MEX publishes no ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

NWS hourly gridpoint forecast — Weather Service digital forecast for cell containing KLZU, updated thr and reaching about 156 hours. It includes by-hour sky, wind and precipitation and it is the spine of the change v this board. The NWS hourly gridp reaches this day.

Precipitation probability (PoP) 13–26%

Conditions only — not a flight category; states nothing about ceiling or visibility. GFS MEX predicts MVFR for this window — a prediction, not a flight category; MEX publishes no ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

GFS extended range forecast — Coarse resolution numerical model output, a long range outlook. This period is published with a flight category and is shown in the dropdown with its value.

Precipitation probability (PoP) 13–26%

Conditions only — not a flight category; states nothing about ceiling or visibility. GFS MEX predicts MVFR for this window — a prediction, not a flight category; MEX publishes no ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

Precipitation probability (PoP) 13–26%

Conditions only — not a flight category; states nothing about ceiling or visibility. GFS MEX predicts MVFR for this window — a prediction, not a flight category; MEX publishes no ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

SHORT TERM

..
(This afternoon through Friday)
Issued at 221 PM EDT Thu Sep 3 2026

It's another hot afternoon across North and Central Georgia thanks to the dome of high pressure overhead and ridging aloft still in place over the MS Valley extending eastward. Current temperature observations range from 92-97F with heat indices in the upper 90s to low 100s. Make sure to stay hydrated and take frequent breaks in the shade if you're outdoors for an extended period. Similar to yesterday, there could be a stray shower around late this afternoon across our northern, western and extreme southeast counties but most will remain dry. Heading into Friday, the only notable change will be a slight uptick in afternoon rain chances across our far southern counties high pressure at the surface begins to slowly weaken and two weak boundaries one from the northeast and one from north FL creep towards the area. Wetting rain likely wont be substantial but coverage and probability of occurrence will be a tad higher than what we've seen the past few days.

Daytime temperatures will continue to remain in the mid to upper 90s through Friday. Dewpoints in the upper 60s to low 70s will keep heat indices in the upper 90s to lower 100s. With no significant pattern shift within the next 36-48hrs, elected to again extend the current Heat Advisory for Northwest Georgia through Friday evening. With outdoor activities likely ongoing heading into Labor Day weekend, potential heat related impacts were also considered. Additional extensions may be warranted going into the weekend.

LONG TERM

..
(Saturday morning through next Wednesday)
Issued at 221 PM EDT Thu Sep 3 2026

The Bermuda ridge centered off the GA/SC coast continues into the weekend but it begins to weaken Sat. This ridge continues to keep things mostly dry but precip chances slowly increase Sat into the beginning of next week. The models are showing a significant band of moisture associated with a weak frontal boundary moving northward out of the Gulf and northern FL Fri. With the ridge in place across north GA this boundary stalls across south GA but does increase precip chances across central GA due to its proximity Sat. With the ridge weakening as we go further into the weekend a backdoor cold front moves SW out of the Carolinas and into NE GA Sun afternoon. This front is fairly weak and loses a lot of its strength as it pushes into the old weakening ridge, but it will be a catalyst for increased precip chances Sun/Mon. Slightly cooler air is expected behind the frontal boundary Monday, as a ridge of high pressure centered over Hudson Bay sinks southward into the Mid-Atlantic states. There still remains the potential for diurnal convection, Mon, with things drying back out for Tue/Wed.

Little change in the temperature trends are likely through the weekend with temps in the middle to upper 90s through Sunday. Will see slightly cooler temps Mon/Tue/Wed after the frontal boundary passes through with highs in the 80s to lower 90s.

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- High pressure will promote continued hot temperatures and limited rain chances this afternoon.

- Above normal temperatures and triple digit heat indices stick around through Saturday. A Heat Advisory, in effect for Northwest Georgia has been extended through Friday evening.

- Rain and thunderstorm chances begin to increase by Friday through early next week.

Nearby SHRA should remain out of KATL but may impact other sites in metro ATL and AHN over next hour until 01Z. Gusty winds will be possible until 01Z up to 20-30 kts thanks to outflow from nearby TSRA at all sites. As outflows dissipate, winds will go light to near calm and VRB at most sites overnight. So

WIND VS RUNWAYS

KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 170 degrees true, 177 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 17 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 040254Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production
source per owner decision 2026-08-09;
technical transport environment remains
preprod. Limited 2026-07-30 spot check
covered KLZU, KAVL, and KSGJ (3 of 30
airports). NOTAMs were read from this source
and used on this card this run. Typed state:
OK. The dot colour reports whether this
source was read this run; technical
environment: preprod.

026-09-04T04:35:33.290298Z.

Effective 2026-09-10T04:00:00Z → 2026-09-10T09:30:00Z

42 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 43% · TS12 37% · wind 3 kt · 70°F; 20:00 ET sky ovc · PoP12 48% · TS12 25% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 40% · wind 5 kt · 67°F; 20:00 ET sky ovc · PoP12 38% · TS12 19% · wind 6 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ Wind calm

040253Z KTRI METAR 040253Z

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

Q5: How do you feel about the overall experience?

FAANGOTAM (NMO) = N-methyl-2-pyrrolidone

Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h. outlook — a single value

outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 40% · TS12 44% · wind 2 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 43% · TS12 26% · wind 5 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 44%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 19% · TS12 32% · wind 4 kt · 65°F; 20:00 ET sky ovc · PoP12 24% · TS12 7% · wind 4 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 32%, 12 h precipitation probability 19%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

FRI 04 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Fri 04 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

279 nm

Current observation **OBS - VFR** · clear below 12,000 ft (CLR) METAR observed / retrieved: 2026-09-04T02:54:00+00:00

☾ 10 sm 🌡 28 °C 💧 21 °C 🌬 280° true at 8 kt · METAR measured: KROA METAR 040254Z

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 280 degrees true, 289 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KROA METAR 040254Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 28% · TS12 40% · wind 4 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 14% · wind 7 kt · 73°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 6% · TS12 21% · wind 5 kt · 65°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 1% · wind 6 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 21%, 12 h precipitation probability 6%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

FRI 04 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Fri 04 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

Open this image at aviationweather.gov

WPC surface prog raster chart for F+006 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+012 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Fri 04 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

Open this image at aviationweather.gov

WPC surface prog raster chart for F+012 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

12:00–18:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+018 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Fri 04 Sep 18Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

Open this image at aviationweather.gov

WPC surface prog raster chart for F+018 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

18:00–00:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+024 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 00Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

Open this image at aviationweather.gov

WPC surface prog raster chart for F+024 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

SAT 05 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+030 h from the Fri 04 Sep 00Z cycle · file published Thu 03 Sep 23Z, read from the image response, which places it in the Thu 03 Sep 18Z cycle, not the computed Fri 04 Sep 00Z · valid Sat 05 Sep 00Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

Open this image at aviationweather.gov

WPC surface prog raster chart for F+030 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+036 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Sat 05 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 46% · wind 1 kt · 71°F; 20:00 ET sky partly cloudy · PoP12 32% · wind 5 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Mon, Sep 7 · Whole-day rough outlook:

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 18% · wind 2 kt · 68°F; 20:00 ET sky ovc · PoP12 29% · wind 4 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted MVFR from sky cover ovc, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

2 Act on

2 Brief

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production
source per owner decision 2026-08-09;
technical transport environment remains
preprod. Limited 2026-07-30 spot check
covered KLZU, KAVL, and KSGJ (3 of 30
airports). NOTAMs were read from this source
and used on this card this run. Typed state:
OK. The dot colour reports whether this
source was read this run; technical
environment: preprod.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSHD this run.

no-go here is derived from an image. A published WPC surface chart matches this

0 ET ET · VFR

0 ET ET · MVFR

0 ET ET · MVFR

0 ET ET · MVFR

00:00–06:00 ET ET · LIFR

06:00–12:00 ET ET · LIFR

12:00–18:00 ET ET · VFR

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · MVFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 10% · TS12 34% · wind 3 kt · 61°F; 20:00 ET sky clear · PoP12 9% · TS12 9% · wind 4 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 34%, 12 h precipitation probability 10%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 3% · TS12 5% · wind 2 kt · 57°F; 20:00 ET sky partly cloudy · PoP12 9% · TS12 0% · wind 4 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 5%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 100 degrees true, 107 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KSAV METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

FAA WEATHER CONDITIONS

Unavailable — FAA weather timestamp missing or source unavailable

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY Runway reference

Full surveyed runway text remains available here; the current-observation band keeps only the compact wind diagram.

ALL RUNWAYS

10/28 (100/280°M · 093/273°T) · 01/19 (010/190°M · 003/183°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

INFO Facility and verification

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

SOURCE-QUALIFIED FACILITY DETAILS

Runway dimensions / surface	UNAVAILABLE	FBO / provider	UNAVAILABLE
Available services	UNAVAILABLE	Frequencies	UNAVAILABLE
Pattern altitude	UNAVAILABLE		

Verify the current FAA Chart Supplement and provider before flight.

100LL AVAILABILITY AND PRICE

Unavailable — no source-qualified current fuel feed is connected.

Source: not connected. Last updated: unavailable.

Verify price, availability, and service level directly with an FBO.

NOTAM

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). The query failed this run, so the NOTAM list here is unknown rather than empty. Typed state: RATE_LIMITED. The dot colour reports whether this source was read

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KSAV observation was read this run. It describes conditions now, not this trip day.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 25% · TS12 31% · wind 7 kt · 79°F; 20:00 ET sky ovc · PoP12 51% · TS12 28% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 31%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · TS12 56% · wind 7 kt · 74°F; 20:00 ET sky ovc · PoP12 43% · TS12 29% · wind 12 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 56%, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 090 degrees true, 097 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSSI METAR 040255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 39% · wind 6 kt · 79°F; 20:00 ET sky ovc · PoP12 63% · TS12 28% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 28%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 42% · TS12 55% · wind 7 kt · 76°F; 20:00 ET sky ovc · PoP12 49% · TS12 28% · wind 11 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 55%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Unavailable — FAA weather timestamp missing or source unavailable

FAA status unavailable — airport is not covered by this feed (proxy KCHS)

Full surveyed runway text remains available here; the current-observation band keeps only the compact wind diagram.

09/27 (090/270°M · 082/262°T) · 04/22 (040/220°M · 032/212°T) — designators and °M headings are magnetic; °T are true; variation 8°W (NOAA WMM2025)

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

Verify the current FAA Chart Supplement and provider before flight.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and

t a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 21% · wind 9 kt · 78°F; 20:00 ET sky ovc · PoP12 41% · TS12 35% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 35%, 12 h precipitation probability 41%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 46% · wind 10 kt · 75°F; 20:00 ET sky ovc · PoP12 32% · TS12 34% · wind 15 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 46%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 25% · TS12 28% · wind 8 kt · 79°F; 20:00 ET sky ovc · PoP12 51% · TS12 30% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 30%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 55% · wind 8 kt · 76°F; 20:00 ET sky ovc · PoP12 42% · TS12 34% · wind 11 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 55%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 130 degrees true, 137 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KSGJ METAR 040256Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 25% · TS12 41% · wind 6 kt · 77°F; 20:00 ET sky ovc · PoP12 55% · TS12 20% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 50% · TS12 57% · wind 6 kt · 75°F; 20:00 ET sky ovc · PoP12 50% · TS12 32% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 50%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KFIN METAR 040255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · wind 3 kt · 76°F; 20:00 ET sky ovc · PoP12 42% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 49% · wind 4 kt · 73°F; 20:00 ET sky ovc · PoP12 51% · wind 6 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 49%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 170 degrees true, 179 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KMYR METAR 040238Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 55% · TS12 36% · wind 12 kt · 74°F; 20:00 ET sky ovc · PoP12 29% · TS12 36% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 36%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 25% · TS12 31% · wind 10 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 16% · wind 12 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 58% · TS12 36% · wind 12 kt · 75°F; 20:00 ET sky ovc · PoP12 28% · TS12 36% · wind 8 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 36%, 12 h precipitation probability 58%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 22% · TS12 31% · wind 10 kt · 72°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 16% · wind 13 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

10 sm 26 °C 24 °C Calm · METAR measured: KCRG METAR 040243Z

WIND VS RUNWAYS

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KCRG METAR 040243Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

an outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 41% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 60% · TS12 23% · wind 7 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 23%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 59% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 49% · TS12 31% · wind 6 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 59%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KECP METAR 040253Z

KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KECP METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature. It is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 42% · wind 6 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 42% · TS12 19% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 46% · TS12 51% · wind 6 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 42% · TS12 32% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 51%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - VFR** scattered 6,500 ft, broken 8,000 ft, overcast 11,000 ft METAR observed / retrieved: 2026-09-04T02:53:00+00:00

10 sm 28 °C 24 °C 270° true at 5 kt · METAR measured: KPNS METAR 040253Z

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 270 degrees true, 272 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 26. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 26 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air

Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00:00 ET ET · MVFR

00:00 ET ET · MVFR

00:00 ET ET · IFR

00:00 ET ET · IFR

00:00–06:00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 41% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 36% · TS12 26% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · TS12 45% · wind 6 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 30% · wind 8 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 45%, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

FRI 04 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Fri 04 Sep 00Z cycle · file published Fri 04 Sep 02Z, read from the image response, which places it in the Fri 04 Sep 00Z cycle, which is the computed cycle · valid Fri 04 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind direction is reported variable at 3 knots, so no arrow is drawn and no runway is marked as favoured. Wind source: KDAB METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 52% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 37% · TS12 17% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 52%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 52% · wind 5 kt · 75°F; 20:00 ET sky ovc · PoP12 49% · TS12 32% · wind 8 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 9% · TS12 50% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 17% · wind 9 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover clear, 12 h thunderstorm probability 50%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 14% · TS12 36% · wind 7 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 28% · TS12 13% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover clear, 12 h thunderstorm probability 36%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 100 degrees true, 106 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KTPF METAR 040255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

12 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTPF this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 9% · TS12 50% · wind 4 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 12% · wind 7 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 50%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 16% · TS12 39% · wind 4 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 31% · TS12 15% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 16%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 130 degrees true, 136 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

NOTAMs

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

7 Act on

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSRQ this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

00:00–06:00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 14% · TS12 51% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 20% · TS12 21% · wind 9 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover clear, 12 h thunderstorm probability 51%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 12% · TS12 36% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 20% · TS12 13% · wind 9 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover clear, 12 h thunderstorm probability 36%, 12 h precipitation probability 12%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 100 degrees true, 106 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KVNC METAR 040255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and

ot a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 18% · TS12 65% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 22% · wind 9 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 65%, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Mon, Sep 7 · Whole-day rough outlook:

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 13% · TS12 47% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 14% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted MVFR from sky cover clear, 12 h thunderstorm probability 47%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

⚠ Wind calm

☹ No runway is wind-favoured

KJKA METAR 040255Z

KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KJKA METAR 040255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 32% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 35% · TS12 28% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 32%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · TS12 38% · wind 5 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 31% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 38%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

Wind calm

WPC: No change in wind forecast

KBFM METAR 040253Z

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KBFM METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 40% · wind 3 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 35% · TS12 28% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 40%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 45% · wind 4 kt · 78°F; 20:00 ET sky clear · PoP12 26% · TS12 29% · wind 6 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 45%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

160° true at 5 kt · METAR measured: KGPT METAR 040253Z

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 160 degrees true, 161 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KGPT METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 35% · wind 3 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 33% · TS12 23% · wind 7 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 35%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of-against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 43% · wind 4 kt · 76°F; 20:00 ET sky clear · PoP12 28% · TS12 27% · wind 6 kt · 88°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of-against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ Forecast evidence

METAR

TAF

TAF — the Terminal Aerodrome Forecast, the

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

On its own, so KOP is used as a proxy, that is a normal condition, not a failure.

weather, and they never change a night category. NOTAMs were read for KHSA this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 21% · wind 3 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 29% · wind 5 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 21%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · wind 4 kt · 75°F; 20:00 ET sky clear · PoP12 28% · wind 5 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - VFR** · clear below 12,000 ft (CLR) · METAR observed / retrieved: 2026-09-04T02:53:00+00:00

10 sm 29 °C 24 °C 160° true at 4 kt · METAR measured: KNEW METAR 040253Z

WIND VS RUNWAYS

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 160 degrees true, 161 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 18R and 18L. Wind source: KNEW METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 13% · TS12 32% · wind 7 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 12% · wind 7 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 32%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 36% · wind 10 kt · 83°F; 20:00 ET sky clear · PoP12 35% · TS12 21% · wind 10 kt · 88°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 36%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ Wind calm

000. No runway is wind-favoured

KOPF METAR 040253Z

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KOPF METAR 040253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

technical transport environment remains
preprod. Limited 2026-07-30 spot check
covered KLZU, KAVL, and KSGJ (3 of 30
airports). NOTAMs were read from this source
and used on this card this run. Typed state:
OK. The dot colour reports whether this
source was read this run; technical
environment: preprod.

89 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

describes conditions now, not this trip day.

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 21% · TS12 61% · wind 7 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 23% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 61%, 12 h precipitation probability 21%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 60% · wind 5 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 39% · TS12 35% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 60%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

METAR measured: KHPN METAR 040256Z

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 040256Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

75 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · IFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

00:00–06:00 ET ET · VFR

06:00–12:00 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 13% · TS12 9% · wind 9 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 1% · TS12 6% · wind 10 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 9%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 2% · wind 6 kt · 63°F; 20:00 ET sky clear · PoP12 1% · TS12 0% · wind 9 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KBED METAR 040251Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 33% · TS12 19% · wind 7 kt · 59°F; 20:00 ET sky partly cloudy · PoP12 4% · TS12 5% · wind 12 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 19%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 1% · wind 4 kt · 60°F; 20:00 ET sky clear · PoP12 3% · TS12 0% · wind 9 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: ok; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

 - Extended outlook and hazard-feed states are reported in the source stamp.
 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 17 SIGMET records, 38 G-AIRMET records. Regional current observations (not corridor forecasts): Atlantic North: MVFR at KCRG; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 040256Z AUTO . AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 120/120 airport-days; planned-window board coverage 4/4; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=17, G-AIRMET=38, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=25, RATE_LIMITED=5; normalized records=743; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary (FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT)

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip-window feasibility evidence (Derived): 2 of 4 active trip days carry a forecast flight category and 2 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time. 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking.
- KLZU current observation: VFR — conditions now, not a trip day. 55 hazard areas retained a coordinate ring this run, 55 of them valid inside the trip window, by the geometric test named below. KLZU: 7 of 24 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 4 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 2 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 4, 06:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sat Sep 5, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- Sun Sep 6, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/4 d), KBED IFR (2/4 d), KBFM IFR (2/4 d), KCRE VFR (2/4 d), KCRG IFR (2/4 d), KDAB VFR (2/4 d), KECP MVFR (2/4 d), KFIN VFR (2/4 d), KGKT VFR (2/4 d), KGPT MVFR (2/4 d), KHPN IFR (2/4 d), KHSa MVFR (2/4 d); 17 further airports in section 2.
- NOTAMs: 24 of 29 destinations report an active NOTAM; 5 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 55 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 55 of 55 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 62 NM. valid 2026-09-04 03:38Z to 2026-09-04 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 85 NM. valid 2026-09-04 02:45Z to 2026-09-04 09:00Z.
- SIGMET 22E — CONVECTIVE: contains KSHD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 17 NM, KROA 53 NM. valid 2026-09-04 03:55Z to 2026-09-04 05:55Z.
- SIGMET 29C — CONVECTIVE: contains KBFM, KJKA, KPNS (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KECP 34 NM, KGPT 39 NM, KNEW 87 NM. valid 2026-09-04 03:55Z to 2026-09-04 05:55Z.
- SIGMET PAPA 2 — TURB: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 92 NM. valid 2026-09-04 01:17Z to 2026-09-04 05:17Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KJKA 4 NM, KPNS 15 NM, KBFM 25 NM, KNEW 32 NM, KGPT 55 NM, KECP 79 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 02:45Z to 2026-09-04 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KROA 14 NM, KCRE 48 NM, KSHD 51 NM, KMYR 62 NM, KTRI 85 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 02:45Z to 2026-09-04 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KSHD 33 NM, KROA 35 NM. valid 2026-09-04 03:38Z to 2026-09-04 09:00Z.
- G-AIRMET TANGO — LLWS: boundary within 100 NM of KSHD 15 NM, KROA 68 NM. valid 2026-09-04 02:45Z to 2026-09-04 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 42 NM, KHPN 97 NM. valid 2026-09-04 03:38Z to 2026-09-04 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KSHD 13 NM, KHPN 47 NM, KROA 57 NM. valid 2026-09-04 03:38Z to 2026-09-04 09:00Z.
- SIGMET 23E — CONVECTIVE: boundary within 100 NM of KHPN 30 NM. valid 2026-09-04 03:55Z to 2026-09-04 05:55Z.
- SIGMET 26E — CONVECTIVE: boundary within 100 NM of KOPF 39 NM, KDAB 95 NM. valid 2026-09-04 03:55Z to 2026-09-04 05:55Z.
- 42 of 55 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 17, G-AIRMET 38, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-04T04:35:28.339420+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 7 of 24 current NOTAMs are new by that baseline — A0329/26 (OTHER, last_updated_at 2026-09-01T12:42:00+00:00); A0332/26 (OTHER, last_updated_at 2026-09-02T18:09:00+00:00); A0333/26 (OTHER, last_updated_at 2026-09-03T09:34:00+00:00); 09/006 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0335/26 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0336/26 (OTHER, last_updated_at 2026-09-03T15:59:00+00:00); 09/008 (OBSTRUCTION, last_updated_at 2026-09-04T03:35:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
