METAR — the routine hourly observation report issued hourly by the observing office. It contains SPECI reports off-peak. METARs include current conditions: visibility, wind, temperature, dewpoint, and cloud cover. Issued by the observing office, METARs are not a forecast, and they describe conditions right now. The KLZU observation was read this run; it describes conditions now, not this trip day.

NWS hourly gridpoint forecast for the Weather Service digital forecast cell containing KLZU, updated hourly and reaching about 156 miles from the airport. It includes by-hour sky, wind and pressure. This is the spine of the forecast on this board. The NWS hourly forecast reaches this day.

GFS MOS (Model Output Statistics) — the GFS model output statistics, produced by the National Centers for Environmental Prediction every day in three-hour cycles. It carries a forecast category, so this is a forecast. The flight category is not a forecast, so this is not a forecast. The flight category corroborates the forecast.

GFA (Global Forecast of Airframe) — Forecast of Airframe (GFA) Predictions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — the routine hourly observation of weather conditions at an airport. Issued hourly by the observing office. It includes information on visibility, wind, temperature, dewpoint, and other weather elements. It is not a forecast, and it describes conditions right now, not this trip day.

NWS hourly gridpoint forecast — the National Weather Service digital forecast for a specific grid cell containing KLZU, updated throughout the day and reaching about 156 hours. It includes by-hour sky, wind and precipitation forecasts. It is the spine of the change view on this board. The NWS hourly gridpoint forecast reaches this day.

SHORT TERM

..
(Today through Friday)
Issued at 313 AM EDT Thu Sep 3 2026

A high pressure regime will remain in place over the Southeast through the short term period. Upper level ridging moving away to the east being quickly replaced by a second upper ridge amplifying over the central CONUS. Warmer than normal temperatures will continue, with high temperatures this afternoon rising into the mid

to upper 90s in all but the far northeastern mountains. With dewpoints also remaining in the upper 60s to low 70s, heat index values will peak in the low to mid 100s this afternoon. In addition to temperatures between 12-15 degrees above daily normals, portions of northwest Georgia will also see heat indices climb to as high as 106 degrees. Because of this, a Heat Advisory remains in effect for far the far northwest corner of the state until 8 PM EDT this evening.

Surface high pressure under the ridge and centered to the northeast of the forecast area will begin to break down today. With the high weakening, there will be a slight uptick in rain chances this afternoon. Isolated showers and thunderstorms will be most likely in portions of east-central Georgia and in the mountains, but cannot be ruled out across the forecast area. Model guidance continues to indicate a band of deeper moisture associated with a frontal boundary moving northward out of the Gulf on Friday. The influence of the ridge will keep this boundary stalled across south-central Georgia, and continue to suppress convection in the northern half of the forecast area. However, scattered thunderstorms will be able to develop in the vicinity of the boundary and spread into central Georgia, with the highest chances in areas along and south of a line from Columbus to Macon.

LONG TERM

..
(Friday night through Wednesday)
Issued at 313 AM EDT Thu Sep 3 2026

The weekend will start off with a day of transition, as the stubborn mid-level ridge that has been over the region starts getting kicked westward by a deep trough over the Eastern US seaboard. Despite the waning influence of the ridge, temperatures will still rise to the mid 90s, with heat index values in the low 100s. Enough instability should develop and beat out the subsidence of the ridge to support isolated to scattered afternoon showers and storms across the area. Its still very low confidence at this point, but with strengthening northerly flow over the area, there is potential for a line of strong to severe storms to drop in from the north during the late evening or overnight hours.

Rain and thunderstorm chances increase even more on Sunday, as a frontal boundary pushes into the area out of the Carolinas, running into the warm and moist airmass (PWATs around 2") in place over Georgia. Depending on the timing of this frontal passage, we could see a threat for strong to severe storms. Temperatures will likely reach into the low to mid 90s, with heat index values in the upper 90s to low 100s. Dry air will start to filter in behind the front on Monday, but lingering moisture could support isolated to scattered afternoon showers and storms. With the drier and cooler air, there'd be a bit of relief from the heat, with highs likely topping out in the mid to upper 80s. Unfortunately, this relief looks short-lived, as model guidance is in decent agreement on the ridge building back across the Southeast by the middle of next week, with highs returning into the 90s, and generally low rain chances.

- **Sun, Sep 6 • Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 38%, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. - h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 21%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 350 degrees true, 359 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 030854Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 16% · TS12 12% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 33% · TS12 23% · wind 12 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 31%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 010 degrees true, 017 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. Wind source: KSAV METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovca · PoP12 12% · TS12 24% · wind 7 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 5% · wind 9 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 23%, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 19% · TS12 43% · wind 6 kt · 79°F; 20:00 ET sky ovc · PoP12 56% · TS12 17% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 19%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KHXD METAR 030835Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 20% · TS12 19% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 31% · TS12 22% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 19%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 330 degrees true, 337 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 31. Wind source: KSGJ METAR 030856Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 33% · TS12 56% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 58% · TS12 20% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 56%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KFIN METAR 030835Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

WIND VS RUNWAYS

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 340 degrees true, 349 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 42% · TS12 30% · wind 13 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 34% · wind 10 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 30%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 24%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KCRG METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 340 degrees true, 342 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 46% · TS12 67% · wind 4 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 65% · TS12 28% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

12 h thunderstorm probability 67%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 090 degrees true, 097 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 07L and 07R. Wind source: KDAB METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

WIND VS RUNWAYS

KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 090 degrees true, 096 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. Wind source: KSPG METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

METAR

METAR — the routine surface observation

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KPIE is used as a proxy; that is a normal condition, not a failure.

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSPG this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 8% · TS12 37% · wind 7 kt · 83°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 11% · wind 11 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 080 degrees true, 086 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KTPF METAR 030835Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

- rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 62% · wind 4 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 24% · wind 6 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 100 degrees true, 106 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 030841Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

2 h thunderstorm probability 44%, 12 h precipitation probability 17%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KVNC METAR 030835Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 26% · TS12 59% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 31% · TS12 14% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 59%, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 46% · wind 4 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 24% · TS12 28% · wind 7 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KGPT METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

WIND VS RUNWAYS

KHSA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. No usable wind observation for this airport in this run, so no arrow is drawn and no runway is marked as favoured. Wind source: METAR wind unavailable — source state: unavailable.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

WIND VS RUNWAYS

KNW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KNEW METAR 030853Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 030851Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 19% · TS12 6% · wind 10 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 2% · TS12 8% · wind 10 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 6%, 12 h precipitation probability 19%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 18% · wind 8 kt · 60°F; 20:00 ET sky partly cloudy · PoP12 1% · TS12 6% · wind 13 kt · 62°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 18%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 3% · wind 4 kt · 58°F; 20:00 ET sky clear · PoP12 4% · TS12 1% · wind 8 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 3%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 49 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Mountain: MVFR at KSHD; Gulf West: category unavailable at KHSA; Long-range: IFR/LIFR at KHPN, KBED; Long-range: category unavailable at KOPF.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary (FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT)

- A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.
- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
 - Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 1 of 4 active trip days; 3 reach no category-capable product at this lead time.
 - Trip-window feasibility evidence (Derived): 1 of 4 active trip days carry a forecast flight category and 3 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day. KLZU: 3 of 20 current NOTAMs are new by the stated 72-hour publication window.
 - 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 62 hazard areas retained a coordinate ring this run, 0 of them valid inside the trip window, by the geometric test named below.

Full evidence, unchanged: the five parts in the owner's order

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 1 of 4 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 3 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 4, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- Sat Sep 5, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sun Sep 6, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 1 of 4 active trip days; 3 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (1/4 d), KBED MVFR (1/4 d), KBFM VFR (1/4 d), KCRE MVFR (1/4 d), KCRG LIFR (1/4 d), KDAB MVFR (1/4 d), KECP VFR (1/4 d), KFIN MVFR (1/4 d), KGKT VFR (1/4 d), KGPT VFR (1/4 d), KHPN VFR (1/4 d), KHSA VFR (1/4 d); 17 further airports in section 2.
- NOTAMs: 24 of 29 destinations report an active NOTAM; 5 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 62 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- None of the 62 retained hazard areas is valid inside the planned trip window. SIGMETs, G-AIRMETs and CWAs are short-fuse products, so what follows describes conditions now and in the next few hours — it is not a forecast for the trip, and it must not be read as one.

- 43 of 62 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 12, G-AIRMET 49, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-03T10:19:37.497782+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 3 of 20 current NOTAMs are new by that baseline — A0329/26 (OTHER, last_updated_at 2026-09-01T12:42:00+00:00); A0332/26 (OTHER, last_updated_at 2026-09-02T18:09:00+00:00); A0333/26 (OTHER, last_updated_at 2026-09-03T09:34:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
