- GFA
- NOTAM

METAR — issued hourly, highest visibility, wind, and temperature. Issued by the National Weather Service (NWS) and not a forecast. KLZU observations describe conditions now, not this trip day.

TAF — The NWS issues hourly TAFs for the next 24 hours. The NWS hourly TAF covers part of this day.

NWS hourly gridpoint forecast for the KLZU area, reaching about 156 miles. It is the spine of the forecast for this board. The NWS hourly forecast reaches this day.

GFS MOS (Model Output Statistics) — the GFS model output statistics, produced by the National Weather Service. It carries a three-hour forecast category, so this forecast is the flight category. It corroborates the forecast.

GFA (Global Forecast of Airframe) — Forecast of aircraft performance. Predictions of National Weather Service surface winds, temperature, and pressure. This page is an office of the National Weather Service.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

METAR — issued hourly, with a SPECI report if conditions change. Issued by the National Weather Service, not a forecast. KLZU observations describe conditions now, not this trip day.

TAF — The National Weather Service digital forecast cell containing KLZU, updated every 6 hours and reaching about 156 miles. TAFs are the spine of the trip day. The NWS hourly forecast covers part of this day.

NWS hourly gridpoint forecast for the GFS model, updated every 6 hours by the National Weather Service. It carries a flight category, so this is the flight category. The flight category corroborates the forecast.

GFS MOS (Model Output Statistics) — Forecast by the National Weather Service. Surface pressure, temperature, and other data. This page displays the forecast. The forecast is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

METAR — the routine hourly observation issued hourly by the observing office. It contains SPECI reports off-airport, and visibility, wind, temperature, dewpoint, and other weather data. Issued by the observing office, it is not a forecast, and it is the spine of the change weather. The NWS hourly gridpoint forecast for this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Thu Sep 3 · 12:00 AM ET.

NWS hourly gridpoint forecast — the Weather Service digital forecast for this cell containing KLZU, updated through the day and reaching about 156 hours. It contains by-hour sky, wind and precipitation, and it is the spine of the change weather. The NWS hourly gridpoint forecast for this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Thu Sep 3 · 12:00 AM ET.

GFS extended range forecast — the twelve-hourly Coarse Resolution Numerical Weather Prediction (C-NAO) model, a long-range forecast. This product is published every 12 hours, and it is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

GFA and TFRs — Forecast of Adverse Conditions (GFA) and Terminal Forecast of Adverse Conditions (TFRs), issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

GFS MEX predicts VFR for this window — a prediction, not a flight category; MEX publishes no ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. METAR — the routine observation report issued hourly by the National Weather Service. It includes current conditions, visibility, wind, temperature, and other relevant data. Issued by the observing station, it is not a forecast, and conditions right now. The KLZU observation was read this run. It describes conditions now, not this trip day.

Precipitation probability (PoP) 3–10%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

NWS hourly gridpoint forecast — the National Weather Service digital forecast for a specific cell containing KLZU, updated throughout the day and reaching about 156 hours. It includes by-hour sky, wind and precipitation forecasts, and it is the spine of the change view on this board. The NWS hourly gridpoint forecast reaches this day.

Precipitation probability (PoP) 3–10%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

GFS extended range forecast — Coarse resolution, numerical model output, a long range outlook. This product publishes short-range outlooks for flight categories, including thunderstorms, but is shown with a value.

Precipitation probability (PoP) 10–30%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

GFA and GFS — Forecast Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

Precipitation probability (PoP) 10–30%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

Precipitation probability (PoP) 10–30%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

Issued at 240 PM EDT Fri Sep 4 2026

By Sun morning the Bermuda ridge centered off the GA/SC coast will have weakened...

SHORT TERM

..
(This afternoon through Saturday)

Issued at 240 PM EDT Fri Sep 4 2026

Cumulus field currently across the area with isolated to scattered showers and thunderstorms possible through the remainder of the evening. Coverage is expected to be higher over central Georgia where there is more instability and moisture available for showers and thunderstorms. The main threats with these storms will be gusty winds. With lingering moisture into the morning hours central Georgia will likely see low clouds tomorrow morning like this morning.

Pushing into tomorrow, pattern will begin to change as the ridging shifts westward and the backdoor front begins to push into the northeast into Sunday. Coverage of showers and thunderstorms could be slightly more elevated tomorrow over northern Georgia with isolated to scattered coverage possible. With this comes a marginal risk over much of the northeast and eastern portions of Georgia stretching down into the metro ATL area. A few isolated storms could become strong to severe with the main threats being strong to locally damaging wind gusts. There area some models indicating the potential for a cluster of storms to push into the northeast late Saturday night into Sunday morning but will need to keep an eye on this solution as confidence remains low.

Heat will be the main impact through this weekend as temperatures continue to be in the mid to upper 90s across the area and heat index values soar into the mid 100s over much of the area. A heat advisory is in effect through Saturday evening for much of the area with the exception of the higher elevations in northeast Georgia. Make sure to take precautions if you are out in the heat this weekend!&&

LONG TERM

..
(Sunday morning through next Thursday)
Issued at 240 PM EDT Fri Sep 4 2026

By Sun morning the Bermuda ridge centered off the GA/SC coast will have weakened enough to allow a backdoor cold front to move SW out of the Carolinas and into NE GA Sun afternoon. This front is fairly weak and loses a lot of its strength as it pushes into the old weakening ridge, but it will be a catalyst for increased precip chances Sun/Mon. Instability indices stay fairly weak as well so not expecting much in the way of severe storms Sun afternoon/evening. Would not be surprised to see a strong storm or two as we are still in summer convection season. Slightly cooler air moves into the area behind the frontal boundary Monday, as a ridge of high pressure centered over Hudson Bay sinks southward into the Mid-Atlantic states. This ridge sets up like a wedge down the eastern seaboard with cooler easterly flow sting up across GA and the Carolinas Mon/Tue. There still remains the potential for diurnal convection,

Mon, with things drying out a bit for Tue/Wed/Thu.

Little change in the temperature trends are likely through the weekend with temps in the middle to upper 90s through Sunday. Will see slightly cooler temps Mon/Tue/Wed after the frontal boundary passes through with highs in the 80s to lower 90s. Temps rise back into the middle 90s by the end of next week.&&

...Afternoon Area Forecast Discussion...

.KEY MESSAGES...

- Above normal temperatures and triple digit heat indices stick around through Saturday. A Heat Advisory is in effect across north and central Georgia through Saturday evening.
- Isolated to scattered showers and thunderstorms will develop this afternoon across portions of Central Georgia.
- Daily chances for showers and thunderstorms continue over the weekend into early next week.

&&

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 39% · wind 3 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 4% · TS12 30% · wind 6 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 23% · wind 7 kt · 69°F; 20:00 ET sky ovc · PoP12 25% · TS12 20% · wind 7 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 20%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

FRI 04 SEP

12:00–18:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface analysis, F+000 h from the Fri 04 Sep 18Z cycle · file published Fri 04 Sep 20Z, read from the image response, which places it in the Fri 04 Sep 18Z cycle, which is the computed cycle · valid Fri 04 Sep 18Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface analysis raster chart for F+000 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

18:00–00:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Fri 04 Sep 18Z cycle · file published Fri 04 Sep 20Z, read from the image response, which places it in the Fri 04 Sep 18Z cycle, which is the computed cycle · valid Sat 05 Sep 00Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface prog raster chart for F+006 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

SAT 05 SEP

00:00–06:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+012 h from the Fri 04 Sep 18Z cycle · file published Fri 04 Sep 20Z, read from the image response, which places it in the Fri 04 Sep 18Z cycle, which is the computed cycle · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface prog raster chart for F+012 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+018 h from the Fri 04 Sep 18Z cycle · file published Fri 04 Sep 20Z, read from the image response, which places it in the Fri 04 Sep 18Z cycle, which is the computed cycle · valid Sat 05 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind direction is reported variable at 6 knots, so no arrow is drawn and no runway is marked as favoured. Wind source: KTRI METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 43% · wind 5 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 13% · TS12 26% · wind 6 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 43%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 20% · wind 5 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 9% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 20%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 300 degrees true, 309 degrees magnetic, at 10 knots gusting 17 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 041954Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky ovc · PoP12 34% · TS12 40% · wind 6 kt · 74°F; 20:00 ET sky ovc · PoP12 30% · TS12 35% · wind 8 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 11% · TS12 29% · wind 8 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 12% · TS12 1% · wind 7 kt · 73°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KGKT METAR 041936Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- (s) for this ET day · 08:00 ET sky partly cloudy · PoP12 40% · wind 1 kt · 71°F; 20:00 ET sky partly cloudy · PoP12 4% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · wind 5 kt · 70°F; 20:00 ET sky ovc · PoP12 26% · wind 5 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 320 degrees true, 330 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KSHD METAR 041935Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky ovc · PoP12 26% · TS12 26% · wind 5 kt · 65°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 25% · wind 5 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 26%, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 12% · wind 3 kt · 61°F; 20:00 ET sky clear · PoP12 7% · TS12 1% · wind 5 kt · 71°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted VFR from sky cover clear, 12 h thunderstorm probability 12%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ Wind variable 4 kt

no prevailing direction reported

KSAV METAR 041935Z

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind direction is reported variable at 4 knots, so no arrow is drawn and no runway is marked as favoured. Wind source: KSAV METAR 041935Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 7% · TS12 26% · wind 7 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 16% · wind 9 kt · 81°F. The single value shown is the least favourable of those published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 26%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 60% · TS12 45% · wind 8 kt · 75°F; 20:00 ET sky ovc · PoP12 34% · TS12 38% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover ovc, 12 h thunderstorm probability 45%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KSSI METAR 041935Z

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 120 degrees true, 127 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KSSI METAR 041935Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 27% · wind 6 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 40% · TS12 24% · wind 8 kt · 82°F. The single value shown is the least favourable of those published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 27%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 63% · TS12 42% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 53% · TS12 42% · wind 10 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 42%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 170 degrees true, 178 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KJZI METAR 041935Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

point, it is not a flight category because MEX published no ceiling or visibility for them.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 8% · TS12 19% · wind 9 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 47% · TS12 21% · wind 8 kt · 81°F. The single value shown is the least favourable of those published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 19%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 55% · wind 5 kt · 75°F; 20:00 ET sky ovc · PoP12 43% · TS12 36% · wind 12 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover ovc, 12 h thunderstorm probability 55%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 160 degrees true, 168 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 21. Wind source: KHXD METAR 041950Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

12-hour outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 8% · TS12 21% · wind 8 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 39% · TS12 20% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted VFR from sky cover clear, 12 h thunderstorm probability 21%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Mon, Sep 7 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 59% · TS12 48% · wind 7 kt · 77°F; 20:00 ET sky ovc · PoP12 38% · TS12 39% · wind 10 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 48%, 12 h precipitation probability 59%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 140 degrees true, 147 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KSGJ METAR 041956Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 40% · wind 6 kt · 77°F; 20:00 ET sky ovc · PoP12 36% · TS12 20% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 40%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 38% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 59% · TS12 39% · wind 7 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 100 degrees true, 107 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. Wind source: KFIN METAR 041950Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- (s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 31% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 41% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 60% · wind 6 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover ovc, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KMYR METAR 041953Z

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 180 degrees true, 189 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KMYR METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 25% · wind 12 kt · 80°F; 20:00 ET sky ovc · PoP12 53% · TS12 39% · wind 10 kt · 80°F. The single value shown is the least favourable of those

published no ceiling or visibility for them.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 39%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 55% · TS12 52% · wind 10 kt · 74°F; 20:00 ET sky ovc · PoP12 35% · TS12 33% · wind 13 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND: Blowing From: 160° True

KCRE METAR 041953Z

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 160 degrees true, 169 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 25% · wind 13 kt · 81°F; 20:00 ET sky ovc · PoP12 53% · TS12 39% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; no ceiling or visibility for them.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 39%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 52% · wind 8 kt · 73°F; 20:00 ET sky ovc · PoP12 34% · TS12 33% · wind 14 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 130 degrees true, 137 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KCRG METAR 041938Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

is not a flight category because MEX published no ceiling or visibility for them.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 34% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 39% · TS12 23% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 34%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 62% · TS12 41% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 59% · TS12 40% · wind 7 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover ovc, 12 h thunderstorm probability 41%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

DIST237 nm

Current observation **OBS - VFR**  few 9,500 ft, broken 11,000 ft METAR observed / retrieved: 2026-09-04T19:53:00+00:00

 10 sm  26 °C  24 °C  90° true at 6 kt · METAR measured: KECP METAR 041953Z

WIND VS RUNWAYS

KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 090 degrees true, 093 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KECP METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 63% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 29% · TS12 20% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 63%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 37% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 57% · TS12 33% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 190 degrees true, 192 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. Wind source: KPNS METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 44% · TS12 55% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 40% · TS12 35% · wind 8 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 55%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 47% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 37% · TS12 33% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 47%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 100 degrees true, 107 degrees magnetic, at 8 knots gusting 19 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 07L and 07R. Wind source: KDAB METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 31% · TS12 50% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 29% · TS12 23% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 50%, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 32% · TS12 41% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 60% · TS12 31% · wind 8 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 250 degrees true, 256 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 25. Wind source: KSPG METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

it is not a flight category because MEX published no ceiling or visibility for them.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky clear · PoP12 12% · TS12 44% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 12% · wind 8 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover clear, 12 h thunderstorm probability 44%, 12 h precipitation probability 12%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 6% · TS12 35% · wind 7 kt · 83°F; 20:00 ET sky partly cloudy · PoP12 26% · TS12 10% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover clear, 12 h thunderstorm probability 35%, 12 h precipitation probability 6%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 210 degrees true, 216 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KTPF METAR 041935Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

0 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky clear · PoP12 13% · TS12 46% · wind 3 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 13% · TS12 11% · wind 6 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover clear, 12 h thunderstorm probability 46%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 7% · TS12 37% · wind 5 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 31% · TS12 10% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 240 degrees true, 246 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KSRQ METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky clear · PoP12 13% · TS12 42% · wind 5 kt · 79°F; 20:00 ET sky clear · PoP12 17% · TS12 13% · wind 9 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover clear, 12 h thunderstorm probability 42%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 7% · TS12 36% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 21% · TS12 10% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover clear, 12 h thunderstorm probability 36%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 200 degrees true, 206 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KVNC METAR 041935Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

point, it is not a flight category because MEX published no ceiling or visibility for them.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 17% · TS12 52% · wind 5 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 16% · wind 8 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 52%, 12 h precipitation probability 17%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 7% · TS12 48% · wind 6 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 18% · TS12 10% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover clear, 12 h thunderstorm probability 48%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KJKA METAR 041956Z

KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 140 degrees true, 142 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. Wind source: KJKA METAR 041956Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 43% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 51% · TS12 35% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 43%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 35% · TS12 49% · wind 4 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 37% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 49%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 320 degrees true, 322 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KBFM METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 47% · wind 3 kt · 77°F; 20:00 ET sky ovc · PoP12 54% · TS12 33% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 47%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 57% · wind 4 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 24% · TS12 34% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 57%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind direction is reported variable at 4 knots, so no arrow is drawn and no runway is marked as favoured. Wind source: KGPT METAR 041932Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky ovc · PoP12 36% · TS12 43% · wind 3 kt · 76°F; 20:00 ET sky ovc · PoP12 58% · TS12 26% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 43%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 39% · TS12 55% · wind 4 kt · 74°F; 20:00 ET sky clear · PoP12 23% · TS12 29% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 55%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KHSA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 040 degrees true, 041 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KHSA METAR 041950Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky ovc · PoP12 29% · wind 3 kt · 74°F; 20:00 ET sky ovc · PoP12 52% · wind 5 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · wind 3 kt · 74°F; 20:00 ET sky clear · PoP12 23% · wind 5 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 030 degrees true, 031 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 36L and 36R. Wind source: KNEW METAR 041953Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 20% · TS12 50% · wind 7 kt · 82°F; 20:00 ET sky ovc · PoP12 44% · TS12 12% · wind 7 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 50%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · TS12 43% · wind 9 kt · 83°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 28% · wind 9 kt · 89°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 300 degrees true, 307 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 30. Wind source: KOPF METAR 041933Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.
point, it is not a flight category because MEX published no ceiling or visibility for them.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · TS12 68% · wind 7 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 33% · TS12 31% · wind 7 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 68%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 62% · wind 6 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 36% · TS12 37% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 62%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 310 degrees true, 323 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KHPN METAR 041956Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- (s) for this ET day · 08:00 ET sky ovc · PoP12 21% · TS12 5% · wind 7 kt · 63°F; 20:00 ET sky partly cloudy · PoP12 8% · TS12 12% · wind 7 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 5%, 12 h precipitation probability 21%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 2% · wind 6 kt · 63°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 10 kt · 67°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 300 degrees true, 314 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. Wind source: KBED METAR 041951Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 22% · TS12 11% · wind 4 kt · 59°F; 20:00 ET sky partly cloudy · PoP12 6% · TS12 5% · wind 9 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 11%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 3% · wind 4 kt · 59°F; 20:00 ET sky clear · PoP12 0% · TS12 1% · wind 9 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 3%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — [FAA Chart Supplement](#) (current cycle) — see [AirNav](#) link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 25 SIGMET records, 31 G-AIRMET records, 5 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV, KSSI; Atlantic North: MVFR at KCRG; Gulf West: MVFR at KGPT.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 041956Z 10004. AWC METAR state OK for 30/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 90/120 airport-days; planned-window board coverage 4/4; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=25, G-AIRMET=31, CWA=5; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: AUTH_ERROR=30; normalized records=0; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 4 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 2 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 4, 15:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sat Sep 5, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- Sun Sep 6, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/4 d), KBED VFR (2/4 d), KBFM MVFR (2/4 d), KCRE VFR (2/4 d), KCRG IFR (2/4 d), KDAB VFR (2/4 d), KECP MVFR (2/4 d), KFIN VFR (2/4 d), KGKT VFR (2/4 d), KGPT MVFR (2/4 d), KHPN VFR (2/4 d), KHSA MVFR (2/4 d); 17 further airports in section 2.
- NOTAMs: no destination of 29 reports an active NOTAM this run; 29 destination NOTAM queries did not complete. KLZU departure NOTAM state: AUTH_ERROR.

4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 61 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 61 of 61 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- SIGMET 29E — CONVECTIVE: contains KECP (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KPNS 5 NM, KTPF 23 NM, KJKA 31 NM, KSPG 35 NM, KBFM 50 NM, KSRQ 54 NM, KCRG 63 NM, KSGJ 67 NM, KFIN 69 NM, KVNC 72 NM, KDAB 73 NM, KSSI 78 NM, KSAV 97 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 30E — CONVECTIVE: contains KSSI, KDAB, KFIN, KSGJ, KCRG (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSAV 8 NM, KTPF 13 NM, KOPF 16 NM, KVNC 22 NM, KSPG 24 NM, KSRQ 25 NM, KHXD 32 NM, KJZI 77 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 36C — CONVECTIVE: contains KBFM (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KPNS 0 NM, KGPT 11 NM, KJKA 13 NM, KHSA 15 NM, KNEW 36 NM, KECP 68 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 31E — CONVECTIVE: contains KSHD, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 7 NM, KAVL 50 NM, KGKT 74 NM, KCRE 99 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.

- SIGMET 38C — CONVECTIVE: contains KNEW (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHSa 26 NM, KGPT 32 NM, KBFM 62 NM, KJKA 66 NM, KPNS 93 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- CWA 403 — TS over ZMA (Miami): boundary within 100 NM of KOPF 49 NM. valid 2026-09-04 19:43Z to 2026-09-04 21:40Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KNEW 89 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 60 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KECp 6 NM, KPNS 6 NM, KJKA 12 NM, KBFM 12 NM, KGPT 62 NM, KNEW 77 NM, KHSa 81 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KDAB 59 NM, KFIN 67 NM, KSGJ 76 NM, KCRG 89 NM, KOPF 97 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KAVL 2 NM, KGKT 21 NM, KTRI 54 NM, KCRE 58 NM, KMYR 69 NM, KROA 78 NM, KLZU 93 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 55 NM. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KSHD 60 NM. valid 2026-09-04 20:45Z to 2026-09-05 03:00Z.
- SIGMET 32E — CONVECTIVE: boundary within 100 NM of KOPF 74 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 33E — CONVECTIVE: boundary within 100 NM of KOPF 63 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 36E — CONVECTIVE: boundary within 100 NM of KGKT 19 NM, KLZU 28 NM, KAVL 35 NM, KTRI 76 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 37E — CONVECTIVE: boundary within 100 NM of KGKT 35 NM, KTRI 54 NM, KAVL 89 NM, KLZU 92 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- SIGMET 38E — CONVECTIVE: boundary within 100 NM of KOPF 42 NM. valid 2026-09-04 20:55Z to 2026-09-04 22:55Z.
- 43 of 61 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 25, G-AIRMET 31, CWA 5; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 · New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-04T21:30:15.678076+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU NOTAM query state is AUTH_ERROR, so this run does not know the KLZU NOTAM picture. No new NOTAM count is stated: an incomplete query is not the same as no NOTAMs.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
