**Evidence & limitations**

- METAR source state: ok; observed Oct 25 15:56 ET; retrieved Oct 25 17:38 ET; 102 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.39 inHg.
- Raw METAR: `METAR KLZU 251956Z 06008KT 10SM CLR 21/07 A3039 RMK AO2 SLP297 T02060067 $`
- KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 060 degrees true, 066 degrees magnetic,

at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. Wind source: KLZU METAR 251956Z.

**Important planning / evidence detail (1 warning)**

LEGEND VFR MVFR IFR LIFR Unknown Solid = source-interval category guidance Dashed = lower-confidence outlook Weather icon = surface forecastAll times Eastern (ET), 24-hour clock · “around/after” preserves source precision.

⚠ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Current satellite loop shows mostly clear conditions across the
area with some isolated mid level clouds streaming across N GA. — .. (Tuesday morning through next Saturday)
Issued at 233 PM EDT Sun Oct 25 2026

A quiet start is in store over the long term for our area with a
continuation of the sunny …

SHORT TERM

..
(This afternoon through Monday)
Issued at 233 PM EDT Sun Oct 25 2026

Current satellite loop shows mostly clear conditions across the area with some isolated mid level clouds streaming across N GA. Models continue to show a fairly strong wedge building down the eastern seaboard with the ridge centered over the Mid-Atlantic states. This ridge/wedge is keeping things dry with the overall E to NERLY flow but we are seeing a little bit of moisture return from the Atlantic. This moisture return is keeping RH values above critical fire danger thresholds and we will see some increase cloud cover as we go further into the week. With the wedge building into the area and a low pressure system rotation off the GA/FL coast, the pressure gradient is staying fairly tight across the area creating gusty NE winds. Seeing E to NE winds speeds in the 10-15kt range with gust 20-35kt this afternoon. These winds speeds are expected to diminish overnight but they will pick back up again Mon.

Temps staying in the upper 60s to middle 70s through the short term with morning lows in the 40s to near 50 deg. May see some upper 30s across the NE GA mountains Tonight and again Mon night.

LONG TERM

..
(Tuesday morning through next Saturday)
Issued at 233 PM EDT Sun Oct 25 2026

A quiet start is in store over the long term for our area with a continuation of the sunny and dry conditions through the end of the

upcoming work week. At the mid and upper levels, conditions remain dry, with low RH values associated with a mid-level ridge that will break down by the end of the week. At the surface, a regional high pressure centered over the mid-Atlantic will weaken by mid-week, and will be absorbed into stronger surface high pressure transiting the northeast coast. Ultimately, this setup will continue to support a general northeast wind component channeled along the lee side of the Appalachians into our area through the end of the week.

While we will have slightly moister low levels due to the northeast to east component of our surface winds, some dry air and lower RH values will filter over our area by Tuesday, so we will keep an eye on the need to issue a fire danger statement on this day. Otherwise, temperatures will gradually climb each day through the week, with daytime highs rising from the low to upper 70s up into the low 80s over central Georgia by Friday into Halloween weekend.

Looking ahead to next weekend, guidance suggests a shift in the synoptic pattern becoming more zonally oriented by the end of the week. As far as precipitation is concerned, rain chances do look to be on the increase by the end of the long term, but models are not in agreement with the development or placement of the surface low pressure. As a result, whether we see any precipitation or the extent of coverage will need to be fine tuned as we progress over the next few days. At this time, precipitation chances are still low for Halloween night.

While we will have slightly moister low levels due to the northeast
to east component of our surface winds, some dry air and lower RH
values will filter over our area by Tuesday, so we will keep an eye
on the need to issue a fire danger statement on this day. Otherwise,
temperatures will gradually climb each day through the week, with
daytime highs rising from the low to upper 70s up into the low 80s
over central Georgia by Friday into Halloween weekend.

Looking ahead to next weekend, guidance suggests a shift in the
synoptic pattern becoming more zonally oriented by the end of the
week. As far as precipitation is concerned, rain chances do look to
be on the increase by the end of the long term, but models are not
in agreement with the development or placement of the surface low
pressure. As a result, whether we see any precipitation or the
extent of coverage will need to be fine tuned as we progress over
the next few days. At this time, precipitation chances are still low
for Halloween night.

&&

.AVIATION...
(18Z TAFS)

```
Issued at 1246 PM EDT Sun Oct 25 2026
Mostly clear skies expected to continue through this TAF period
with no precipitation or restrictions to VSBYs. Winds will stay
out of the E to NE with speeds in the 10-15kt range with Gust to
25kt through this afternoon. Speeds will diminish to 10kt or less
overnight then increase again Mon afternoon. Not expecting speeds
to be as elevated Monday.

//ATL Confidence...18Z Update...
Confidence high on all elements.

**Wind favours RWY 05**

060° true · 067° magnetic · 8 kt · also NOTAM-affected: 05 and 23

### Evidence & limitations

- METAR source state: ok; observed Oct 25 16:47 ET; retrieved Oct 25 17:38 ET; 51 min before this run.
- Measured values read from the KGYH METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.41 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGYH runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 060 degrees true, 067 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The wind-favoured end 05 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KGYH METAR 252047Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KGMU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.42 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KGMU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 01/19, 10/28. Wind from 070 degrees true, 077 degrees magnetic, at 10 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KGMU METAR 251953Z.

020° true · 027° magnetic · 7 kt · also NOTAM-affected: 04 and 22

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KGSP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.42 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGSP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22. Wind from 020 degrees true, 027 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The wind-favoured end 04 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KGSP METAR 251953Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.28 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 030 degrees true, 037 degrees magnetic, at 16 knots gusting 22 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. Wind source: KSAV METAR 251953Z.

+ Forecast evidence

METAR

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KSAV observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:55 ET; retrieved Oct 25 17:38 ET; 103 min before this run.
- Measured values read from the KJZI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.30 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 040 degrees true, 048 degrees magnetic, at 15 knots gusting 21 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KJZI METAR 251955Z.

070° true · 079° magnetic · 9G15 kt · also NOTAM-affected: 18 and 36

**Evidence & limitations**

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.35 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 070 degrees true, 079 degrees magnetic, at 9 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 251953Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.33 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 040 degrees true, 049 degrees magnetic, at 14 knots gusting 23 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRE METAR 251953Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

RUNWAY

Effective 2026-09-29T11:56:00Z → 2026-10-31T22:00:00Z

RUNWAY

Effective 2026-09-29T11:57:00Z → 2026-10-31T22:00:00Z

40 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:54 ET; retrieved Oct 25 17:38 ET; 104 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.49 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 020 degrees true, 029 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KROA METAR 251954Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:50 ET; retrieved Oct 25 17:38 ET; 108 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.15 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 360 degrees true, 007 degrees magnetic, at 18 knots gusting 26 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KFIN METAR 251950Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:56 ET; retrieved Oct 25 17:38 ET; 102 min before this run.
- Measured values read from the KGKT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.39 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 020 degrees true, 027 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KGKT METAR 251956Z.

+ Forecast evidence

**METAR**

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KECP observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KECP this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

050° true · 052° magnetic · 9 kt · also NOTAM-affected: 08 and 26

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.24 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 050 degrees true, 052 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 251953Z.

87 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

**METAR**

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

**Evidence & limitations**

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 020 degrees true, 027 degrees magnetic, at 13 knots gusting 24 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 07L and 07R. Wind source: KDAB METAR 251953Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:56 ET; retrieved Oct 25 17:38 ET; 102 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.22 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 030 degrees true, 032 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. Wind source: KJKA METAR 251956Z.

**Current observation**

OBS - VFR

OBSER

METAR

clear below 12,000 ft (CLR)

WIND NE (40°) 8 kt

**TEMPERATURE** 26 °C

**VISIBILITY** 10 sm

**DEWPOINT** 13 °C

**Wind favours RWY 36**

040° true · 042° magnetic · 8 kt · also NOTAM-affected: 14, 32, 18 and 36

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.27 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 040 degrees true, 042 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 14, 32, 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBFM METAR 251953Z.

178 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.25 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 160 degrees true, 161 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KGPT METAR 251953Z.

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.

- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 040 degrees true, 046 degrees magnetic, at 15 knots gusting 25 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSRQ METAR 251953Z.

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:55 ET; retrieved Oct 25 17:38 ET; 103 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 050 degrees true, 056 degrees magnetic, at 17 knots gusting 24 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 251955Z.

8 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KNEW this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 25 15:53 ET; retrieved Oct 25 17:38 ET; 105 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 040 degrees true, 047 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 09L and 09R. Wind source: KOPF METAR 251953Z.

DEWPOINT 2 °C

**Wind favours RWY 16**

180° true · 193° magnetic · 5 kt · also NOTAM-affected: 16 and 34

### Evidence & limitations

- METAR source state: ok; observed Oct 25 15:56 ET; retrieved Oct 25 17:38 ET; 102 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.47 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 180 degrees true, 193 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 16 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 251956Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

## 3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 5 SIGMET records, 33 G-AIRMET records, 3 CWA records. Regional current observations (not corridor forecasts): Atlantic South: IFR/LIFR at KSGJ; Atlantic South: MVFR at KFIN; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KDAB.

**Scope:** Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

## 4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

## 5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

## 6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 251956Z 06008. AWC METAR state OK for 33/33 airports; TAF target coverage for 0/33; MOS fetch health GFS 33/33, MEX 33/33; target coverage 33/66 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 0/33; FAA status known for 0/33. Hazard feeds: state=ok; SIGMET=5, G-AIRMET=33, CWA=3; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=33; normalized records=1000; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

## Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

### 1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 23 – Mon Oct 26, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 2 of 2 active trip days in Fri Oct 23 – Mon Oct 26, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

### 2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sun Oct 25, 15:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Oct 26, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

### 3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 32 of 32 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL MVFR (2/2 d), KBED VFR (2/2 d), KBFM VFR (2/2 d), KCRE VFR (2/2 d), KCRG IFR (2/2 d), KDAB IFR (2/2 d), KECP VFR (2/2 d), KFIN IFR (2/2 d), KGKT VFR (2/2 d), KGMU VFR (2/2 d), KGPT VFR (2/2 d), KGSP VFR (2/2 d); 20 further airports in section 2.
- NOTAMs: 32 of 32 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

### 4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 41 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 33 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 41 of 41 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET TANGO — TURB-HI: contains KECP, KBFM, KPNS, KGPT, KJKA, KHSA, KNEW (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSPG 94 NM, KSRQ 97 NM. valid 2026-10-25 20:45Z to 2026-10-26 03:00Z.
- SIGMET 26E — CONVECTIVE: contains KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KVNC 67 NM, KSRQ 83 NM, KDAB 95 NM, KTPF 95 NM, KSPG 98 NM. valid 2026-10-25 20:55Z to 2026-10-25 22:55Z.
- CWA 503 — TS over ZMA (Miami): boundary within 100 NM of KOPF 90 NM. valid 2026-10-25 20:19Z to 2026-10-25 22:15Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KECP 26 NM, KPNS 32 NM, KJKA 58 NM, KBFM 63 NM, KNEW 65 NM, KHSA 86 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-25 20:45Z to 2026-10-26 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KJZI 5 NM, KHXD 14 NM, KTRI 16 NM, KGSP 26 NM, KSSI 28 NM, KGMU 33 NM, KSAV 34 NM, KAVL 35 NM, KGYH 36 NM, KSGJ 42 NM, KCRG 42 NM, KFIN 60 NM, KMYR 65 NM, KDAB 71 NM, KGKT 77 NM, KCRE 77 NM, KROA 97 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-25 20:45Z to 2026-10-26 03:00Z.
- G-AIRMET TANGO — SFC_WND: boundary within 100 NM of KJZI 6 NM, KSSI 7 NM, KDAB 8 NM, KSGJ 8 NM, KFIN 9 NM, KHXD 10 NM, KCRG 11 NM, KSAV 25 NM, KMYR 28 NM, KOPF 33 NM, KCRE 34 NM. valid 2026-10-25 20:45Z to 2026-10-26 03:00Z.
- 35 of 41 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 5, G-AIRMET 33, CWA 3; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

### 5 · New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-25T21:38:15.577245+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 13 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- No service-status wording was found in the published text of the 13 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
