METAR — issued hourly, with a SPECI report if conditions change. Issued by the National Weather Service, not a forecast. KLZU observations describe conditions now, not this trip day.

TAF — The National Weather Service digital forecast cell containing KLZU, updated every 6 hours and reaching about 156 miles. TAFs are issued by the National Weather Service and it is the spine of the forecast for this board. The NWS hourly forecast reaches this day. TAFs cover part of this day.

NWS hourly gridpoint forecast for the National Weather Service digital forecast cell containing KLZU, updated every 6 hours and reaching about 156 miles. TAFs are issued by the National Weather Service and it is the spine of the forecast for this board. The NWS hourly forecast reaches this day. TAFs cover part of this day.

GFS MOS (Model Output Statistics) — the GFS model output statistics, produced by the National Weather Service in three-hour cycles. It carries a forecast category, so this is the flight category. The flight category corroborates the forecast.

GFA and Forecast Predictions — National Weather Service surface forecast predictions are released every 6 hours. This page is run by the National Weather Service office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

SHORT TERM

..

(Today through Sunday)

Issued at 216 AM EDT Sat Sep 5 2026

Heat Concerns Continue:

A very warm and humid airmass for September standards will remain over the area through the weekend. High temperatures today will rise to the mid to upper 90s, with dewpoints in the 70s driving heat index values into the 100-107 range. Given this, a Heat Advisory has been issued for all of North and Central GA outside the northern mountains. On Sunday, the mid-level ridge that has been driving this pattern will start to kick west, but high temps and heat index values will only be 1-3 degrees cooler than today. So, the Heat Advisory may need to be extended through Sunday for some areas. Please be sure to take precautions if you are out in the heat this weekend!

Severe Thunderstorms Possible This Weekend:

The mid-level ridge that kept convection at bay for most of this week will finally be shoved westward this weekend, courtesy of a broad longwave trough over the East Coast. For today, we can expect two areas/timeframes of thunderstorm potential. The first

would be typical scattered summertime pop-up afternoon showers and storms across west-central GA, where moisture has pooled and subsidence from the fleeting ridge is lower. The second area for storms is across north/northeast GA (including portions of the Atlanta metro) from the late afternoon to evening hours. This corridor will have an increasingly unstable airmass with steeper lapse rates as the ridge gets kicked out and a subtle shortwave moves in from the north. Scattered strong to severe storms would be possible, with the primary threat being damaging wind gusts. SPC has the aforementioned corridor of north/northeast GA in a Marginal Risk (Level 1 of 5) for severe weather.

On Sunday, convective activity will ramp up even more, as a shortwave and associated frontal boundary start to move across the area. This forcing, combined with the warm and humid airmass in place out ahead of it, will support scattered to numerous afternoon showers and storms, with generally higher coverage across central GA. Several storms may be strong to severe, with damaging wind gusts as the primary threat. The greatest risk for severe storms will be across east-central GA, where SPC has a Slight Risk (Level 2 of 5) for severe weather. With the potential for repeated rounds of storms and efficient rainfall rates, we'll also have to watch out for localized flash flooding, especially in urban and poor-drainage areas.

LONG TERM

..
(Sunday night through Friday)
Issued at 216 AM EDT Sat Sep 5 2026

Broad long wave trough over the east coast will see a weak shortwave rotate through it that will bring some extra support for thunderstorms along a stalled frontal boundary across parts of north and central Georgia. Surface dewpoints will be in the 60s and 70s allowing for decent instability to develop via surface heating. Storms from this will still be ongoing at the beginning of the long term on Sunday evening and continue into the early overnight hours, especially in parts of central Georgia.

Monday will see a backdoor front continue to slide into the CWA. There is some ensemble spread on just how quickly this front slides into the area, which would have some impacts on what things look like on Monday. The latest NBM mean is a bit cooler showing highs in the mid 80s, but has a 10th percentile in the 70s across eastern Georgia and a 90th approaching or exceeding 90 degrees. Experience would tell me to lean towards the current mean that came in a bit lower as the front likely will be moving in a bit faster than most models have progged. Any PoPs will likely be focused along the front, with best chances currently across east central Georgia. Expect to see some potential changes in the PoPs as confidence in the timing and location of the front grows.

For the rest of the long term through the end of next week, models show the deep ridge over the middle of the country getting pumped up by a deep trough/TPV over the west coast that tapping directly into tropical moisture associated with Hurricane Marie. Anticyclonic rossby wave break along the anticyclonic side of the jet happens over the Midwest as the trough ejects northeastward on

Tuesday. This means the upper level ridge sets up over the south. This is a lot of fancy meteorology talk to explain why the heat will once again start building through the area into the end of next week, with highs well into the 90s. One saving grace may be that moisture takes a bit longer to return, keeping the heat indices below triple digits until the very end of the week.

Area Forecast Discussion
National Weather Service Peachtree City GA
632 AM EDT Sat Sep 5 2026

...New 12Z Aviation Discussion...

.KEY MESSAGES...

- Well above normal temperatures this weekend with heat index values in the triple digits. A Heat Advisory is in effect across most of north and central Georgia through this evening.

- Scattered afternoon and evening thunderstorms will be around this weekend. A few storms may be severe, capable of producing damaging wind gusts.

- Cooler and drier weather moves in early next week, with temperatures warming back to above normal by mid-week.

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 32% · TS12 33% · wind 6 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 21% · TS12 18% · wind 6 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 33%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 030 degrees true, 038 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KTRI METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 010 degrees true, 019 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 051054Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 10% · TS12 23% · wind 6 kt · 65°F; 20:00 ET sky clear · PoP12 8% · TS12 1% · wind 7 kt · 74°F. The single value shown is the least favourable of those points; it

is not a flight category because MEX published no ceiling or visibility for them.

- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 23%, 12 h precipitation probability 10%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KGKT METAR 051056Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 18% · wind 4 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 31% · wind 4 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ Wind calm

0510: 180 degrees to wind observed

KSHD METAR 051055Z

KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSHD METAR 051055Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky clear · PoP12 6% · TS12 7% · wind 3 kt · 59°F; 20:00 ET sky clear · PoP12 2% · TS12 0% · wind 4 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 7%, 12 h precipitation probability 6%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KSAV METAR 051053Z

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 310 degrees true, 317 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 28. Wind source: KSAV METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

00 ET ET · IFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · MVFR

The outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky ovc · PoP12 57% · TS12 62% · wind 7 kt · 75°F; 20:00 ET sky ovc · PoP12 28% · TS12 34% · wind 11 kt · 79°F. The single value shown is the least favourable of those points; it is not a
ing or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 62%, 12 h precipitation probability 57%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 260 degrees true, 267 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KSSI METAR 051055Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) — 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 66% · TS12 56% · wind 6 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 49% · TS12 44% · wind 10 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 56%, 12 h precipitation probability 66%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ Wind calm

0510. No runway is wind-favoured.

KJZI METAR 051055Z

KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KJZI METAR 051055Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

· 18:00–00:00 ET ET · MVFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 61% · wind 12 kt · 74°F; 20:00 ET sky ovc · PoP12 36% · TS12 28% · wind 13 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 61%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ Forecast evidence

METAR

METAR — the routine surface observation

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KSAV is used as a proxy; that is a normal condition, not a failure.

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHXD this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 62%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

0 ET ET · IFR

0 ET ET · VFR

0 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 62% · wind 8 kt · 76°F; 20:00 ET sky ovc · PoP12 30% · TS12 33% · wind 10 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 260 degrees true, 267 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KSGJ METAR 051056Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 52% · TS12 46% · wind 6 kt · 77°F; 20:00 ET sky ovc · PoP12 65% · TS12 39% · wind 9 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 39%, 12 h precipitation probability 65%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

29

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KFIN METAR 051050Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

4 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KFIN this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

0 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 42% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 65% · wind 6 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h precipitation probability 65%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

Wind variable 5 kt

no prevailing direction reported

KMYR METAR 051053Z

18

36

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind direction is reported variable at 5 knots, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

Effective 2026-09-04T04:00:00Z → 2026-10-31T10:00:00Z

51 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

00 ET ET · IFR

00 ET ET · IFR

· 18:00–00:00 ET ET · MVFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

ts) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 54% · wind 10 kt · 73°F; 20:00 ET sky ovc · PoP12 28% · TS12 28% · wind 14 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 54%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 250 degrees true, 259 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 54% · wind 11 kt · 73°F; 20:00 ET sky ovc · PoP12 27% · TS12 28% · wind 14 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 54%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 230 degrees true, 237 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRG METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 57% · TS12 53% · wind 6 kt · 76°F; 20:00 ET sky ovc · PoP12 61% · TS12 42% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 53%, 12 h precipitation probability 57%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky ovc · PoP12 49% · TS12 33% · wind 7 kt · 78°F; 20:00 ET sky ovc · PoP12 62% · TS12 37% · wind 10 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 37%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 030 degrees true, 032 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. Wind source: KPNS METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 42% · TS12 39% · wind 7 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 42% · TS12 35% · wind 9 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - VFR** broken 15,000 ft METAR observed / retrieved: 2026-09-05T10:53:00+00:00

10 sm 25 °C 23 °C 200° true at 3 kt · METAR measured: KDAB METAR 051053Z

WIND VS RUNWAYS

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 200 degrees true, 207 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 25R and 25L. Wind source: KDAB METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 35% · TS12 42% · wind 5 kt · 78°F; 20:00 ET sky ovc · PoP12 58% · TS12 32% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 170 degrees true, 176 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

Current observation **OBS - VFR** · clear below 12,000 ft (CLR) METAR observed / retrieved: 2026-09-05T10:55:00+00:00

10 sm 27 °C 26 °C 160° true at 4 kt · METAR measured: KTPF METAR 051055Z

WIND VS RUNWAYS

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 160 degrees true, 166 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KTPF METAR 051055Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 7% · TS12 37% · wind 5 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 9% · wind 6 kt · 84°F. The single value shown is the least favourable of those

points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 110 degrees true, 116 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KSRQ METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are

0 ET ET · VFR

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSRQ this run.

them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

0 ET ET · VFR

0 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 28% · wind 7 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 13% · TS12 9% · wind 9 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 28%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KVNC this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

chart is unknown rather than absent. Nothing on this page was derived from an image either way.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 41% · wind 7 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 11% · TS12 8% · wind 8 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover clear, 12 h thunderstorm probability 41%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 44% · TS12 34% · wind 5 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 39% · TS12 39% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 34%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))							
Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-09-05T12:44:39.026983Z.

· 18:00–00:00 ET ET · VFR

- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · TS12 39% · wind 3 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 32% · wind 6 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))							
Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KGPT METAR 051053Z

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 360 degrees true, 001 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KGPT METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

WIND VS RUNWAYS

▲ Wind calm

18/36

KHSA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KHSA METAR 051147Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · wind 3 kt · 75°F; 20:00 ET sky clear · PoP12 26% · wind 5 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 350 degrees true, 351 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 36L and 36R. Wind source: KNEW METAR 051053Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 41% · wind 7 kt · 83°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 25% · wind 7 kt · 89°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air
Missions: closures, outages, obstacles and
TFRs, issued continuously by the FAA and
valid until cancelled. On this page they are
advisory evidence about the airport, not
weather, and they never change a flight
category. NOTAMs were read for KOPF this
run.

no-go here is derived from an image. A prog-
chart availability check failed this run, so that
chart is unknown rather than absent. Nothing
on this page was derived from an image either
way.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and
t a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 43% · TS12 66% · wind 5 kt · 81°F; 20:00 ET sky ovc · PoP12 48% · TS12 42% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a
flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 66%, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

[+ MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface analysis, F+000 h from the Sat 05 Sep 12Z cycle · file published Sat 05 Sep 11Z, read from the image response, which places it in the Sat 05 Sep 06Z cycle, not the computed Sat 05 Sep 12Z · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface analysis raster chart for F+000 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

12:00–18:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Sat 05 Sep 12Z cycle · file published Sat 05 Sep 11Z, read from the image response, which places it in the Sat 05 Sep 06Z cycle, not the computed Sat 05 Sep 12Z · valid Sat 05 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 310 degrees true, 323 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 051056Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

46 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

ts) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 7% · wind 6 kt · 63°F; 20:00 ET sky clear · PoP12 0% · TS12 1% · wind 11 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 7%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface analysis, F+000 h from the Sat 05 Sep 12Z cycle · file published Sat 05 Sep 11Z, read from the image response, which places it in the Sat 05 Sep 06Z cycle, not the computed Sat 05 Sep 12Z · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface analysis raster chart for F+000 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

12:00–18:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Sat 05 Sep 12Z cycle · file published Sat 05 Sep 11Z, read from the image response, which places it in the Sat 05 Sep 06Z cycle, not the computed Sat 05 Sep 12Z · valid Sat 05 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KBED METAR 051051Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

no-go here is derived from an image. A prog-chart availability check failed this run, so that chart is unknown rather than absent. Nothing on this page was derived from an image either way.

00 ET ET · VFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · VFR

00 ET ET · VFR

· 12:00–18:00 ET ET · VFR

· 18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 4% · wind 4 kt · 59°F; 20:00 ET sky clear · PoP12 0% · TS12 1% · wind 9 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted VFR from sky cover clear, 12 h thunderstorm probability 4%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-05=GFS, 2026-09-06=GFS, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SAT 05 SEP

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface analysis, F+000 h from the Sat 05 Sep 12Z cycle · file published Sat 05 Sep 11Z, read from the image response, which places it in the Sat 05 Sep 06Z cycle, not the computed Sat 05 Sep 12Z · valid Sat 05 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

 - Extended outlook and hazard-feed states are reported in the source stamp.
 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 7 SIGMET records, 29 G-AIRMET records, 7 CWA records. Regional current observations (not corridor forecasts): Atlantic South: IFR/LIFR at KSSI; Atlantic South: MVFR at KHXD, KSGJ; Gulf East: IFR/LIFR at KECP; Gulf West: MVFR at KBFM.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 051056Z 23004. AWC METAR state OK for 30/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=7, G-AIRMET=29, CWA=7; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=25, RATE_LIMITED=5; normalized records=644; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Sep 5, 06:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Sep 6, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL IFR (2/3 d), KBED MVFR (2/3 d), KBFM MVFR (2/3 d), KCRE IFR (2/3 d), KCRG MVFR (2/3 d), KDAB MVFR (2/3 d), KECP VFR (2/3 d), KFIN MVFR (2/3 d), KGKT VFR (2/3 d), KGPT MVFR (2/3 d), KHPN VFR (2/3 d), KHSB MVFR (2/3 d); 17 further airports in section 2.
- NOTAMs: 24 of 29 destinations report an active NOTAM; 5 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 43 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 43 of 43 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- CWA 102 — IFR over ZHU (Houston): contains KHSA, KGPT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBFM 16 NM, KNEW 16 NM, KJKA 36 NM, KPNS 61 NM. valid 2026-09-05 11:56Z to 2026-09-05 12:50Z.
- CWA 102 — IFR over ZJX (Jacksonville): contains KSGJ, KJZI, KCRG, KHXD, KSSI, KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KMYR 2 NM, KECP 6 NM, KCRE 8 NM, KPNS 10 NM, KBFM 16 NM, KFIN 20 NM, KJKA 25 NM, KDAB 39 NM, KLZU 65 NM, KGPT 70 NM, KHSA 89 NM. valid 2026-09-05 11:09Z to 2026-09-05 13:09Z.
- CWA 102 — IFR over ZTL (Atlanta): contains KTRI, KGKT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 18 NM, KLZU 27 NM, KROA 54 NM. valid 2026-09-05 12:00Z to 2026-09-05 14:00Z.
- G-AIRMET SIERRA — IFR: contains KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSSI 2 NM, KHXD 8 NM, KPNS 9 NM, KCRG 10 NM, KECP 12 NM, KSGJ 21 NM, KJKA 25 NM, KJZI 26 NM, KBFM 29 NM, KMYR 30 NM, KFIN 32 NM, KCRE 40 NM, KLZU 41 NM, KDAB 44 NM, KGPT 83 NM, KTPF 89 NM, KSPG 98 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — IFR: contains KGKT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 8 NM, KTRI 11 NM, KLZU 43 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KROA, KSHD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 73 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- SIGMET 63C — CONVECTIVE: contains KNEW (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHSA 9 NM, KGPT 11 NM, KBFM 28 NM, KJKA 36 NM, KPNS 63 NM. valid 2026-09-05 11:55Z to 2026-09-05 13:55Z.
- SIGMET 46E — CONVECTIVE: contains KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KDAB 22 NM, KFIN 27 NM, KSGJ 32 NM, KSSI 32 NM, KCRG 39 NM, KSAV 75 NM, KHXD 75 NM, KJZI 97 NM. valid 2026-09-05 11:55Z to 2026-09-05 13:55Z.
- CWA 202 — IFR over ZTL (Atlanta): boundary within 100 NM of KLZU 31 NM, KAVL 95 NM. valid 2026-09-05 12:00Z to 2026-09-05 14:00Z.
- CWA 303 — TS over ZHU (Houston): boundary within 100 NM of KNEW 99 NM. valid 2026-09-05 12:33Z to 2026-09-05 13:10Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KHSA 0 NM, KAVL 3 NM, KPNS 6 NM, KNEW 17 NM, KGPT 19 NM, KDAB 32 NM, KJKA 33 NM, KFIN 41 NM, KLZU 45 NM, KGKT 46 NM, KBFM 49 NM, KTRI 62 NM, KCRE 62 NM, KSGJ 63 NM, KECP 63 NM, KOPF 74 NM, KMYR 75 NM, KCRG 85 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-05 08:45Z to 2026-09-05 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 12 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-05 08:45Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 92 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KSHD 8 NM, KROA 17 NM, KTRI 91 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBFM 5 NM, KGPT 6 NM, KHSA 15 NM, KNEW 22 NM, KJKA 32 NM, KPNS 49 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 49 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 45 NM, KHPN 71 NM. valid 2026-09-05 10:26Z to 2026-09-05 15:00Z.
- G-AIRMET TANGO — TURB-HI: boundary within 100 NM of KSHD 51 NM, KHPN 78 NM. valid 2026-09-05 10:40Z to 2026-09-05 15:00Z.
- SIGMET 47E — CONVECTIVE: boundary within 100 NM of KROA 7 NM, KTRI 21 NM, KSHD 26 NM, KGKT 58 NM, KAVL 83 NM. valid 2026-09-05 11:55Z to 2026-09-05 13:55Z.
- SIGMET 48E — CONVECTIVE: boundary within 100 NM of KOPF 90 NM. valid 2026-09-05 11:55Z to 2026-09-05 13:55Z.
- SIGMET 49E — CONVECTIVE: boundary within 100 NM of KHXD 10 NM, KJZI 23 NM, KSAV 24 NM, KSSI 30 NM, KCRG 50 NM, KMYR 57 NM, KCRE 60 NM, KSGJ 64 NM, KFIN 90 NM. valid 2026-09-05 11:55Z to 2026-09-05 13:55Z.
- 22 of 43 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 7, G-AIRMET 29, CWA 7; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-05T12:44:19.248689+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 6 of 23 current NOTAMs are new by that baseline — A0332/26 (OTHER, last_updated_at 2026-09-02T18:09:00+00:00); A0333/26 (OTHER, last_updated_at 2026-09-03T09:34:00+00:00); 09/006 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0335/26 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0336/26 (OTHER, last_updated_at 2026-09-03T15:59:00+00:00); 09/008 (OBSTRUCTION, last_updated_at 2026-09-04T03:35:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
