- GFA
- NOTAM

METAR – issued hourly. The highest visibility, wind, and temperature are reported. Issued by the National Weather Service (NWS) by aviation forecasters. Not a forecast. KLZU observations are described by the NWS hour-by-hour forecast. The NWS day/night forecast is coarser than the hour-by-hour forecast. The GFS model range is 12 hours. The GFS model is a long-range forecast. The GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

SHORT TERM

..
(This afternoon through Sunday)
Issued at 223 PM EDT Sat Sep 19 2026

Temperatures are on the rise this afternoon across north and central Georgia despite some lingering morning cloud cover. Temperatures in the mid to upper 80s should top out by the late afternoon and early evening in the low to mid 90s. The humidity is still around as well, which means heat index values into the lower triple digits can be expected into the evening. Beyond the heat and humidity, expected isolated to scattered (20-40% chances) afternoon and evening thunderstorms across both north and central Georgia. A bit more confidence in actually seeing storms today - 12Z sounding comparison shows the full profile has a bit more moisture in it compared to yesterday, so updrafts may experience less dry air entrainment issues. Forecast SBCAPE values are in the 2000-3000 J/kg range. Shear remains very light as we sit between the fading ridge to the west and the cut-off low moving over the Florida peninsula. Still, a severe threat remains thanks to DCAPE values that are forecast to be near 1000 J/kg. Rain laden air parcels from stronger storms crashing downward may provide for some isolated damaging wind gusts into the evening. SPC maintains a level 1 out of 5 (Marginal) risk for portions of the area.

The upper level low to the south continues to slowly slide to the west into the Gulf tomorrow. The CWA remains caught between various mid to upper level features, but some mid to upper level ridging may build in aloft tomorrow showing as an elevated warm nose on model soundings. This may act to limit convection when compared to today, and, outside the mountains, chances of seeing a thunderstorm tomorrow are lower (10-20% in most areas). A similar risk of a severe wind gust will exist over northern Georgia. Afternoon highs will be in the lower 90s. Humidity remains elevated with moist surface airmass in place, so heat indices will once again approach the triple digits.

LONG TERM

..
(Monday morning through next Friday)
Issued at 223 PM EDT Sat Sep 19 2026

The large-scale mid-/upper-level pattern will be characterized by a ridge to the west over the Plains, placing Georgia within northwest flow starting on Tuesday. This pattern can support mesoscale convective systems (MCSs) along the northern periphery of the ridge that dive southward across the Ohio/Tennessee River Valleys. If and where MCSs will develop and track (as well as where resulting outflow boundaries stall and spark convection the following day) generally have very low predictability more than 24 hours out, so PoPs and severe weather potential on Monday, Tuesday, and Wednesday will bear watching. FWIW, the AI-NWP-based forecasts and GEFS machine learning forecasts from NCAR suggest that Marginal Risks (level 1 out of 5) may be needed on Monday and possibly Tuesday, which would not be surprising given the synoptic setup.

Ensemble guidance signals a cold air damming ("wedge") setup across north and central Georgia Wednesday night through Friday night. This

is reflected in our forecasted high temperatures (70s to 80s) and low temperatures (mid-50s to mid-60s). While still seasonable temperatures for this time of year, it will be noticeably cooler than conditions this weekend. Additionally, moisture will decrease during this time, as the drier wedge airmass and northerly low-/mid-level winds prevail. Still, enough moisture will remain to support a slight chance for showers on Thursday and Friday, although the vast majority of the forecast area looks to stay dry. It may not be true autumnal weather, but given that the first day of astronomical fall is Tuesday, I will take it a slight cooldown!

Area Forecast Discussion
National Weather Service Peachtree City GA
747 PM EDT Sat Sep 19 2026

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- Unseasonably warm conditions will continue into the beginning of the work week. Heat index values will peak in the upper 90s to mid 100s Today and Sunday.

- Marginal Risk (level 1 of 5) for severe weather is in effect this evening. Primary threat will be a few damaging wind gusts.

- Rain chances will peak on Monday, Tuesday, and Wednesday. The potential for severe weather will need to be monitored.

- More seasonable temperatures are expected starting midweek.

&&

.SHORT TERM...

Issued at 223 PM EDT Sat Sep 19 2026

Temperatures are on the rise this afternoon across north and central Georgia despite some lingering morning cloud cover. Temperatures in the mid to upper 80s should top out by the late afternoon and early evening in the low to mid 90s. The humidity is still around as well, which means heat index values into the lower triple digits can be expected into the evening. Beyond the heat and humidity, expected isolated to scattered (20-40% chances) afternoon and evening thunderstorms across both north and central Georgia. A bit more confidence in actually seeing storms today - 12Z sounding comparison shows the full profile has a bit more moisture in it compared to yesterday, so updrafts may experience less dry air entrainment

issues. Forecast SBCAPE values are in the 2000-3000 J/kg range. Shear remains very light as we sit between the fading ridge to the west and the cut-off low moving over the Florida peninsula. Still, a severe threat remains thanks to DCAPE values that are forecast to be near 1000 J/kg. Rain laden air parcels from stronger storms crashing downward may provide for some isolated damaging wind gusts into the evening. SPC maintains a level 1 out of 5 (Marginal) risk for portions of the area.

The upper level low to the south continues to slowly slide to the west into the Gulf tomorrow. The CWA remains caught between various mid to upper level features, but some mid to upper level ridging may build in aloft tomorrow showing as an elevated warm nose on model soundings. This may act to limit convection when compared to today, and, outside the mountains, chances of seeing a thunderstorm tomorrow are lower (10-20% in most areas). A similar risk of a severe wind gust will exist over northern Georgia. Afternoon highs will be in the lower 90s. Humidity remains elevated with moist surface airmass in place, so heat indices will once again approach the triple digits.

&&

.LONG TERM...
(Monday morning through next Friday)
Issued at 223 PM EDT Sat Sep 19 2026

The large-scale mid-/upper-level pattern will be characterized by a ridge to the west over the Plains, placing Georgia within northwest flow starting on Tuesday. This pattern can support mesoscale convective systems (MCSs) along the northern periphery of the ridge that dive southward across the Ohio/Tennessee River Valleys. If and where MCSs will develop and track (as well as where resulting outflow boundaries stall and spark convection the following day) generally have very low predictability more than 24 hours out, so PoPs and severe weather potential on Monday, Tuesday, and Wednesday will bear watching. FWIW, the AI-NWP-based forecasts and GEFS machine learning forecasts from NCAR suggest that Marginal Risks (level 1 out of 5) may be needed on Monday and possibly Tuesday, which would not be surprising given the synoptic setup.

Ensemble guidance signals a cold air damming ("wedge") setup across north and central Georgia Wednesday night through Friday night. This is reflected in our forecasted high temperatures (70s to 80s) and low temperatures (mid-50s to mid-60s). While still seasonable temperatures for this time of year, it will be noticeably cooler than conditions this

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:35 ET; retrieved Sep 20 02:18 ET; 103 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 330 degrees true, 337 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KSSI METAR 200435Z.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:53 ET; retrieved Sep 20 02:18 ET; 85 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 020 degrees true, 029 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRE METAR 200453Z.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:54 ET; retrieved Sep 20 02:18 ET; 84 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 110 degrees true, 119 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KROA METAR 200454Z.

METAR

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KROA observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. No usable GFS MOS guidance for the planned dates at this airport (state: stale). The product reaches about 72 hours.

Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- Mon, Sep 21 • 12:00–18:00 ET: No IAF group carried both a ceiling and a visibility for 12:00–18:00 ET ET

- **Mon, Sep 21 · 18:00–00:00 ET:** No TAF group carried both a ceiling and a visibility for 18:00–00:00 ET ET

- + MOS target-window outlook (GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-20=MEX, 2026-09-21=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:35 ET; retrieved Sep 20 02:18 ET; 103 min before this run.
- Measured values read from the KSHD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 180 degrees true, 190 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KSHD METAR 200435Z.

SUN 20 SEP 00:53 ET OBSERVED

Current observation

METAR

few 2,200 ft, few 12,000 ft

WINDNW (330°) 5 kt

TEMPERATURE24 °C

VISIBILITY10 sm

DEWPOINT23 °C

From 332°M - 5 kt

Wind from 332 degrees true, 332 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 200453Z.

Wind favours RWY 35

330° true · 332° magnetic · 5 kt · NOTAM-affected: 08 and 26

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:53 ET; retrieved Sep 20 02:18 ET; 85 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 330 degrees true, 332 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 200453Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MVA) — Model Output Statistics

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. No usable GFS MOS guidance for the planned dates at this airport (state: stale). The product reaches about 72 hours.

FAA NOTAM (NIMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:53 ET; retrieved Sep 20 02:18 ET; 85 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 140 degrees true, 146 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 200453Z.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:53 ET; retrieved Sep 20 02:18 ET; 85 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 050 degrees true, 056 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSRQ METAR 200453Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

TAXIWAY

080076 — APPROX. AIRCRAFT RAMP NORTH ACCESS CLOSED

Effective 2026-08-25T11:00:00Z → 2026-10-30T22:00:00Z

16 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSRQ this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Time and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:35 ET; retrieved Sep 20 02:18 ET; 103 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 080 degrees true, 086 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 200435Z.

Evidence & limitations

- METAR source state: ok; observed Sep 20 00:53 ET; retrieved Sep 20 02:18 ET; 85 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 170 degrees true, 171 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 18R and 18L. Wind source: KNEW METAR 200453Z.

Evidence & limitations

• METAR source state: ok; observed Sep 20 00:56 ET; retrieved Sep 20 02:18 ET; 82 min before this run.

• Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.15 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 130 degrees true, 143 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KHPN METAR 200456Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. No usable GFS MOS guidance for the planned dates at this airport (state: stale). The product reaches about 72 hours.

FAA NOTAM (NIMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 18 SIGMET records, 23 G-AIRMET records. Regional current observations (not corridor forecasts): Atlantic North: category unavailable at KMYR; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 200456Z AUTO . AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=18, G-AIRMET=23, CWA=0; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=616; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Sep 18 – Mon Sep 21, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 1 of 2 active trip days; 1 reaches no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 1 of 2 active trip days carry a forecast flight category and 1 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category.
- KLZU current observation: VFR — conditions now, not a trip day. KLZU: 0 of 10 current NOTAMs are new by the stated 72-hour publication window.
- 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 41 hazard areas retained a coordinate ring this run, 41 of them valid inside the trip window, by the geometric test named below.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 18 – Mon Sep 21, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 1 of 2 active trip days in Fri Sep 18 – Mon Sep 21, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sun Sep 20, 06:00–22:00 ET: IFR — most restrictive forecast flight category; high confidence; from TAF.
- Mon Sep 21, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 1 of 2 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL IFR (2/2 d), KBED IFR (2/2 d), KBFM VFR (2/2 d), KCRE MVFR (2/2 d), KCRG MVFR (2/2 d), KDAB VFR (2/2 d), KECP MVFR (2/2 d), KFIN VFR (2/2 d), KGKT VFR (2/2 d), KGPT MVFR (2/2 d), KHPN IFR (2/2 d), KHSa MVFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 41 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.

- 41 of 41 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET ZULU — ICE: contains KHPN (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBED 70 NM. valid 2026-09-20 03:23Z to 2026-09-20 09:00Z.
- G-AIRMET SIERRA — IFR: contains KGKT, KAVL, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KROA 24 NM, KLZU 53 NM, KSHD 94 NM. valid 2026-09-20 06:15Z to 2026-09-20 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KGKT, KSHD, KROA, KTRI, KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 48 NM, KLZU 57 NM. valid 2026-09-20 06:15Z to 2026-09-20 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KGPT 1 NM, KNEW 40 NM, KBFM 47 NM, KJKA 73 NM, KPNS 93 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-20 03:23Z to 2026-09-20 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 13 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-20 03:23Z to 2026-09-20 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 44 NM. valid 2026-09-20 06:15Z to 2026-09-20 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KHPN 65 NM, KSHD 93 NM. valid 2026-09-20 06:15Z to 2026-09-20 09:00Z.
- G-AIRMET TANGO — LLWS: boundary within 100 NM of KHPN 88 NM, KSHD 98 NM. valid 2026-09-20 02:45Z to 2026-09-20 09:00Z.
- SIGMET 34E — CONVECTIVE: boundary within 100 NM of KOPF 55 NM. valid 2026-09-20 05:55Z to 2026-09-20 07:55Z.
- SIGMET 35E — CONVECTIVE: boundary within 100 NM of KCRE 30 NM, KMYR 34 NM, KJZI 95 NM. valid 2026-09-20 05:55Z to 2026-09-20 07:55Z.
- SIGMET 36E — CONVECTIVE: boundary within 100 NM of KECP 28 NM, KSSI 79 NM, KSAV 87 NM, KCRG 89 NM. valid 2026-09-20 05:55Z to 2026-09-20 07:55Z.
- SIGMET 38E — CONVECTIVE: boundary within 100 NM of KOPF 7 NM, KDAB 44 NM, KFIN 61 NM, KSGJ 89 NM. valid 2026-09-20 05:55Z to 2026-09-20 07:55Z.
- SIGMET 39E — CONVECTIVE: boundary within 100 NM of KAVL 23 NM, KLZU 58 NM, KGKT 69 NM, KTRI 80 NM, KJZI 94 NM. valid 2026-09-20 05:55Z to 2026-09-20 07:55Z.
- SIGMET 40E — CONVECTIVE: boundary within 100 NM of KJZI 51 NM, KSSI 56 NM, KCRG 60 NM, KHXD 63 NM, KSGJ 65 NM, KSAV 81 NM, KFIN 85 NM, KMYR 91 NM, KDAB 95 NM. valid 2026-09-20 05:55Z to 2026-09-20 07:55Z.
- 27 of 41 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 18, G-AIRMET 23, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 · New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-20T06:18:51.438811+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 10 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- No service-status wording was found in the published text of the 10 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
