Evidence & limitations

- METAR source state: ok; observed Oct 16 22:56 ET; retrieved Oct 17 00:30 ET; 94 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- Raw METAR: `METAR KLZU 170256Z AUTO 29010G20KT 10SM BKN041 16/12 A3004 RMK AO2 SLP174 60000 T01610122 52031 $`
- KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 290 degrees true, 296 degrees magnetic,

at 10 knots gusting 20 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 25. Wind source: KLZU METAR 170256Z.

⚠ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

SHORT TERM

..
(This afternoon through Saturday)
Issued at 245 PM EDT Fri Oct 16 2026

A broad, strong cold front situated along the leading edge of a digging mid-level trough is progged to sweep across the state this afternoon through tomorrow morning. At the time of writing of this AFD, temperatures in northwest Georgia are in the low-to-mid 80s, and 3 counties to the northwest -- just across the GA/TN border in Bedford County, TN -- temperatures are in the upper 50s (!). Patchy light showers and drizzle have developed within the cloud shield on the backside of the front, and low-end (15-25%) chances for an isolated shower will filter across portions of north Georgia this afternoon. Most will remain dry. A stout surface pressure gradient will develop in response to the enhanced forcing, supporting the development of breezy conditions areawide. Widespread gusts up to 25 to 30 mph are possible, with a Wind Advisory in effect for portions of north and northeast Georgia to highlight increased chances for gusts up to 35 to 40 mph from late this afternoon through early Saturday afternoon. An important consideration as winds tick upward: for areas that experienced increased tree damage from the glancing blow from Isaias last week, any partially-downed trees or loosened limbs will be more easily dislodged at lower-than-normal wind speeds. Be mindful, and be sure to secure any loose outdoor furniture or holiday decorations.

PWATs will plummet post-front (<0.5", sub-25th percentile climatologically), with clear and dry and markedly cooler conditions expected on Saturday. Morning lows will be crisp if not chilly for some, in the 40s to 50s. Highs will struggle to get out of the 50s for portions of northeast Georgia, staying solidly in the 60s to near 70 elsewhere.

LONG TERM

..
(Sunday morning through next Thursday)
Issued at 245 PM EDT Fri Oct 16 2026

Crisp Start to Sunday:

A dry and relatively cool airmass will remain across the area on Sunday, courtesy of stout N/NE flow on the backside of a stacked low over the Carolina coast. Low temperatures Sunday morning will be the coolest so far this season, with widespread low to mid 40s. One exception will be across the North GA mountains, which could fall to the mid 30s or even near freezing in the coldest spots. Temperatures will slowly increase throughout the day under sunny skies, but will struggle to climb out of the mid to upper 60s. Between the cooler temperatures and slightly breezy northeast winds (10mph gusting to 20mph), the feeling of Fall will be in full effect.

Dry with Gradual Warming Next Week:

Guidance remains in relatively good agreement on the forecast for much of next week, with a closed mid-level low parked over the Carolinas. North and Central GA will remain on the dry side of this system, with rain chances near zero. Temperatures will slowly warm

each day, but remain right around normal, with highs generally in the low to mid 70s, and overnight lows in the upper 40s to low 50s.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 5 kt · 35°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 10 kt · 57°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 200 degrees true, 207 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 19. NOTAM-affected runway ends, hatched separately from the wind highlight: 10 and 28. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSAV METAR 170253Z.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 2% · TS12 0% · wind 8 kt · 45°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 11 kt · 59°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 8% · TS12 0% · wind 12 kt · 52°F; 20:00 ET sky clear · PoP12 3% · TS12 1% · wind 12 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 1% · wind 10 kt · 48°F; 20:00 ET sky clear · PoP12 0% · TS12 1% · wind 10 kt · 60°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 220 degrees true, 229 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 18 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 170253Z.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- **Sun, Oct 18 · 18:00–00:00 ET**: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 2% · wind 12 kt · 50°F; 20:00 ET sky clear · PoP12 2% · TS12 1% · wind 15 kt · 60°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.90 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 230 degrees true, 239 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. - **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 2% · wind 10 kt · 51°F; 20:00 ET sky clear · PoP12 4% · TS12 1% · wind 13 kt · 59°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KTRI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 340 degrees true, 348 degrees magnetic, at 10 knots gusting 17 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 1 kt · 32°F; 20:00 ET sky clear · PoP12 3% · TS12 0% · wind 5 kt · 55°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:54 ET; retrieved Oct 17 00:30 ET; 96 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 300 degrees true, 309 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 7 kt · 39°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 9 kt · 58°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:56 ET; retrieved Oct 17 00:30 ET; 94 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 210 degrees true, 217 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 20. Wind source: KSGJ METAR 170256Z.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 12% · TS12 1% · wind 17 kt · 62°F; 20:00 ET sky clear · PoP12 8% · TS12 2% · wind 15 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 12%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 200 degrees true, 207 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 8% · TS12 1% · wind 11 kt · 56°F; 20:00 ET sky clear · PoP12 5% · TS12 2% · wind 12 kt · 60°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:35 ET; retrieved Oct 17 00:30 ET; 115 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 200 degrees true, 207 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KFIN METAR 170235Z.

PREDICTED · NOT A FLIGHT CATEGORY

WIND 14 kt

TEMPERATURE 63–65 °F

PRECIP CHANCE 14%

DEWPOINT 57 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 14% · wind 14 kt · 63°F; 20:00 ET sky partly cloudy · PoP12 10% · wind 14 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:36 ET; retrieved Oct 17 00:30 ET; 114 min before this run.

- Measured values read from the KGKT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.14 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 310 degrees true, 317 degrees magnetic, at 10 knots gusting 16 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 28. PREDICTED · NOT A FLIGHT CATEGORY

WIND 0–4 kt

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · wind 0 kt · 37°F; 20:00 ET sky clear · PoP12 4% · wind 4 kt · 55°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 3 kt · 33°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 8 kt · 51°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 2% · TS12 1% · wind 6 kt · 47°F; 20:00 ET sky clear · PoP12 1% · TS12 0% · wind 10 kt · 60°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 16 22:34 ET; retrieved Oct 17 00:30 ET; 116 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 330 degrees true, 332 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 170234Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 7 kt · 51°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 9 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 200 degrees true, 207 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 25R and 25L. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 16% · TS12 2% · wind 18 kt · 66°F; 20:00 ET sky partly cloudy · PoP12 12% · TS12 3% · wind 16 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 16%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 5 kt · 47°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 9 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 9 kt · 51°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 9 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 340 degrees true, 341 degrees magnetic, at 17 knots gusting 30 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 0% · wind 6 kt · 50°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 12 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 090 degrees true, 096 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 3% · wind 20 kt · 69°F; 20:00 ET sky clear · PoP12 0% · TS12 1% · wind 18 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 3%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 1% · TS12 2% · wind 15 kt · 62°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 13 kt · 73°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 4% · wind 13 kt · 66°F; 20:00 ET sky clear · PoP12 0% · TS12 2% · wind 13 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 4%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 4% · wind 14 kt · 65°F; 20:00 ET sky clear · PoP12 1% · TS12 1% · wind 15 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 4%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:53 ET; retrieved Oct 17 00:30 ET; 97 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.18 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 010 degrees true, 011 degrees magnetic, at 20 knots gusting 33 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 36L and 36R. METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 0% · TS12 0% · wind 13 kt · 61°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 13 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 0%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: partial; selected by target date: 2026-10-17=GFS, 2026-10-18=GFS, 2026-10-19=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:33 ET; retrieved Oct 17 00:30 ET; 117 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 030 degrees true, 037 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 09L and 09R. NOTAM-affected runway ends, hatched separately from the wind highlight: 09L and 27R. The wind-favoured end 09L is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KOPF METAR 170233Z.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

- **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 29% · TS12 31% · wind 13 kt · 74°F; 20:00 ET sky ovc · PoP12 16% · TS12 12% · wind 16 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:56 ET; retrieved Oct 17 00:30 ET; 94 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.77 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 300 degrees true, 313 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 170256Z.

- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 0% · wind 15 kt · 44°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 0% · wind 17 kt · 51°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 16 22:51 ET; retrieved Oct 17 00:30 ET; 99 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.67 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 270 degrees true, 284 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The wind-favoured end 29 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 170251Z.

- **Mon, Oct 19 · Whole-day rough outlook**: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 0% · wind 6 kt · 37°F; 20:00 ET sky ovc · PoP12 11% · TS12 0% · wind 11 kt · 50°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 0%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 4 SIGMET records, 38 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf East: IFR/LIFR at KPNS; Gulf West: MVFR at KBFM; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 16 – Mon Oct 19, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Oct 16 – Mon Oct 19, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Oct 17, 06:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Oct 18, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- Mon Oct 19, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL MVFR (2/3 d), KBED MVFR (2/3 d), KBFM MVFR (2/3 d), KCRE MVFR (2/3 d), KCRG VFR (2/3 d), KDAB VFR (2/3 d), KECP MVFR (2/3 d), KFIN VFR (2/3 d), KGKT VFR (2/3 d), KGPT VFR (2/3 d), KHPN VFR (2/3 d), KHSA VFR (2/3 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 43 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 43 of 43 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET ZULU — ICE: contains KSHD, KROA, KGKT, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 6 NM, KLZU 66 NM. valid 2026-10-17 03:00Z to 2026-10-17 09:00Z.

- 24 of 43 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 4, G-AIRMET 38, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 · New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-17T04:30:18.192194+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 5 of 13 current NOTAMs are new by that baseline — A0394/26 (RUNWAY, last_updated_at 2026-10-14T11:23:00+00:00); 10/023 (OBSTRUCTION, last_updated_at 2026-10-15T11:34:00+00:00); A0395/26 (OTHER, last_updated_at 2026-10-15T16:48:00+00:00); A0397/26 (RUNWAY, last_updated_at 2026-10-15T20:17:00+00:00); A0399/26 (RUNWAY, last_updated_at 2026-10-15T22:02:00+00:00).
- No service-status wording was found in the published text of the 13 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
