METAR — the routine hourly observation issued hourly by the observing office. It includes SPECI reports off-peak. It includes visibility, wind, temperature, dewpoint, and cloud. Issued by the observing office, it is not a forecast, and it describes conditions right now, not this trip day.

NWS hourly gridpoint forecast — the Weather Service digital forecast for the cell containing KLZU, updated through the day and reaching about 156 hours. It includes by-hour sky, wind and precipitation and it is the spine of the change view on this board. The NWS hourly gridpoint forecast reaches this day.

GFS extended range model output — the Coarse Resolution (CRES) model, a long-range forecast, is shown in the short-range outlook. It is published every 12 hours and flight category is shown in the dropdown with its value.

GFA and GFAA — Forecast Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

SHORT TERM

..
(This afternoon through Wednesday)
Issued at 150 PM EDT Tue Sep 1 2026

Partly cloudy skies with high pressure centered just north of the state keeping things dry across the area. There is a decent amount of mid level moisture across the region (as evident by the cloud field) but this high pressure ridge will keep things mostly dry through the short term. We could see an isolated shower/thunderstorm or two this afternoon and again Wed afternoon mainly across central GA being furthest away from the ridge center. No severe storms expected. Day time highs will continue mainly in the lower to middle 90s with lows in the lower 70s to upper 60s.

LONG TERM

..
(Thursday morning through next Monday)
Issued at 150 PM EDT Tue Sep 1 2026

The extended period begins where the short term leaves off with a fairly dominate 596dm 500mb mid level ridge centered over the TN Valley. As a result, afternoon highs will continue reach up into the mid 90s most locations ...except mountains. Heat index values will flirt with Heat Advisory for central and eastern GA Thu, Fri and especially Saturday.

All of the medium range guidance is in good agreement that reinforcing and much stronger northern stream trough will dig southeast through the mid Atlantic and begin to break down the eastern periphery of the ridge by Saturday. This will drive a

backdoor front through the region late Saturday into Sunday. POPs do increase for the weekend both as a result of less of a suppressive ridge and because of the enhancement along the approaching frontal boundary...which could take the form of a convective complex Saturday afternoon/evening. About the only noticeable sensible change will be a change in wind direction to the N or NE by Sunday and increased afternoon/evening thunderstorm activity with the center of the ridge pushed back to the west of TX and a broad NW flow in place across the SE through the remainder of the extended. Afternoon highs could come down somewhat by Monday as more afternoon activity is expected. NBM guidance reflects that with highs only touching 90 on Labor Day and widespread 20-40 pops.

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 41% · wind 4 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 27% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

METAR — the routine surface observation issued hourly by the reporting station, with

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and research reports – the Graded

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 40% · TS12 34% · wind 3 kt · 70°F; 20:00 ET sky partly cloudy · PoP12 12% · TS12 22% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 34%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. + Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 21% · TS12 24% · wind 4 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 23% · TS12 26% · wind 11 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 24%, 12 h precipitation probability 21%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. - **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 10% · wind 6 kt · 66°F; 20:00 ET sky clear · PoP12 2% · TS12 3% · wind 7 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 10%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

GFA and low-level winds, the Gradient

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

MOS (MEX)

- + Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · wind 2 kt · 71°F; 20:00 ET sky partly cloudy · PoP12 13% · wind 4 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and low-level winds, the Gradient

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 26% · TS12 27% · wind 3 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 28% · TS12 27% · wind 11 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 27%, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 31%, 12 h precipitation probability 21%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. + Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 21% · wind 8 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 15% · TS12 6% · wind 10 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 21%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 20%, 12 h precipitation probability 6%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Land runways drawn: 04/22, 16/34. Wind from 080 degrees true, 087 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. + Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 18% · TS12 28% · wind 8 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 8% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 28%, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. METAR — the routine surface observation issued hourly by the reporting station, with

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and research reports – the Graded

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 15% · wind 5 kt · 80°F; 20:00 ET sky clear · PoP12 9% · TS12 5% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 15%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. WIND VS RUNWAYS

KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KHXD METAR 020255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and low-level winds, the Gradient

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 18% · wind 5 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 6% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 18%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 040 degrees true, 047 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KSGJ METAR 020256Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 31% · TS12 40% · wind 9 kt · 78°F; 20:00 ET sky ovc · PoP12 52% · TS12 12% · wind 10 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 020 degrees true, 027 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KFIN METAR 020255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 35% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 61% · wind 8 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WPC surface prog raster chart for F+144 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

18:00–00:00 ET ET

UNAVAILABLE — this period falls 145 h after the Wed 02 Sep 00Z cycle, past the 144 h (6 day) end of the published WPC surface prog series. The product does not reach this far, so no chart is guessed and nothing is implied about the weather.

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 170 degrees true, 179 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KMYR METAR 020253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 14% · wind 9 kt · 78°F; 20:00 ET sky clear · PoP12 5% · TS12 8% · wind 13 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 14%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 17%, 12 h precipitation probability 10%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 190 degrees true, 199 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 020253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 14% · wind 13 kt · 78°F; 20:00 ET sky clear · PoP12 5% · TS12 8% · wind 16 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 14%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 17%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

METAR — the routine surface observation issued hourly by the reporting station, with

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and research reports – the Graded

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

GFS
EXTENDED MOS (MEX)

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 37% · wind 6 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 42% · TS12 12% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

GFS extended MOS (MEX) — the extended-

GFA and low-level winds, the Gradient

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 36% · TS12 46% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 59% · TS12 22% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 46%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 180 degrees true, 182 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. Wind source: KPNS METAR 020253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 35% · TS12 42% · wind 6 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 60% · TS12 21% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 19% · TS12 45% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 31% · TS12 26% · wind 8 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 45%, 12 h precipitation probability 19%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 48%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 52% · wind 4 kt · 77°F; 20:00 ET sky ovc · PoP12 62% · TS12 23% · wind 7 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · TS12 57% · wind 3 kt · 76°F; 20:00 ET sky ovc · PoP12 43% · TS12 26% · wind 7 kt · 80°F. + Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 66% · wind 8 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 38% · TS12 24% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 66%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Land runways drawn: 04/22, 18/36. Wind from 050 degrees true, 056 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. MOS (MEX)

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 36% · TS12 75% · wind 5 kt · 80°F; 20:00 ET sky ovc · PoP12 44% · TS12 29% · wind 5 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 75%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 55%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 030 degrees true, 036 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 020255Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 18% · TS12 68% · wind 4 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 19% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 68%, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 17% · TS12 53% · wind 5 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 33% · TS12 16% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 53%, 12 h precipitation probability 17%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 35% · TS12 39% · wind 3 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 57% · TS12 25% · wind 5 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · TS12 41% · wind 4 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 61% · TS12 23% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

METAR — the routine surface observation issued hourly by the reporting station, with

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and low-level clouds, the Clouds and

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 38% · TS12 46% · wind 4 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 45% · TS12 23% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 38%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 51%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · wind 3 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 43% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 140 degrees true, 141 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 18R and 18L. Wind source: KNEW METAR 020253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 46% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 39% · TS12 18% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 45%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 320 degrees true, 327 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 30. Wind source: KOPF METAR 020253Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 64% · wind 8 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 46% · TS12 34% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 64%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 090 degrees true, 103 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. GFSEXTENDED MOS (MEX)

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 28% · wind 5 kt · 72°F; 20:00 ET sky partly cloudy · PoP12 1% · TS12 19% · wind 10 kt · 73°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 28%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 2%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ METAR

METAR — the routine surface observation issued hourly by the reporting station, with

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and low-level clouds, the Clouds and

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: AUTH_ERROR), so the NOTAM list is unknown rather than empty.

GFSEXTENDED MOS (MEX)

+ Outlook sources and technical detail

- **Fri, Sep 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 8% · TS12 14% · wind 3 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 4% · TS12 1% · wind 7 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 14%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sat, Sep 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 5% · TS12 1% · wind 8 kt · 65°F; 20:00 ET sky partly cloudy · PoP12 15% · TS12 1% · wind 11 kt · 66°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 1%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 29% · TS12 7% · wind 9 kt · 59°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 17% · wind 14 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 7%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 14% · TS12 5% · wind 6 kt · 58°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 2% · wind 8 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 5%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 9 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Gulf East: category unavailable at KSPG; Gulf West: category unavailable at KHSA; Long-range: IFR/LIFR at KHPN; Long-range: category unavailable at KOPF.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip-window feasibility evidence (Derived): 0 of 4 active trip days carry a forecast flight category and 4 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Sep 4 – Mon Sep 7, 2026. "This weekend" is taken to mean exactly this window; no other date range is assessed.
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time. 0 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking.
- KLZU current observation: VFR — conditions now, not a trip day. KLZU NOTAM query state is AUTH_ERROR, so no new-NOTAM count is stated; an incomplete query is not the same as none.
- 35 hazard areas retained a coordinate ring this run, 0 of them valid inside the trip window, by the geometric test named below.

Full evidence, unchanged: the five parts in the owner's order

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): not assessable from forecast categories — 0 of 4 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 4 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 4, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sat Sep 5, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sun Sep 6, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 0 of 29 covered airports resolve a forecast flight category on at least one active trip day; 29 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- No covered airport resolves a forecast flight category on an active trip day in this run, so no per-airport category is listed. That is the honest answer at this lead time, not a statement that the airports are unusable.
- NOTAMs: no destination of 29 reports an active NOTAM this run; 29 destination NOTAM queries did not complete. KLZU departure NOTAM state: AUTH_ERROR.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 35 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 28 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- None of the 35 retained hazard areas is valid inside the planned trip window. SIGMETs, G-AIRMETs and CWAs are short-fuse products, so what follows describes conditions now and in the next few hours — it is not a forecast for the trip, and it must not be read as one.
- G-AIRMET SIERRA — IFR: contains KBED, KHPN (point-in-polygon (ray casting) against the product's own coordinate ring). valid 2026-09-02 03:36Z to 2026-09-02 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KMYR, KHXD, KSAV, KJZI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRE 2 NM, KSSI 47 NM, KLZU 92 NM, KCRG 93 NM. valid 2026-09-02 02:45Z to 2026-09-02 09:00Z.
- SIGMET 11E — CONVECTIVE: contains KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KDAB 2 NM, KFIN 20 NM, KSGJ 50 NM, KCRG 74 NM, KTPF 77 NM, KVNC 84 NM, KSRQ 87 NM. valid 2026-09-02 03:55Z to 2026-09-02 05:55Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KROA 38 NM, KTRI 76 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-02 02:45Z to 2026-09-02 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KSHD 12 NM, KROA 29 NM. valid 2026-09-02 03:36Z to 2026-09-02 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 46 NM, KHPN 48 NM, KSHD 74 NM. valid 2026-09-02 03:36Z to 2026-09-02 09:00Z.
- G-AIRMET TANGO — TURB-HI: boundary within 100 NM of KPNS 4 NM, KBFM 5 NM, KJKA 19 NM, KGPT 28 NM, KNEW 74 NM, KECP 76 NM. valid 2026-09-02 02:45Z to 2026-09-02 09:00Z.
- G-AIRMET TANGO — TURB-HI: boundary within 100 NM of KBED 37 NM. valid 2026-09-02 02:45Z to 2026-09-02 09:00Z.
- SIGMET 9E — CONVECTIVE: boundary within 100 NM of KHPN 8 NM, KSHD 81 NM. valid 2026-09-02 03:55Z to 2026-09-02 05:55Z.
- 26 of 35 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 9, G-AIRMET 26, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-02T04:42:05.655154+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.

• KLZU NOTAM query state is AUTH_ERROR, so this run does not know the KLZU NOTAM picture. No new NOTAM count is stated: an incomplete query is not the same as no NOTAMs.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
