RETURN DAY

CONFIDENCE UNAVAILABLE

OCT 4 · OPERATING DAY ENDED

- METAR
- TAF
- NWS-hr
- NWS-day
- MAV
- MEX
- GFA
- NOTAM

METAR — issued hourly, including SPECI reports for visibility, wind, and other conditions. Issued by the National Weather Service (NWS) and the FAA. KLZU observations are available on this page.

TAF — The National Weather Service (NWS) issues TAFs for the terminal area. TAFs are valid for up to 24 hours. KLZU observations are available on this page.

NWS hour — Weather Service (NWS) hourly forecast. The NWS issues hourly forecasts for the terminal area. KLZU observations are available on this page.

NWS day/night — Weather Service (NWS) day/night forecast. The NWS issues day/night forecasts for the terminal area. KLZU observations are available on this page.

GFS Model — Global Forecasting System (GFS) model. The GFS is a global model that provides weather forecasts for the entire globe. KLZU observations are available on this page.

GFS extended range — Global Forecasting System (GFS) extended range forecast. The GFS is a global model that provides weather forecasts for the entire globe. KLZU observations are available on this page.

GFA and TAF — Global Forecasting System (GFS) and TAF. The GFS is a global model that provides weather forecasts for the entire globe. KLZU observations are available on this page.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

No operational note is available for this date.

SOURCES & LIMITATIONS — HOUR-BY-HOUR SOURCES

No per-hour KLZU forecast periods were retained for this date — source state: ended. Nothing has been withheld or summarised away; there is no hourly evidence to show.

EXTENDED OUTLOOK SUMMARY

.. (This afternoon through Monday)
Issued at 233 PM EDT Sun Oct 4 2026

Precipitation has been slower to start than expected today, though we are finally seeing rain build in across far north Georgia with moisture convergence ahead of the front and across central Georgia as deeper moisture continues to push into the CWA. — .. (Tuesday morning through next Saturday)
Issued...

SHORT TERM

..
(This afternoon through Monday)
Issued at 233 PM EDT Sun Oct 4 2026

Precipitation has been slower to start than expected today, though we are finally seeing rain build in across far north Georgia with moisture convergence ahead of the front and across central Georgia as deeper moisture continues to push into the CWA. PWAT on the morning sounding was very moist at just above 2" with a profile that is nearly moist adiabatic (with a touch of warming aloft) through the column. This is representative of the airmass ahead of the wedge/CAD that has pushed into NE GA and mostly stalled, which is still moist but naturally drier just as a by-product of being cooler. The question to ask may be "what has taken so long for the rain to get going outside a few locations" and the answer seems to be moisture transport. Morning sounding shows pretty much everything sub-700mb to be stagnant. Can't get isentropic lift going if the air isn't really moving. That is finally changing as rain builds in from the south and west with mesoanalysis showing an uptick in 850 mb transport.

So, the rest of the day does look to be the advertised rainy day, though probably not as consistent or steady as previously advertised. As such, the forecast totals have come down, with most areas looking at 1-2" through Monday. This is a bit higher than the ensemble mean across HREF and REFS, but CAMs look to be over-mixed and underdone with the more stratiform precip within the shallow isentropic lift. Also have to wonder if there is a small DA impact given ongoing radar outage along the northeastern Gulf coast. Higher totals will be possible in places which do see more convective activity - for instance, parts of Cobb County saw upwards of 2" this morning before more steady rain moved in. Isolated amounts of 3-5" will be possible, especially across central Georgia where rain may be a bit heavier at times through Monday morning.

Wedge/CAD has likely stalled with surface high over the NE moving off the coast. Low cloud cover will likely lock it in place for the rest of the afternoon and evening with little in the way of meaningful processes to break down the inversion until a bit of CAA advection moves above it tonight and breaks down the inversion. 850mb winds turn northerly, bringing an end to the moisture transport and likely an end to precip across northern Georgia. The surface front looks like it may struggle to push into the area,

however, as the surface high over the upper Great Plains lags behind with a secondary shortwave embedded in the 500 mb trough over the midwest and NE. This makes things interesting on Monday - temps will likely be lower as cloud cover lingers, but the surface moisture may remain even into northern Georgia. So highs are in the upper 70s and low 80s, but dewpoints remain in the upper 60s to lower 70s. The overall vertical profile across north Georgia won't be conducive to any more rain most likely, but along and south of I-20, things will look increasingly more favorable the further south you go. Rain showers and some isolated thunderstorms are likely to continue across parts of central Georgia, and we will see just how far north we get some shower activity.

Front should push into the area Monday night into early Tuesday as surface high pressure pushes to the east. This should remove some of the surface moisture and allow temps to drop into the upper 50s and lower 60s across most of the CWA. Rain should come to an end across most of the area, though some isolated showers may remain in parts of east central GA (mainly parts of Toombs, Montgomery, Wheeler, and Telfair).

LONG TERM

..
(Tuesday morning through next Saturday)
Issued at 233 PM EDT Sun Oct 4 2026

Rain is expected to come to an end overnight Tuesday morning. Dry air will settle in across much of the area north of a line from Columbus to Augusta with high temperatures in the mid to upper 70s. Overnight lows will fall into the 50s with 40's likely in the higher elevations of northern Georgia. By the time we get to Thursday, rain chances for the CWA drop to nearly zero.

Currently the NHC is keeping an eye on a disturbance off the Yucatan that they're giving a 30% chance of development for. As of writing this, all of the major models are developing it into some kind of tropical system with landfall expected somewhere along the Gulf coast east of NOLA. This would bring another round of wet weather to the area by next weekend, but the extent and intensity of this system is currently only speculation. For now we've kept likely PoPs in the grid for Saturday.

Please continue to monitor the forecast as more information becomes available in regards to the developing tropics. For the most up to date information, please see the National Hurricane Center's discussion and forecast.

Area Forecast Discussion
National Weather Service Peachtree City GA
731 PM EDT Sun Oct 4 2026

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- Widespread rainfall will spread across the area this afternoon and linger into tonight before tapering from north to south Monday morning.
- Locally heavy rainfall could lead to a few flash flooding concerns with heaviest rainfall amounts most likely south of the I-20 corridor today into Monday.
- Drier and largely cooler weather will persist through most of the work week in the wake of a cold front.

&&

.SHORT TERM...

(This afternoon through Monday)

Issued at 233 PM EDT Sun Oct 4 2026

Precipitation has been slower to start than expected today, though we are finally seeing rain build in across far north Georgia with moisture convergence ahead of the front and across central Georgia as deeper moisture continues to push into the CWA. PWAT on the morning sounding was very moist at just above 2" with a profile that is nearly moist adiabatic (with a touch of warming aloft) through the column. This is representative of the airmass ahead of the wedge/CAD that has pushed into NE GA and mostly stalled, which is still moist but naturally drier just as a by-product of being cooler. The question to ask may be "what has taken so long for the rain to get going outside a few locations" and the answer seems to be moisture transport. Morning sounding shows pretty much everything sub-700mb to be stagnant. Can't get isentropic lift going if the air isn't really moving. That is finally changing as rain builds in from the south and west with mesoanalysis showing an uptick in 850 mb transport.

So, the rest of the day does look to be the advertised rainy day, though probably not as consistent or steady as previously advertised. As such, the forecast totals have come down, with most areas looking at 1-2" through Monday. This is a bit higher than the ensemble mean across HREF and REFS, but CAMs look to be over-mixed and underdone with the more stratiform precip within the shallow isentropic lift. Also have to wonder if there is a small DA impact given ongoing radar outage along the northeastern Gulf coast. Higher totals will be possible in places which do see more convective activity - for instance, parts of Cobb County saw upwards of 2" this morning before more steady rain moved in. Isolated amounts of 3-5" will be possible, especially across central Georgia where rain may be a bit heavier at times through Monday morning.

Wedge/CAD has likely stalled with surface high over the NE moving off the coast. Low cloud cover will likely lock it in place for the rest of the afternoon and evening with little in the way of

meaningful processes to break down the inversion until a bit of CAA advection moves above it tonight and breaks down the inversion. 850mb winds turn northerly, bringing an end to the moisture transport and likely an end to precip across northern Georgia. The surface front looks like it may struggle to push into the area, however, as the surface high over the upper Great Plains lags behind with a secondary shortwave embedded in the 500 mb trough over the midwest and NE. This makes things interesting on Monday - temps will likely be lower as cloud cover lingers, but the surface moisture may remain even into northern Georgia. So highs are in the upper 70s and low 80s, but dewpoints remain in the upper 60s to lower 70s. The overall vertical profile across north Georgia won't be conducive to any more rain most likely, but along and south of I-20, things will look increasingly more favorable the further south you go. Rain showers and some isolated thunderstorms are likely to continue across parts of central Georgia, and we will see just how far north we get some shower activity.

Front should push into the area Monday night into early Tuesday as surface high pressure pushes to the east.

Wind favours RWY 35

330° true · 337° magnetic · 5 kt · also NOTAM-affected: 17 and 35

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:54 ET; retrieved Oct 4 22:49 ET; 115 min before this run.
- Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.15 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 330 degrees true, 337 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 35 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 050054Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 240 degrees true, 247 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 28. Wind source: KSAV METAR 050053Z.

Wind favours RWY 36

310° true · 319° magnetic · 5 kt · also NOTAM-affected: 18 and 36

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 310 degrees true, 319 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 050053Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.06 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 350 degrees true, 359 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRE METAR 050053Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:50 ET; retrieved Oct 4 22:49 ET; 119 min before this run.
- Measured values read from the KHXD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 190 degrees true, 198 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 21. Wind source: KHXD METAR 050050Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:54 ET; retrieved Oct 4 22:49 ET; 115 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 030 degrees true, 039 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KROA METAR 050054Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 350 degrees true, 357 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 02. Wind source: KSGJ METAR 050053Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

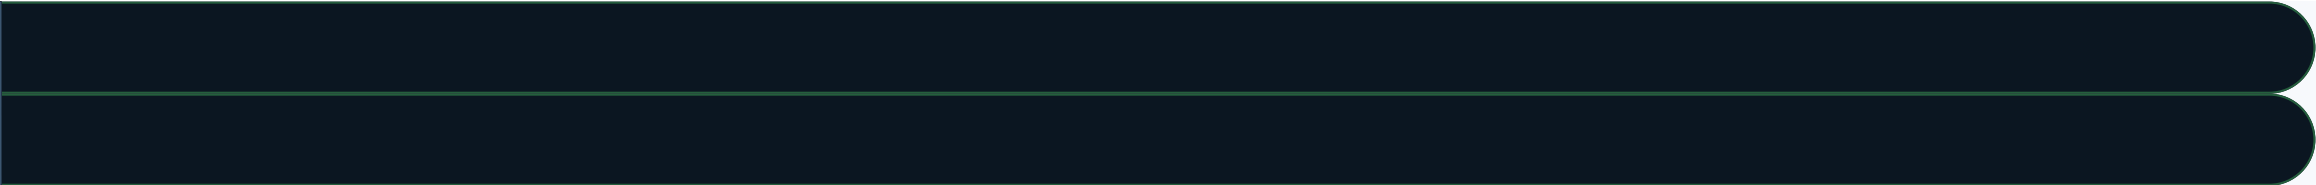

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSGJ this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 070 degrees true, 073 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. The wind is within five degrees of straight across every runway. Runway designators are painted to the nearest ten degrees, so no end is marked as favoured. Wind source: KECP METAR 050053Z.

Wind favours RWY 08

070° true · 072° magnetic · 6 kt · also NOTAM-affected: 08 and 26

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 070 degrees true, 072 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 050053Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.06 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 230 degrees true, 237 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 25R and 25L. Wind source: KDAB METAR 050053Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJKA this run.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 050 degrees true, 052 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KBFM METAR 050053Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

2026-10-05T02:49:51.377711Z.

Source provenance — FAA NMS: Production
source per owner decision 2026-08-09;
technical transport environment remains
preprod. Limited 2026-07-30 spot check
covered KLZU, KAVL, and KSGJ (3 of 30
airports). NOTAMS were read from this source
and used on this card this run. Typed state:
OK. The dot colour reports whether this
source was read this run; technical
environment: preprod.

RUNWAY

Effective 2026-10-02T16:29:00Z → 2026-10-05T16:29:00Z

175 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 010 degrees true, 011 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KGPT METAR 050053Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 090 degrees true, 096 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KSRQ METAR 050053Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:55 ET; retrieved Oct 4 22:49 ET; 114 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 050 degrees true, 056 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 050055Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:50 ET; retrieved Oct 4 22:49 ET; 119 min before this run.
- Measured values read from the KHSA METAR. This is a current surface observation only; it is not a forecast.

- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHSA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 040 degrees true, 041 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KHSA METAR 050050Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:53 ET; retrieved Oct 4 22:49 ET; 116 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 030 degrees true, 031 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 36L and 36R. Wind source: KNEW METAR 050053Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

...ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

010° true · 023° magnetic · 3 kt · also NOTAM-affected: 16 and 34

Evidence & limitations

- METAR source state: ok; observed Oct 4 20:56 ET; retrieved Oct 4 22:49 ET; 113 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 010 degrees true, 023 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 050056Z.

- METAR source state: ok; observed Oct 4 20:51 ET; retrieved Oct 4 22:49 ET; 118 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 340 degrees true, 354 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KBED METAR 050051Z.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 2 SIGMET records, 27 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL, KSHD; Atlantic South: IFR/LIFR at KSGJ; Atlantic South: MVFR at KSSI, KJZI; Atlantic North: IFR/LIFR at KMYR, KCRE.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 050056Z AUTO . AWC METAR state OK for 30/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 30/60 airport-days; planned-window board coverage 1/1; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=2, G-AIRMET=27, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=973; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: unavailable this run.

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 1 of 1 active trip day in Fri Oct 2 – Mon Oct 5, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather.
- Sun Oct 4, operating day ended: not evaluated — this date has elapsed or is in progress for this run (source state: ended).
- Mon Oct 5, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- A forecast flight category is available for 1 of 1 active trip day; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL IFR (2/2 d), KBED VFR (2/2 d), KBFM IFR (2/2 d), KCRE IFR (2/2 d), KCRG IFR (2/2 d), KDAB MVFR (2/2 d), KECP MVFR (2/2 d), KFIN MVFR (2/2 d), KGKT MVFR (2/2 d), KGPT LIFR (2/2 d), KHPN VFR (2/2 d), KHSA LIFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 29 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 29 of 29 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET ZULU — ICE: contains KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSSI 2 NM, KBFM 11 NM, KHXD 14 NM, KGPT 20 NM, KHSA 21 NM, KPNS 22 NM, KLZU 28 NM, KJKA 32 NM, KECP 35 NM, KNEW 44 NM, KCRG 51 NM, KJZI 58 NM, KSGJ 74 NM. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET SIERRA — IFR: contains KGKT, KECP, KHXD, KJZI, KSAV, KJKA, KNEW, KPNS, KMYR, KCRE, KAVL, KGPT, KHSA, KBFM, KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 7 NM, KSSI 20 NM, KROA 51 NM, KCRG 60 NM, KSGJ 84 NM. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET SIERRA — IFR: contains KBED, KROA, KHPN, KSHD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRE 68 NM, KTRI 78 NM, KMYR 81 NM. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KLZU, KROA, KAVL, KTRI, KGKT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 46 NM, KBED 86 NM. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KHPN (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBED 2 NM, KSHD 38 NM. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KLZU, KSHD, KAVL, KROA, KGKT, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring). valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- SIGMET 2C — CONVECTIVE: contains KNEW, KPNS, KJKA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBFM 7 NM, KGPT 8 NM, KHSA 10 NM, KECP 61 NM. valid 2026-10-05 01:55Z to 2026-10-05 02:55Z.
- SIGMET 2E — CONVECTIVE: contains KCRG, KSGJ (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KFIN 21 NM, KSSI 27 NM, KDAB 34 NM, KJZI 36 NM, KCRE 38 NM, KMYR 39 NM, KHXD 44 NM, KSAV 59 NM. valid 2026-10-05 01:55Z to 2026-10-05 02:55Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KHPN 3 NM, KBED 24 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KNEW 1 NM, KJKA 2 NM, KECP 5 NM, KTPF 6 NM, KBFM 7 NM, KHSA 11 NM, KGPT 15 NM, KSPG 18 NM, KPNS 27 NM, KSRQ 37 NM, KDAB 47 NM, KVNC 52 NM, KFIN 65 NM, KSGJ 83 NM, KCRG 85 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 44 NM, KHPN 74 NM. valid 2026-10-05 02:45Z to 2026-10-05 09:00Z.
- 18 of 29 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 2, G-AIRMET 27, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-05T02:49:47.967810+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 9 of 21 current NOTAMs are new by that baseline — A0368/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0369/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0370/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0371/26 (OTHER, last_updated_at 2026-10-02T17:11:00+00:00); A0372/26 (OTHER, last_updated_at 2026-10-02T17:14:00+00:00); 10/005 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0373/26 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0375/26 (OTHER, last_updated_at 2026-10-02T23:37:00+00:00); 10/007 (OBSTRUCTION, last_updated_at 2026-10-04T06:26:00+00:00).
- No service-status wording was found in the published text of the 21 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
