⚠ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

METAR – issued hourly. SPCIs require visibility, wind, and temperature. Issued by the National Weather Service, not a forecast. KLZU observations describe conditions now, not this trip day.

TAF – highest forecast. The National Weather Service issues TAFs by aviation forecasters. TAFs are not a forecast. KLZU observations describe conditions now, not this trip day.

NWS hour – Weather Service hourly forecast. Coarser than the day/night forecast. Not a forecast. KLZU observations describe conditions now, not this trip day.

NWS day/night – Weather Service day/night forecast. Coarser than the hour forecast. Not a forecast. KLZU observations describe conditions now, not this trip day.

GFS MOS – Global Forecast System Model output. Coarser than the hour forecast. Not a forecast. KLZU observations describe conditions now, not this trip day.

GFS ensemble – Global Forecast System Model ensemble output. Coarser than the hour forecast. Not a forecast. KLZU observations describe conditions now, not this trip day.

GFA – Global Forecast System Model output. Coarser than the hour forecast. Not a forecast. KLZU observations describe conditions now, not this trip day.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

SHORT TERM

..
(This afternoon through Friday)
Issued at 213 PM EDT Thu Oct 1 2026

Over the course of the next day, the presiding mid-level ridging that has supported our extended period of tranquil, albeit increasingly unseasonably warm weather will be nudged offshore by an approaching shortwave/surface front duo. As it does so, moisture will rebound appreciably, with dewpoints surging back into the 70s by Friday afternoon. Already this morning's 12Z sounding recorded PWATs of 1.22", double the value from yesterday at this time (0.6"). In the meantime, this morning's fog will give way to yet another day with mostly sunny and dry conditions, and highs rising into the upper 80s to lower 90s. Cannot rule out an isolated shower or thunderstorm developing across our far southern/southeastern tier this afternoon, but a punctuating dry day can be expected for most.

Clear to mostly skies will linger into the night, and in the presence of increasing moisture, development of low clouds and at least patchy dense fog is likely once again Friday morning. Chances for showers and thunderstorms will increase across portions of central Georgia (nearest to the core of Gulf moisture) and far north Georgia (ahead of the approaching front) tomorrow afternoon and evening. With PWATs progged to eclipse 1.5" -- exceeding the 75th percentile and approaching or breaching the 90th percentile for early October -- rain rates could be heavy at times. Conditions will be warmer still on the final day of moderation of this airmass, near 90 for most.

LONG TERM

..
(Saturday morning through next Wednesday)
Issued at 213 PM EDT Thu Oct 1 2026

A marked increase in moisture is expected Saturday through Monday, with the potential for heavy rainfall and localized flash flooding. PWAT upwards of 2 inches per ensemble guidance (above the daily maximum per sounding climo) and favorable jet stream dynamics for ascent are two ingredients that will be in place. That said, much uncertainty remains regarding where the heaviest rainfall and flash flooding risk will be most likely, owing to factors including the strength of a cold air damming (CAD) "wedge" and how far north moisture advection is maximized. Severe weather

is very unlikely given a pattern that limits instability.

Rainfall Uncertainty: Per the 07z National Blend of Models (NBM), the spread between the 10th and 90th percentiles for total rainfall from Saturday morning through Monday morning is 2.75-3.75 inches. This spread is indicative of uncertainty in where exactly the heaviest rainfall will occur this weekend into Monday, and/or how much. To illustrate this -- the latest GEFS places the swath of greatest rainfall across north Georgia, the EPS across central Georgia, and the CMCE across central Georgia (with totals greater than the EPS, but similar to the GEFS). A few CAMs (the NAM and a couple versions of the RRFS) extend into the Saturday/Sunday time frame and depict the isolated nature of maximized rainfall totals. Thus, maintaining our messaging for localized areas of 3-4 inches seems prudent, with the potential for 5+ inches as a reasonable "worst case scenario" in isolated locales.

The Wedge: The strength of high pressure over the Northeast and southeastern Canada will largely govern the strength of the resulting CAD wedge across the southern Appalachians. The global models struggle to resolve the wedge and thus have a tendency to underestimate its strength and erode it too quickly. Where exactly the wedge is situated will have an impact on rainfall totals, as the boundary of the CAD airmass acts as a front and may ramp up shower/storm development, intensity, and longevity. Assuming at least some semblance of a wedge and thus increased clouds and precip, high temperatures on Sunday and Monday should be capped in the 70s and lower 80s (with 60s in the mountains).

An expansive high pressure system will spread across much of the eastern CONUS Tuesday and Wednesday, shunting moisture southward. Where exactly the boundary between the dry airmass of the high pressure and moisture south of the high ends up is uncertain, and will govern where PoPs are focused both days. The GEFS suggests that some moisture will remain across north and central Georgia, while the EPS suggests that moisture will be relegated to south Georgia. For fans of autumn -- highs on Tuesday and Wednesday will be in the upper 60s to mid-70s for the most part, and lows will be in the 50s (with 40s in the mountains).

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- Similar to this morning, areas of fog are possible tomorrow (Friday) morning.

- Saturday through Monday will bring the potential for heavy rainfall and localized flash flooding. Uncertainty remains high regarding where the heaviest rainfall occurs and how much.
- Temperatures will trend downward from Sunday through Wednesday, making for fall-like conditions.

.SHORT TERM...

(This afternoon through Friday)
Issued at 213 PM EDT Thu Oct 1 2026

Over the course of the next day, the presiding mid-level ridging that has supported our extended period of tranquil, albeit increasingly unseasonably warm weather will be nudged offshore by an approaching shortwave/surface front duo. As it does so, moisture will rebound appreciably, with dewpoints surging back into the 70s by Friday afternoon. Already this morning's 12Z sounding recorded PWATs of 1.22", double the value from yesterday at this time (0.6"). In the meantime, this morning's fog will give way to yet another day with mostly sunny and dry conditions, and highs rising into the upper 80s to lower 90s. Cannot rule out an isolated shower or thunderstorm developing across our far southern/southeastern tier this afternoon, but a punctuating dry day can be expected for most.

Clear to mostly skies will linger into the night, and in the presence of increasing moisture, development of low clouds and at least patchy dense fog is likely once again Friday morning. Chances for showers and thunderstorms will increase across portions of central Georgia (nearest to the core of Gulf moisture) and far north Georgia (ahead of the approaching front) tomorrow afternoon and evening. With PWATs progged to eclipse 1.5" -- exceeding the 75th percentile and approaching or breaching the 90th percentile for early October -- rain rates could be heavy at times. Conditions will be warmer still on the final day of moderation of this airmass, near 90 for most.

.LONG TERM...

(Saturday morning through next Wednesday)
Issued at 213 PM EDT Thu Oct 1 2026

A marked increase in moisture is expected Saturday through Monday, with the potential for heavy rainfall and localized flash flooding. PWAT upwards of 2 inches per ensemble guidance (above the daily maximum per sounding climo) and favorable jet stream dynamics for ascent are two ingredients that will be in place. That said, much uncertainty remains regarding where the heaviest rainfall and flash flooding risk will be most likely, owing to factors including the strength of a cold air damming (CAD) "wedge" and how far north moisture advection is maximized. Severe weather is very unlikely given a pattern that limits instability.

Rainfall Uncertainty: Per the 07z National Blend of Models (NBM), the spread between the 10th and 90th percentiles for total

rainfall from Saturday morning through Monday morning is 2.75-3.75 inches. This spread is indicative of uncertainty in where exactly the heaviest rainfall will occur this weekend into Monday, and/or how much. To illustrate this -- the latest GEFS places the swath of greatest rainfall across north Georgia, the EPS across central Georgia, and the CMCE across central Georgia (with totals greater than the EPS, but similar to the GEFS). A few CAMs (the NAM and a couple versions of the RRFs) extend into the Saturday/Sunday time frame and depict the isolated nature of maximized rainfall totals. Thus, maintaining our messaging for localized areas of 3-4 inches seems prudent, with the potential for 5+ inches as a reasonable "worst case scenario" in isolated locales.

The Wedge: The strength of high pressure over the Northeast and southeastern Canada will largely govern the strength of the resulting CAD wedge across the southern Appalachians. The global models struggle to resolve the w

Evidence & limitations

• METAR source state: ok; observed Oct 1 21:54 ET; retrieved Oct 1 23:34 ET; 100 min before this run.

• Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.19 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 160 degrees true, 167 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 17 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 020154Z.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 91% · TS12 34% · wind 5 kt · 66°F; 20:00 ET sky ovc · PoP12 88% · TS12 24% · wind 4 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 91%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

48 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sat, Oct 3 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sat, Oct 3 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR

• **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 91% · TS12 34% · wind 5 kt · 66°F; 20:00 ET sky ovc · PoP12 88% · TS12 24% · wind 4 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 91%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Oct 5 • Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 55% · TS12 14% · wind 4 kt · 63°F; 20:00 ET sky ovc · PoP12 45% · TS12 10% · wind 8 kt · 66°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 14%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.10 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 120 degrees true, 127 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KSAV METAR 020153Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSAV this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:35 ET; retrieved Oct 1 23:34 ET; 119 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 100 degrees true, 107 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KSSI METAR 020135Z.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

weather, and they never change a flight category. NOTAMs were read for KSSI this run.

published VFR Surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- Sun, Oct 4 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 70% · TS12 22% · wind 2 kt · 74°F; 20:00 ET sky ovc · PoP12 82% · TS12 30% · wind 5 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted IFR from sky cover ovc, 12 h thunderstorm probability 22%, 12 h precipitation probability 70%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMS were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 70% · TS12 22% · wind 2 kt · 74°F; 20:00 ET sky ovc · PoP12 82% · TS12 30% · wind 5 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 22%, 12 h precipitation probability 70%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 140 degrees true, 149 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 18 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 020153Z.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

• Sun, Oct 4 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 17%, 12 h precipitation probability 71%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHXD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Oct 4 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 15% · wind 2 kt · 74°F; 20:00 ET sky ovc · PoP12 79% · TS12 21% · wind 6 kt · 73°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 21%, 12 h precipitation probability 79%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KTRI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.13 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 360 degrees true, 008 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KTRI METAR 020153Z.

- **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 89% · TS12 27% · wind 3 kt · 66°F; 20:00 ET sky ovc · PoP12 88% · TS12 24% · wind 3 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 89%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 17%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 80% · TS12 14% · wind 4 kt · 56°F; 20:00 ET sky ovc · PoP12 76% · TS12 17% · wind 4 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 14%, 12 h precipitation probability 80%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. + Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sat, Oct 3 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR

• **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 80% · TS12 14% · wind 4 kt · 56°F; 20:00 ET sky ovc · PoP12 76% · TS12 17% · wind 4 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 14%, 12 h precipitation probability 80%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 39% · TS12 14% · wind 5 kt · 57°F; 20:00 ET sky partly cloudy · PoP12 13% · TS12 3% · wind 9 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 14%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:56 ET; retrieved Oct 1 23:34 ET; 98 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 140 degrees true, 147 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KSGJ METAR 020156Z.

• **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 62% · TS12 28% · wind 5 kt · 74°F; 20:00 ET sky ovc · PoP12 67% · TS12 27% · wind 8 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 28%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 100 degrees true, 107 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KCRG METAR 020153Z.

MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 61% · TS12 23% · wind 3 kt · 76°F; 20:00 ET sky ovc · PoP12 67% · TS12 27% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 23%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:55 ET; retrieved Oct 1 23:34 ET; 99 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 100 degrees true, 107 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. Wind source: KFIN METAR 020155Z.

Evidence & limitations

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · wind 3 kt · 74°F; 20:00 ET sky ovc · PoP12 63% · wind 7 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted IFR from sky cover ovc, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KFIN observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KFIN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 89% · wind 1 kt · 67°F; 20:00 ET sky ovc · PoP12 89% · wind 3 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted IFR from sky cover ovc, 12 h precipitation probability 89%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 63% · TS12 3% · wind 1 kt · 54°F; 20:00 ET sky ovc · PoP12 63% · TS12 15% · wind 3 kt · 57°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 83% · TS12 25% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 86% · TS12 23% · wind 7 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 25%, 12 h precipitation probability 83%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 100 degrees true, 102 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 020153Z.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 83% · TS12 34% · wind 7 kt · 77°F; 20:00 ET sky ovc · PoP12 94% · TS12 31% · wind 8 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 83%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 080 degrees true, 087 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 07L and 07R. Wind source: KDAB METAR 020153Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 35% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 59% · TS12 26% · wind 8 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 35%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 1 22:15 ET; retrieved Oct 1 23:34 ET; 79 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 110 degrees true, 112 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJKA METAR 020215Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 83% · TS12 31% · wind 9 kt · 75°F; 20:00 ET sky ovc · PoP12 93% · TS12 35% · wind 8 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 83%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 100 degrees true, 102 degrees magnetic, at 14 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBFM METAR 020153Z.

GFS MEX - IFR

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 82% · TS12 34% · wind 9 kt · 79°F; 20:00 ET sky ovc · PoP12 94% · TS12 34% · wind 8 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 82%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sat, Oct 3 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · LIFR
- **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 82% · TS12 34% · wind 9 kt · 79°F; 20:00 ET sky ovc · PoP12 94% · TS12 34% · wind 8 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 82%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 68% · TS12 35% · wind 4 kt · 74°F; 20:00 ET sky ovc · PoP12 66% · TS12 25% · wind 6 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 35%, 12 h precipitation probability 68%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 120 degrees true, 121 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KGPT METAR 020153Z.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 82% · TS12 35% · wind 11 kt · 78°F; 20:00 ET sky ovc · PoP12 87% · TS12 35% · wind 7 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted IFR from sky cover ovc, 12 h thunderstorm probability 35%, 12 h precipitation probability 82%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. - Predicted IFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 65%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 30% · wind 7 kt · 80°F; 20:00 ET sky ovc · PoP12 43% · TS12 24% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 30%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 35% · wind 3 kt · 78°F; 20:00 ET sky ovc · PoP12 47% · TS12 23% · wind 5 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 35%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 47% · TS12 26% · wind 5 kt · 78°F; 20:00 ET sky ovc · PoP12 36% · TS12 24% · wind 10 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 24%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 1 21:35 ET; retrieved Oct 1 23:34 ET; 119 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 080 degrees true, 086 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. •

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 48% · TS12 33% · wind 5 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 30% · TS12 24% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

•

Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 33%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

•

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 63% · wind 3 kt; 20:00 ET sky ovc · PoP12 60% · wind 6 kt. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 80% · TS12 34% · wind 9 kt · 78°F; 20:00 ET sky ovc · PoP12 80% · TS12 34% · wind 7 kt · 79°F. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 68% · TS12 37% · wind 7 kt · 73°F; 20:00 ET sky ovc · PoP12 60% · TS12 26% · wind 6 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 37%, 12 h precipitation probability 68%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- **Sun, Oct 4 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 80%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:53 ET; retrieved Oct 1 23:34 ET; 101 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 070 degrees true, 077 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 09L and 09R. Wind source: KOPF METAR 020153Z.

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 42% · wind 8 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 26% · TS12 18% · wind 10 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:56 ET; retrieved Oct 1 23:34 ET; 98 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 140 degrees true, 153 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 16 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 020156Z.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 1% · wind 6 kt · 54°F; 20:00 ET sky partly cloudy · PoP12 6% · TS12 0% · wind 7 kt · 56°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 5% · TS12 1% · wind 6 kt · 54°F; 20:00 ET sky partly cloudy · PoP12 6% · TS12 0% · wind 7 kt · 56°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 5%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Oct 5 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 13% · TS12 0% · wind 4 kt · 55°F; 20:00 ET sky partly cloudy · PoP12 10% · TS12 1% · wind 18 kt · 55°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 0%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Oct 1 21:51 ET; retrieved Oct 1 23:34 ET; 103 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 220 degrees true, 234 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 020151Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. 3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 4 SIGMET records, 20 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Long-range: MVFR at KHPN.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. Trip-window feasibility evidence (Derived): 2 of 4 active trip days carry a forecast flight category and 2 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category.
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time. 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 25 hazard areas retained a coordinate ring this run, 25 of them valid inside the trip window, by the geometric test named below.
- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather. KLZU: 16 of 25 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 4 active trip days in Fri Oct 2 – Mon Oct 5, 2026 carry a forecast flight category and 2 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather.
- Fri Oct 2, 06:00–22:00 ET: IFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sat Oct 3, 06:00–22:00 ET: MVFR — most restrictive forecast flight category; medium confidence; from MOS.
- Sun Oct 4, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Oct 5, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/4 d), KBED VFR (2/4 d), KBFM LIFR (2/4 d), KCRE LIFR (2/4 d), KCRG MVFR (2/4 d), KDAB VFR (2/4 d), KECF MVFR (2/4 d), KFIN VFR (2/4 d), KGKT LIFR (2/4 d), KGPT LIFR (2/4 d), KHPN VFR (2/4 d), KHSA LIFR (2/4 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 25 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 25 of 25 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET TANGO — TURB-HI: contains KECF, KSGJ, KSSI, KCRG (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KFIN 2 NM, KDAB 18 NM, KSAV 21 NM, KHXD 27 NM, KPNS 28 NM, KJKA 31 NM, KJZI 56 NM, KBFM 59 NM, KGPT 77 NM, KNEW 84 NM, KHSA 85 NM, KTPF 93 NM, KSPG 100 NM. valid 2026-10-02 02:45Z to 2026-10-02 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KSSI 13 NM, KOPF 37 NM, KTPF 41 NM, KSAV 43 NM, KHPN 45 NM, KHXD 47 NM, KSPG 54 NM, KCRG 59 NM, KDAB 64 NM, KSRQ 65 NM, KVNC 73 NM, KFIN 73 NM, KJZI 83 NM, KSGJ 83 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-02 02:45Z to 2026-10-02 09:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KHPN 21 NM, KBED 73 NM. valid 2026-10-02 02:45Z to 2026-10-02 09:00Z.
- G-AIRMET TANGO — LLWS: boundary within 100 NM of KBED 22 NM, KHPN 99 NM. valid 2026-10-02 02:45Z to 2026-10-02 09:00Z.

- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 71 NM. valid 2026-10-02 03:10Z to 2026-10-02 09:00Z.
- SIGMET 7E — CONVECTIVE: boundary within 100 NM of KSRQ 19 NM, KVNC 21 NM, KSPG 25 NM, KTPF 37 NM, KECF 43 NM. valid 2026-10-02 02:55Z to 2026-10-02 04:55Z.
- SIGMET 8E — CONVECTIVE: boundary within 100 NM of KOPF 34 NM, KDAB 76 NM, KFIN 95 NM. valid 2026-10-02 02:55Z to 2026-10-02 04:55Z.
- 18 of 25 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 4, G-AIRMET 20, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-02T03:34:48.089868+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 16 of 25 current NOTAMs are new by that baseline — A0360/26 (RUNWAY, last_updated_at 2026-09-29T11:15:00+00:00); 09/040 (RUNWAY, last_updated_at 2026-09-29T11:18:00+00:00); A0361/26 (RUNWAY, last_updated_at 2026-09-29T11:18:00+00:00); 6/6108 (NAV_APPROACH, last_updated_at 2026-09-29T15:28:00+00:00); A0362/26 (NAV_APPROACH, last_updated_at 2026-09-29T15:28:00+00:00); 6/6110 (NAV_APPROACH, last_updated_at 2026-09-29T15:32:00+00:00); 6/6111 (NAV_APPROACH, last_updated_at 2026-09-29T15:32:00+00:00); A0363/26 (NAV_APPROACH, last_updated_at 2026-09-29T15:32:00+00:00); A0364/26 (NAV_APPROACH, last_updated_at 2026-09-29T15:32:00+00:00); A0365/26 (OTHER, last_updated_at 2026-09-30T19:29:00+00:00); 10/001 (OBSTRUCTION, last_updated_at 2026-10-01T08:11:00+00:00); 10/002 (OTHER, last_updated_at 2026-10-01T14:31:00+00:00); 4 further records in section 1.1.
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6108 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6110 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6111 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0362/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0363/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0364/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
