Evidence & limitations

- METAR source state: ok; observed Oct 4 01:56 ET; retrieved Oct 4 03:14 ET; 78 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- Raw METAR: METAR KLZU 040556Z AUTO 00000KT 2 1/2SM BR 22/ A3009 RMK A02 VIS 1V5 SLP190 T0217 10244 20217 58005 \$

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Oct 4

HIGH CONFIDENCE

METAR TAF NWS-hr NWS-day MAV MEX GFA NOTAM

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and Predictions: TFRs, issued continuously by the FAA and Nation valid until cancelled. On this page they are surface advisory evidence about the airport, not are raw weather, and they never change a flight pressurized category. NOTAMs were read for KLZU this This page run.

office and valid time and never interpret them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

The front lingers across far southern Georgi...

SHORT TERM

..
(This afternoon through Monday) Issued at 228 PM EDT Sat Oct 3 2026

Showers got an early start this morning thanks to an unseasonably moist air mass in place across the southeast just ahead of a stalled frontal boundary across northern Georgia. The 12Z sounding

here in Peachtree City measured PWAT of 1.91" - just 0.02" short of the record for 12Z 10/3, though well short of the monthly record (October is still part of hurricane season, as we all have experienced in the past few years). This tropical air mass will linger through the rest of today and get reinforced into Sunday bringing the potential for some heavy rainfall to parts of north and central Georgia.

Showers and a few rumbles of thunder will likely continue through the rest of the day. Temperatures may end up underachieving in many areas compared to the forecast thanks to the cloud cover and rain showers, but in places where the sun does come out it will be warm and moist with highs into the mid 80s. Isentropic analysis of the 300K and 305K isentropes shows some shallow isentropic ascent is happening between 900-800mb which is in line with the vertical profile from this morning's sounding. As we heat up there is a bit of shallow instability in the low to mid-levels that is convectively enhancing some of the showers, leading to brief periods of heavier rainfall and the small chance of seeing a few rumbles of thunder where updrafts can get above the freezing level. Overall amounts shouldn't be anything of concern today in most places, but areas that experience repeated rounds of heavier rainfall could see an instance or two of flash flooding.

Looking at the broader synoptic picture, the trough over the northeast that brought the front in close to us pushes out over the Atlantic today. Surface high pressure sweeps in behind as DAVA and confluent flow aloft build in overhead. Surface high quickly pushes over the Appalachians and our favorite friend "the wedge" (CAD) moves southward into the CWA, pushing into the area tonight. Low clouds, showers of rain and some patchy fog are likely to greet most folks across NE GA and the metro tomorrow morning. Alongside all this, a potent shortwave will dig towards the area, drawing up additional moisture from the gulf from a weak tropical wave. This system will progress across the CWA on Sunday. Isentropic lift will bring a steady rain to basically the entire CWA as moisture is lifted over the wedge and a southward progressing cold front. Some embedded convective elements will be possible, and the very high PWATs mean this rain could be pretty efficient at times. Basically, Sunday will probably be a wash out for most everyone. The upside is the temperatures will be much cooler than the previous few days - back into the 70s for most (and there is a chance some places in NE Georgia don't get out of the upper 60s).

Several inches of additional rainfall will be possible on Sunday. Current hi-res ensemble guidance (both HREF and REFS) show average precip amounts of 1-3" for much of the area, possible a bit higher in south and east central Georgia. 90th percentile amounts likely represent an upper bound of some of the more convective elements, which shows some pockets of 4-5". These amounts are more likely along and south of I-85, where best moisture/lift look like they will coincide. These amounts don't quite warrant flood products. Places below the fall line have sandy soils that can handle quite a bit more rain than the more clay soils above, and rivers, creeks and streams are at the typical October minimums at the start of the "water year". That all said, heavy enough rain in the right place (like the urban jungle of Atlanta) can certainly trigger flash flooding, especially when an inch or two has already fallen over the

past few hours.

Steady rain will continue through the afternoon and well into the evening hours for most. Rainfall should come to and end from northwest to southeast overnight for areas north of I-85 as the front begins to sag further south and drier air pushes in. This will be a slow process, so rain should linger well into the day on Monday for parts of central Georgia, and some showers may be possible as far north as the I-85 corridor depending on how the front stalls. Some clearing should begin Monday night for central Georgia, though again, uncertainty on how far south the front sags mean that showers could linger even into Tuesday.

LONG TERM

..
(Tuesday morning through next Friday) Issued at 228 PM EDT Sat
Oct 3 2026

The front lingers across far southern Georgia Tuesday and Wednesday. There is some uncertainty as to how much rain the very southern counties of our CWA will get as we move into next week. Forecast totals range from a half an inch to an additional two inches until the front is pushed off to the east on Wednesday.

For a majority of the area however, rain is expected to come to an end overnight Tuesday morning. Dry air will settle in across much of the area north of a line from Columbus to Augusta with high temperatures in the mid to upper 70s. Overnight lows will fall into the 50s with 40's likely in the higher elevations of northern Georgia. By the time we get to Thursday, rain chances for the CWA drop to nearly zero.

Long term models indicate that we'll be going into a weekly pattern as another short wave gets set to move through the upper level flow by next weekend which should bring showers and maybe a thunderstorm back into the forecast.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-10-04T07:14:35.937570Z.

48 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:15 ET; retrieved Oct 4 03:14 ET; 119 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 140 degrees true, 147 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KSSI METAR 040515Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:15 ET; retrieved Oct 4 03:14 ET; 119 min before this run.
- Measured values read from the KHXD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 180 degrees true, 188 degrees magnetic, at 12 knots gusting 24 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 21. Wind source: KHXD METAR 040515Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:53 ET; retrieved Oct 4 03:14 ET; 81 min before this run.
- Measured values read from the KTRI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.12 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:29 ET; retrieved Oct 4 03:14 ET; 105 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.25 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 360 degrees true, 009 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 040529Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

13 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:16 ET; retrieved Oct 4 03:14 ET; 118 min before this run.
- Measured values read from the KGKT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.10 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 040 degrees true, 047 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KGKT METAR 040516Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KTYS is used as a proxy; that is a normal condition, not a failure.

Forecast for Aviation and the weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KECP this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

DEWPOINT23 °C

Wind favours RWY 08

070° true · 072° magnetic · 8 kt · also NOTAM-affected: 08 and 26

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:53 ET; retrieved Oct 4 03:14 ET; 81 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 070 degrees true, 072 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind

highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 040553Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

RUNWAY

Effective 2026-09-28T01:25:00Z → 2026-10-12T23:00:00Z

48 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KDAB observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:15 ET; retrieved Oct 4 03:14 ET; 119 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 270 degrees true, 272 degrees magnetic, at 6 knots gusting 14 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 27. Wind source: KJKA METAR 040515Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:53 ET; retrieved Oct 4 03:14 ET; 81 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.

- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 150 degrees true, 152 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KBFM METAR 040553Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:31 ET; retrieved Oct 4 03:14 ET; 103 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 090 degrees true, 091 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KGPT METAR 040531Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:53 ET; retrieved Oct 4 03:14 ET; 81 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 130 degrees true, 136 degrees magnetic, at 11 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 040553Z.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:15 ET; retrieved Oct 4 03:14 ET; 119 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 120 degrees true, 126 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KTPF METAR 040515Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEY) — the extended

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:15 ET; retrieved Oct 4 03:14 ET; 119 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 100 degrees true, 106 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KVNC METAR 040515Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: partial).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Oct 4 01:56 ET; retrieved Oct 4 03:14 ET; 78 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.30 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 050 degrees true, 063 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 040556Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GES MOS (MAV) — Model Output Statistics

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 7 SIGMET records, 24 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: IFR/LIFR at KAVL, KGKT; Mountain: MVFR at KTRI, KROA; Atlantic South: MVFR at KSAV; Atlantic North: IFR/LIFR at KCRG.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows

- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 040556Z AUTO . AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=7, G-AIRMET=24, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=996; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: unavailable this run.

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category.
- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather. 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 31 hazard areas retained a coordinate ring this run, 31 of them valid inside the trip window, by the geometric test named below. KLZU: 10 of 21 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 2 – Mon Oct 5, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 2 of 2 active trip days in Fri Oct 2 – Mon Oct 5, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: no usable flight category this run (observation state: ok). That is a source state, not a statement about the weather.
- Sun Oct 4, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Oct 5, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from MOS.
- A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.

- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/2 d), KBED MVFR (2/2 d), KBFM LIFR (2/2 d), KCRE LIFR (2/2 d), KCRG IFR (2/2 d), KDAB IFR (2/2 d), KECP IFR (2/2 d), KFIN IFR (2/2 d), KGKT LIFR (2/2 d), KGPT LIFR (2/2 d), KHPN MVFR (2/2 d), KHSA LIFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 31 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 31 of 31 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KBFM, KNEW, KGPT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KJKA 7 NM, KPNS 22 NM, KECP 94 NM. valid 2026-10-04 05:51Z to 2026-10-04 09:00Z.
- G-AIRMET SIERRA — IFR: contains KSAV, KMYR, KCRE, KSHD, KROA, KTRI, KAVL, KGKT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KLZU 2 NM, KJZI 11 NM, KHXD 11 NM, KSSI 26 NM, KCRG 55 NM, KECP 76 NM, KSGJ 78 NM. valid 2026-10-04 05:51Z to 2026-10-04 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KLZU, KSHD, KROA, KAVL, KGKT, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 43 NM, KBED 50 NM. valid 2026-10-04 05:51Z to 2026-10-04 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KSHD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KROA 38 NM, KHPN 62 NM, KTRI 87 NM. valid 2026-10-04 02:45Z to 2026-10-04 09:00Z.
- SIGMET 20C — CONVECTIVE: contains KBFM, KPNS, KGPT, KJKA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KECP 12 NM, KNEW 13 NM. valid 2026-10-04 06:55Z to 2026-10-04 08:55Z.
- SIGMET 42E — CONVECTIVE: contains KJZI, KMYR, KCRE (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHXD 1 NM, KSAV 16 NM, KSSI 21 NM, KDAB 25 NM, KFIN 28 NM, KSGJ 30 NM, KCRG 35 NM. valid 2026-10-04 06:55Z to 2026-10-04 08:55Z.
- SIGMET 44E — CONVECTIVE: contains KSRQ, KTPF, KSPG (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KVNC 8 NM, KECP 43 NM, KDAB 95 NM. valid 2026-10-04 06:55Z to 2026-10-04 08:55Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KVNC 12 NM, KSRQ 13 NM, KSPG 17 NM, KTPF 29 NM, KNEW 29 NM, KGPT 40 NM, KBFM 44 NM, KOPF 60 NM, KPNS 63 NM, KJKA 68 NM, KLZU 73 NM, KCRG 85 NM, KSSI 95 NM, KSGJ 96 NM, KECP 96 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-04 05:50Z to 2026-10-04 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 23 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-04 05:50Z to 2026-10-04 09:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KSHD 97 NM. valid 2026-10-04 05:50Z to 2026-10-04 09:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KGKT 88 NM, KLZU 95 NM. valid 2026-10-04 05:50Z to 2026-10-04 09:00Z.
- SIGMET 19C — CONVECTIVE: boundary within 100 NM of KNEW 70 NM. valid 2026-10-04 06:55Z to 2026-10-04 08:55Z.
- 19 of 31 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 7, G-AIRMET 24, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-04T07:14:30.438207+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 10 of 21 current NOTAMs are new by that baseline — 10/001 (OBSTRUCTION, last_updated_at 2026-10-01T08:11:00+00:00); A0368/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0369/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0370/26 (NAV_APPROACH, last_updated_at 2026-10-02T16:17:00+00:00); A0371/26 (OTHER, last_updated_at 2026-10-02T17:11:00+00:00); A0372/26 (OTHER, last_updated_at 2026-10-02T17:14:00+00:00); 10/005 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0373/26 (OTHER, last_updated_at 2026-10-02T18:27:00+00:00); A0375/26 (OTHER, last_updated_at 2026-10-02T23:37:00+00:00); 10/007 (OBSTRUCTION, last_updated_at 2026-10-04T06:26:00+00:00).
- No service-status wording was found in the published text of the 21 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
