Evidence & limitations

- METAR source state: ok; observed Sep 11 13:56 ET; retrieved Sep 11 15:32 ET; 96 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- Raw METAR: METAR KLZU 111756Z 15006KT 10SM SCT048 31/22 A2999 RMK A02 SLP153 T03110217 10328 20228 58018 \$

• KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 150 degrees true, 156 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. The wind is within five degrees of straight across every runway. Runway designators are painted to the nearest ten degrees, so no end is marked as favoured. Wind source: KLZU METAR 111756Z.

Evidence & limitations

- The visible badge names the contributing product. Exact issuance, retrieval, and member-period provenance remains in Day evidence & planning note below.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 50%, 12 h precipitation probability 43%, sky cover clear, 12 h thunderstorm probability 25%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. It describes the whole trip day, not this row: MEX steps in twelve-hour blocks and the worst block is reported. Verify day-of against a TAF or short-range MOS.
- Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Thu Sep 10 · 12:00 AM ET.

SHORT TERM

..
(This afternoon through Saturday)
Issued at 255 PM EDT Fri Sep 11 2026

Showers and thunderstorms were quick to develop today with activity starting to fire as early as 12PM. The initial push of precipitation is currently moving through Columbus with additional convection developing as far north as I-20 where a differential heating boundary has set up. Per the 12z FFC sounding, PWs are sitting right at 1.87" which is above the 90th percentile climatologically. Thus, showers and thunderstorms will be efficient rain producers and could drop a quick 1-2" in a short amount of time lending to a non-zero chance of localized flash flooding in the typical spots. Frequent lightning and gusty winds (up to 40 MPH) will accompany all storms. Sufficient instability will make up for lack of shear overall and lend to an isolated damaging wind gust threat across North Georgia (along/north of I-20) through this evening.

A secondary push of precipitation is still being highlighted by some of the hi-res guidance moving into western Georgia after 3-4 AM in association with a weak surface low. Patchy fog and low clouds are also likely to be around early Saturday as moisture remains high and winds remain light. However, coverage of fog will be highly dependent on any lingering showers and storms which could inhibit development and extent. Otherwise, a rinse and repeat forecast (literally) can be expected for North and Central GA Saturday. Scattered to numerous showers and storms peaking during the afternoon and potentially lingering after the sun goes down.

LONG TERM

..
(Sunday morning through next Thursday)
Issued at 255 PM EDT Fri Sep 11 2026

By Sunday morning the main frontal boundary from the short term will have moved into central GA with a slightly drier airmass moving into North GA. Deep moisture from the Gulf will remain in place across central and south GA with diurnally driven storms expected. This frontal boundary continue to move south clearing the area by Mon morning. The drier airmass remain across the area through the middle of next week keeping precipitation chances at 20% or less each day (Mon-Thu).

Temps will stay in the upper 80s to middle 90s through day 7 but with the drier airmass moving in Heat index values will slowly fall through the middle of next week. Dewpoints Sunday and Mon will be in the lower to middle 70s but they will fall into the lower to middle 60s by Wed. Even with temps still in the lower 90s it will feel a bit more comfortable.

Temps will stay in the upper 80s to middle 90s through day 7 but with the drier airmass moving in Heat index values will slowly fall through the middle of next week. Dewpoints Sunday and Mon will be in the lower to middle 70s but they will fall into the lower to middle 60s by Wed. Even with temps still in the lower 90s it will feel a bit more comfortable.

(18Z TAFS)
Issued at 131 PM EDT Fri Sep 11 2026

Mostly VFR to start with conds likely to deteriorate after 06z. Sct to BKN cigs 2.5-5kft with -shra/vcsh prevailing for the better part of the afternoon (18-02z) for all sites. Still a good chance for greater coverage of IFR btwn 08-14z with iso to sct shra and MVFR vsbys in BR. Big question for overnight is if any shra activity limits IFR (and lower) cig coverage. Anticipating at least MVFR but patchy IFR is on the table. Near due S wind, favoring SSW at 4-8kts outside of any convection.

Evidence & limitations

• METAR source state: ok; observed Sep 11 13:54 ET; retrieved Sep 11 15:32 ET; 98 min before this run.

• Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.07 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 160 degrees true, 167 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 17 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 111754Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 41%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KAVL observation was read this run. It describes conditions now, not this trip day.

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 61% · TS12 38% · wind 7 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 41% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Sep 11 13:35 ET; retrieved Sep 11 15:32 ET; 117 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.

- The complete raw METAR remains in this airport's Raw products disclosure.

• KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 150 degrees true, 157 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 56% · wind 7 kt · 77°F; 20:00 ET sky ovc · PoP12 39% · TS12 39% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 56%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:35 ET; retrieved Sep 11 15:32 ET; 117 min before this run.
- Measured values read from the KJZI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 170 degrees true, 178 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KJZI METAR 111735Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 57% · TS12 32% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 40% · TS12 36% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 32%, 12 h precipitation probability 57%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 180 degrees true, 189 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KMYR METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 54% · TS12 32% · wind 10 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 52% · TS12 35% · wind 11 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 32%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 180 degrees true, 189 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 56% · TS12 32% · wind 11 kt · 78°F; 20:00 ET sky ovc · PoP12 55% · TS12 35% · wind 11 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 32%, 12 h precipitation probability 56%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 61% · TS12 38% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 36% · TS12 42% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 38%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KTRI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 020 degrees true, 028 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The wind-favoured end 05 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 50% · wind 3 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 13% · TS12 18% · wind 6 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 50%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Sep 11 13:54 ET; retrieved Sep 11 15:32 ET; 98 min before this run.
- Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 050 degrees true, 059 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 62% · TS12 47% · wind 3 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 23% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 47%, 12 h precipitation probability 62%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:56 ET; retrieved Sep 11 15:32 ET; 96 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 090 degrees true, 097 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KSGJ METAR 111756Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 42% · TS12 63% · wind 7 kt · 74°F; 20:00 ET sky ovc · PoP12 34% · TS12 32% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 63%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSGJ this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 45% · TS12 64% · wind 6 kt · 75°F; 20:00 ET sky ovc · PoP12 33% · TS12 35% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 64%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:50 ET; retrieved Sep 11 15:32 ET; 102 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 240 degrees true, 247 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · wind 5 kt · 73°F; 20:00 ET sky ovc · PoP12 38% · wind 6 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 36% · wind 1 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 8% · wind 4 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KTYS is used as a proxy; that is a normal condition, not a failure.

Forecast for Aviation and the weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:35 ET; retrieved Sep 11 15:32 ET; 117 min before this run.
- Measured values read from the KSHD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 060 degrees true, 070 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The wind-favoured end 05 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSHD METAR 111735Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 70% · TS12 42% · wind 2 kt · 69°F; 20:00 ET sky ovc · PoP12 36% · TS12 29% · wind 4 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 42%, 12 h precipitation probability 70%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.

- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 080 degrees true, 083 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KECP METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · TS12 55% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 54% · TS12 26% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 55%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 160 degrees true, 162 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 53% · wind 6 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 46% · TS12 23% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 53%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only; it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 53% · wind 6 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 46% · TS12 23% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 53%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KDAB METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 210 degrees true, 217 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 25R and 25L. Wind source: KDAB METAR 111753Z.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:56 ET; retrieved Sep 11 15:32 ET; 96 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 180 degrees true, 182 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. - Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 230 degrees true, 232 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KBFM METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 48% · wind 3 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 42% · TS12 27% · wind 5 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 48%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- **Sun, Sep 13 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 48%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 290 degrees true, 291 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KGPT METAR 111753Z.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 180 degrees true, 186 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 111753Z.

- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Evidence & limitations

- METAR source state: ok; observed Sep 11 13:35 ET; retrieved Sep 11 15:32 ET; 117 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 220 degrees true, 226 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KTPF METAR 111735Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 59% · wind 4 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 47% · TS12 29% · wind 5 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 59%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. Evidence & limitations

• METAR source state: ok; observed Sep 11 13:53 ET; retrieved Sep 11 15:32 ET; 99 min before this run.

• Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.01 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 230 degrees true, 236 degrees magnetic, at 8 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KSRQ METAR 111753Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 46% · wind 4 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 48% · TS12 37% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · wind 4 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 33% · wind 5 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 36% · wind 6 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 31% · TS12 12% · wind 6 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 36%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 51% · TS12 87% · wind 7 kt · 80°F; 20:00 ET sky ovc · PoP12 59% · TS12 44% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 87%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

- **Sun, Sep 13 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 87%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 310 degrees true, 323 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 111756Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 96% · TS12 2% · wind 5 kt · 68°F; 20:00 ET sky ovc · PoP12 83% · TS12 31% · wind 5 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 2%, 12 h precipitation probability 96%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 13:51 ET; retrieved Sep 11 15:32 ET; 101 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 290 degrees true, 304 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The wind-favoured end 29 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 111751Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 61% · TS12 0% · wind 5 kt · 64°F; 20:00 ET sky ovc · PoP12 80% · TS12 7% · wind 6 kt · 64°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 0%, 12 h precipitation probability 61%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 15 SIGMET records, 24 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSGJ; Gulf East: IFR/LIFR at KECP; Gulf West: MVFR at KBFM.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 11 – Mon Sep 14, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 4 active trip days in Fri Sep 11 – Mon Sep 14, 2026 carry a forecast flight category and 2 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 11, 15:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sat Sep 12, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- Sun Sep 13, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Sep 14, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL IFR (2/4 d), KBED VFR (2/4 d), KBFM IFR (2/4 d), KCRE MVFR (2/4 d), KCRG IFR (2/4 d), KDAB MVFR (2/4 d), KCEP MVFR (2/4 d), KFIN MVFR (2/4 d), KGKT VFR (2/4 d), KGPT MVFR (2/4 d), KHPN VFR (2/4 d), KHSA MVFR (2/4 d); 17 further airports in section 2.
- NOTAMS: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 40 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 40 of 40 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.

- 25 of 40 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 15, G-AIRMET 24, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-11T19:32:08.862953+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 17 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 09/014 (OTHER) states: “SVC AUTOMATED WX BCST SYSTEM NOT AVBL”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
