SHORT TERM

..
(This afternoon through Wednesday)
Issued at 234 PM EDT Tue Oct 6 2026

It's a beautiful afternoon out there with current temperature readings in the 70s areawide (60s in the mountains) under mostly sunny skies -- if you can, get outside and enjoy the day! Surface high pressure will remain in place across the Mid-Atlantic States resulting in mostly dry and fairly seasonal temperatures across the forecast area through the short-term period (thru early Thursday). Tonight temperatures will drop primarily in the 50s (40s in the mountains) under mostly clear skies. Very similar trends on Wednesday with daytime temperatures in the 70s to low 80s and sunny skies for most with lingering cloudiness across the far southern tier of counties.

LONG TERM

..
(Thursday morning through next Monday)

Issued at 234 PM EDT Tue Oct 6 2026

The extended periods begin dry with high pressure centered over the Carolinas and North GA. Near-seasonal/slightly-above-seasonal temperatures, thanks to a mid-upper-level pattern that favors subsidence and high pressure across the Southeast. This ridge begins to break down Friday allowing the old frontal boundary across central FL to begin moving back north.

Saturday through Monday:

Our eyes will be on the Gulf over the coming days regarding the development and evolution of an area of low pressure currently in the southwestern Gulf. At this time, the National Hurricane Center (NHC) has an almost 100% chance of tropical formation over the next 48 hours. Features that will impact the track of this system include: The high high pressure along the Eastern Seaboard (which could induce cold air damming or the "wedge" across GA and a longwave trough across the western CONUS. Steering flow between these two features should bring whatever comes of the system northward into the northern Gulf and somewhere along the Gulf Coast region. As far as potential impacts to north and central Georgia -- it is much too early to say. Right now the biggest impact will be inches of precipitation across the region but exactly where and how much is still up in the air. Current QPF predictions from WPC showing around 1 to 3 inches across the CWA. We should also see some breezy conditions but like the precipitation, just how strong will be highly dependent on the eventual track of the storm. At this time, sustained winds up to 15 mph and gusts up to 25-30 mph are on the table. Flash flooding and/or rises on rivers, creeks, and streams would also be possible.

The current models do show this tropical low pressure system making landfall this weekend and making its way northward into the beginning of next week. The differences in timing, location, and intensity vary greatly but they all do show it weakening substantially with a drier airmass moving into the region by Mon/Tue. As we get into next week this should bring cooler daytime high temperatures in the 70s to lower 80s.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 8% · TS12 0% · wind 3 kt · 55°F; 20:00 ET sky clear · PoP12 4% · TS12 1% · wind 7 kt · 70°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 7% · TS12 1% · wind 4 kt · 56°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 2% · wind 8 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KSAV METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 020 degrees true, 027 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. NOTAM-affected runway ends, hatched separately from the wind

highlight: 01 and 19. The wind-favoured end 01 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSAV METAR 070253Z.

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 12% · TS12 3% · wind 5 kt · 66°F; 20:00 ET sky ovc · PoP12 24% · TS12 3% · wind 8 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:55 ET; retrieved Oct 7 00:35 ET; 100 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 030 degrees true, 037 degrees magnetic, at 12 knots gusting 21 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSSI METAR 070255Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 39% · TS12 9% · wind 7 kt · 71°F; 20:00 ET sky ovc · PoP12 51% · TS12 15% · wind 14 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 9%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:55 ET; retrieved Oct 7 00:35 ET; 100 min before this run.
- Measured values read from the KJZI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.01 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 030 degrees true, 038 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KJZI METAR 070255Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 5% · TS12 1% · wind 3 kt · 68°F; 20:00 ET sky ovc · PoP12 17% · TS12 1% · wind 9 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 1%, 12 h precipitation probability 17%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 030 degrees true, 039 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 070253Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 1%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

GFS MOS (MEX) outlook does reach this day and is shown as a labelled rough outlook; it never states a flight category.

NOTAMS, issued continuously by the TAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.06 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 010 degrees true, 019 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRE METAR 070253Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 1%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:55 ET; retrieved Oct 7 00:35 ET; 100 min before this run.
- Measured values read from the KHXD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 040 degrees true, 048 degrees magnetic, at 10 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 03. Wind source: KHXD METAR 070255Z.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 4%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. - Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

range MOS product, issued twice a day in twelve-hourly steps out to about 192 hours. Coarse, but the only station-calibrated numeric guidance that reaches the far end of a long weekend. This card shows it only as a labelled rough outlook and never as a resolved forecast. A station-calibrated MEX MOS product was read for this airport this run (state: ok).

valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 22% · TS12 1% · wind 4 kt · 59°F; 20:00 ET sky ovc · PoP12 63% · TS12 1% · wind 7 kt · 60°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 1%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 26%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KCRG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 040 degrees true, 047 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The wind-favoured end 05 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KCRG METAR 070253Z.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 23% · wind 7 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 33% · TS12 19% · wind 12 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 23%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 38% · wind 5 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 32% · wind 9 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 38%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 020 degrees true, 023 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KECP METAR 070253Z.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 070 degrees true, 072 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 070253Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published WPC surface chart matches this period and is shown in the dropdown with its

Category and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:55 ET; retrieved Oct 7 00:35 ET; 100 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 060 degrees true, 062 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJKA METAR 070255Z.

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

published WFO surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 6% · TS12 8% · wind 10 kt · 71°F; 20:00 ET sky clear · PoP12 7% · TS12 5% · wind 13 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 18%, 12 h precipitation probability 82%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Sun, Oct 11 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 22%, 12 h precipitation probability 66%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 070 degrees true, 071 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 9%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 34%, 12 h precipitation probability 70%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 6 22:55 ET; retrieved Oct 7 00:35 ET; 100 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.87 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 130 degrees true, 136 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 30%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 22%, 12 h precipitation probability 49%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 050 degrees true, 056 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 070255Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 66% · TS12 41% · wind 9 kt · 75°F; 20:00 ET sky ovc · PoP12 37% · TS12 28% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 41%, 12 h precipitation probability 66%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 59% · wind 12 kt; 20:00 ET sky ovc · PoP12 84% · wind 12 kt. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h precipitation probability 84%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Oct 6 22:53 ET; retrieved Oct 7 00:35 ET; 102 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.91 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 340 degrees true, 347 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 30. NOTAM-affected runway ends, hatched separately from the wind highlight: 12 and 30. The wind-favoured end 30 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KOPF METAR 070253Z.

Evidence & limitations

• METAR source state: ok; observed Oct 6 22:56 ET; retrieved Oct 7 00:35 ET; 99 min before this run.

• Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.08 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 330 degrees true, 343 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 070256Z.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 4% · TS12 1% · wind 5 kt · 54°F; 20:00 ET sky clear · PoP12 2% · TS12 0% · wind 12 kt · 58°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 65% · TS12 3% · wind 5 kt · 58°F; 20:00 ET sky ovc · PoP12 50% · TS12 12% · wind 11 kt · 61°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 3%, 12 h precipitation probability 65%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

- METAR source state: ok; observed Oct 6 22:51 ET; retrieved Oct 7 00:35 ET; 104 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

Land runways drawn: 11/29, 05/23. Wind from 240 degrees true, 254 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. - Predicted VFR from sky cover clear, 12 h thunderstorm probability 0%, 12 h precipitation probability 4%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 5 SIGMET records, 17 G-AIRMET records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV, KSSI; Gulf East: IFR/LIFR at KECP; Gulf East: MVFR at KVNC; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip-window feasibility evidence (Derived): 0 of 4 active trip days carry a forecast flight category and 4 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Oct 9 – Mon Oct 12, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time. 0 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking.
- 22 hazard areas retained a coordinate ring this run, 0 of them valid inside the trip window, by the geometric test named below. KLZU current observation: VFR — conditions now, not a trip day.
- KLZU: 3 of 13 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Oct 9 – Mon Oct 12, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): not assessable from forecast categories — 0 of 4 active trip days in Fri Oct 9 – Mon Oct 12, 2026 carry a forecast flight category and 4 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Oct 9, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sat Oct 10, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Sun Oct 11, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Oct 12, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 0 of 4 active trip days; 4 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 0 of 29 covered airports resolve a forecast flight category on at least one active trip day; 29 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- No covered airport resolves a forecast flight category on an active trip day in this run, so no per-airport category is listed. That is the honest answer at this lead time, not a statement that the airports are unusable.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 22 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- None of the 22 retained hazard areas is valid inside the planned trip window. SIGMETs, G-AIRMETs and CWAs are short-fuse products, so what follows describes conditions now and in the next few hours — it is not a forecast for the trip, and it must not be read as one.
- G-AIRMET ZULU — ICE: contains KECF, KJZI, KFIN, KSAV, KHXD, KSGJ, KCRG, KSSI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KDAB 5 NM, KMYR 30 NM, KCRE 34 NM, KPNS 42 NM, KJKA 50 NM, KTPF 65 NM, KSPG 74 NM, KBFM 79 NM, KSRQ 96 NM. valid 2026-10-07 02:45Z to 2026-10-07 09:00Z.
- G-AIRMET SIERRA — IFR: contains KSSI, KSRQ, KECF, KSGJ, KDAB, KFIN, KCRG, KSPG, KTPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KVNC 3 NM, KSAV 49 NM, KPNS 61 NM, KHXD 65 NM, KJKA 81 NM, KOPF 97 NM. valid 2026-10-07 02:45Z to 2026-10-07 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KTRI, KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KGKT 1 NM, KROA 11 NM, KSHD 11 NM, KLZU 12 NM. valid 2026-10-07 02:45Z to 2026-10-07 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KPNS, KECF, KSSI, KCRE, KMYR, KHXD, KSAV, KJZI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 10 NM, KJKA 14 NM, KBFM 25 NM, KSGJ 35 NM, KLZU 35 NM, KFIN 65 NM, KGPT 77 NM, KDAB 84 NM, KAVL 85 NM. valid 2026-10-07 02:45Z to 2026-10-07 09:00Z.
- SIGMET 14E — CONVECTIVE: contains KVNC (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSRQ 6 NM, KSPG 28 NM, KTPF 33 NM, KOPF 89 NM, KDAB 90 NM. valid 2026-10-07 03:55Z to 2026-10-07 05:55Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KHPN 68 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-07 02:45Z to 2026-10-07 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KTPF 1 NM, KSPG 10 NM, KSRQ 30 NM, KVNC 48 NM, KJKA 50 NM, KPNS 50 NM, KECF 72 NM, KBFM 78 NM, KDAB 91 NM, KOPF 94 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-10-07 02:45Z to 2026-10-07 09:00Z.
- SIGMET 12E — CONVECTIVE: boundary within 100 NM of KOPF 33 NM. valid 2026-10-07 03:55Z to 2026-10-07 05:55Z.
- SIGMET 15E — CONVECTIVE: boundary within 100 NM of KTPF 15 NM, KSPG 24 NM, KSRQ 46 NM, KFIN 66 NM, KVNC 66 NM, KDAB 66 NM, KSGJ 70 NM, KCRG 77 NM. valid 2026-10-07 03:55Z to 2026-10-07 05:55Z.
- 13 of 22 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 5, G-AIRMET 17, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMS

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-10-07T04:35:58.101075+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 3 of 13 current NOTAMs are new by that baseline — A0376/26 (OTHER, last_updated_at 2026-10-05T15:15:00+00:00); A0377/26 (RUNWAY, last_updated_at 2026-10-05T17:18:00+00:00); 10/008 (OBSTRUCTION, last_updated_at 2026-10-05T23:27:00+00:00).
- No service-status wording was found in the published text of the 13 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
