⚠ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

METAR – issued hourly. The NWS issues a METAR every hour, including visibility, wind, and other conditions. KLZU observations are included in the METAR. The METAR is used for flight planning and is the primary source of weather information for pilots.

TAF – The National Weather Service issues a TAF every 6 hours. It contains a forecast of weather conditions for the next 24 hours. The TAF is used for flight planning and is the primary source of weather information for pilots.

NWS hour – The National Weather Service issues a weather forecast every hour. It contains a forecast of weather conditions for the next 24 hours. The NWS hour is used for flight planning and is the primary source of weather information for pilots.

NWS day/night – The National Weather Service issues a weather forecast every 6 hours. It contains a forecast of weather conditions for the next 24 hours. The NWS day/night is used for flight planning and is the primary source of weather information for pilots.

GFS M – The Global Forecast System (GFS) is a numerical weather prediction model. It is used to forecast weather conditions for the next 24 hours. The GFS M is used for flight planning and is the primary source of weather information for pilots.

GFS E – The Global Forecast System (GFS) is a numerical weather prediction model. It is used to forecast weather conditions for the next 24 hours. The GFS E is used for flight planning and is the primary source of weather information for pilots.

GFA – The Global Forecast System (GFS) is a numerical weather prediction model. It is used to forecast weather conditions for the next 24 hours. The GFA is used for flight planning and is the primary source of weather information for pilots.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

SHORT TERM

..
(Today through Monday)
Issued at 208 AM EDT Sun Sep 6 2026

Heat Concerns and Severe Thunderstorm Potential Today:

A warm and humid airmass remains pooled over the area, with temperatures climbing from the 70s this morning to the mid to upper 90s this afternoon. A Heat Advisory is in effect for most of the area through this evening as heat index values will again peak in the 100-105F range. Please be sure to take precautions if you are out in the heat!

Over the course of the day, a mid-level shortwave and associated surface 'cold' front will drop across the Southern Appalachians and into our area. The strong forcing from these features combined with the humid and unstable airmass in place will support numerous showers and storms this afternoon and evening. Given that MLCAPE values are forecast to be around 2500-3000 J/kg with steep low-level lapse rates and increasing effective shear of 20-25kts, several storms will likely be severe. We could see initially discrete storms eventually form into a longer-lived line by the evening hours. Any severe storms would be capable of producing damaging wind gusts, quarter-size hail, frequent lightning, and locally heavy rainfall. SPC has noted this severe weather threat with a Slight Risk (Level 2 of 5) covering most of our area. Another threat we will have to watch out for is localized flash flooding in urban and poor-drainage areas due to the potential for repeated rounds of storms with efficient rainfall rates.

Cooler Temperatures and Rain Showers on Monday:

Following the frontal boundary this evening, a cooler airmass will spread across the area overnight into Monday within east-northeast flow. This wedge-like pattern of breezy easterly winds and cloudy skies will make things feel much cooler than recent days, and high temperatures will struggle to get out of the low to mid 80s across most of the area. While the airmass will be cooler, the drier air will not move in until Monday night. So, we will likely still have enough forcing, moisture, and instability to support

isolated to scattered rain showers or weak thunderstorms across the area.

LONG TERM

..
(Monday night through Saturday)
Issued at 208 AM EDT Sun Sep 6 2026

The long term beings with a mid-level ridge centered over the Southern Plains building eastward toward our area through the first part of next week. A backdoor 'cold' front will push through the CWA on Monday, setting up a modified wedge pattern over the area with breezy east to northeast winds through mid-week. We can expect a decent reduction in our daytime high temperatures, ranging from the mid 70s in our mountain counties to the low-to-mid 80s elsewhere, followed by a warming trend back into the upper 80s to lower 90s through the remainder of the week.

As the ridge continues to migrate eastward through mid-week, we can expect a general reduction in shower and thunderstorm chances across the northern and central areas, with isolated to scattered afternoon thunderstorms confined mostly south of a line from Columbus to Macon, where greater instability remains. For the second half of the week, the mid-level ridge will retrograde back to the west, allowing an increase in gulf moisture and instability as surface winds shift back toward the southwest. This will also allow for an increase in diurnal thunderstorm chances area-wide as we move into next weekend.

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 270 degrees true, 277 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KSSI METAR 061215Z.

Evidence & limitations

- METAR source state: ok; observed Sep 6 08:15 ET; retrieved Sep 6 10:11 ET; 116 min before this run.
- Measured values read from the KSSI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.87 inHg.

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 010 degrees true, 019 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 061253Z.

Evidence & limitations

- METAR source state: ok; observed Sep 6 08:53 ET; retrieved Sep 6 10:11 ET; 78 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.89 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- The runway schematic is alignment-only; verify current runway use and NOTAMs.

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 030 degrees true, 039 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRE METAR 061253Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMS were read for KTRI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Land runways drawn: 06/24, 16/34. Wind from 130 degrees true, 139 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 270 degrees true, 277 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 31. Wind source: KSGJ METAR 061256Z.

Evidence & limitations

- METAR source state: ok; observed Sep 6 08:56 ET; retrieved Sep 6 10:11 ET; 75 min before this run.

KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 340 degrees true, 343 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KECP METAR 061253Z.

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 320 degrees true, 322 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KBFM METAR 061253Z.

Evidence & limitations

- METAR source state: ok; observed Sep 6 08:53 ET; retrieved Sep 6 10:11 ET; 78 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.94 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- The runway schematic is alignment-only; verify current runway use and NOTAMs.

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 300 degrees true, 301 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KGPT METAR 061253Z.

METAR — the routine surface observation issued hourly by the reporting station, with

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KTPA is used as a proxy; that is a normal condition, not a failure.

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 320 degrees true, 321 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 36L and 36R. Wind source: KNEW METAR 061253Z.

Evidence & limitations

- METAR source state: ok; observed Sep 6 08:53 ET; retrieved Sep 6 10:11 ET; 78 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- The runway schematic is alignment-only; verify current runway use and NOTAMs.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 320 degrees true, 333 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 061256Z.

Evidence & limitations

- METAR source state: ok; observed Sep 6 08:56 ET; retrieved Sep 6 10:11 ET; 75 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- The runway schematic is alignment-only; verify current runway use and NOTAMs.

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 350 degrees true, 004 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KBED METAR 061251Z.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 14 SIGMET records, 35 G-AIRMET records, 3 CWA records. Regional current observations (not corridor forecasts): Mountain: MVFR at KROA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 2 of 2 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sun Sep 6, 10:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Sep 7, 06:00–22:00 ET: IFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/2 d), KBED MVFR (2/2 d), KBFM MVFR (2/2 d), KCRE MVFR (2/2 d), KCRG IFR (2/2 d), KDAB MVFR (2/2 d), KECP VFR (2/2 d), KFIN MVFR (2/2 d), KGKT VFR (2/2 d), KGPT MVFR (2/2 d), KHPN MVFR (2/2 d), KHSA MVFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 28 of 29 destinations report an active NOTAM; 1 destination NOTAM query did not complete. KLZU departure NOTAM state: OK.

4 · Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 52 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 52 of 52 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KGKT, KTRI, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 2 NM, KLZU 53 NM. valid 2026-09-06 11:24Z to 2026-09-06 15:00Z.

- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KECF 59 NM, KNEW 89 NM, KSPG 97 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-06 08:45Z to 2026-09-06 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBED 75 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-06 08:45Z to 2026-09-06 15:00Z.

- 38 of 52 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 14, G-AIRMET 35, CWA 3; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 · New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-06T14:11:57.095236+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 7 of 24 current NOTAMs are new by that baseline — 09/006 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0335/26 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0336/26 (OTHER, last_updated_at 2026-09-03T15:59:00+00:00); 09/008 (OBSTRUCTION, last_updated_at 2026-09-04T03:35:00+00:00); 09/009 (OBSTRUCTION, last_updated_at 2026-09-05T19:15:00+00:00); 09/010 (OBSTRUCTION, last_updated_at 2026-09-05T21:55:00+00:00); 09/011 (OBSTRUCTION, last_updated_at 2026-09-06T02:12:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
