- NWS-hr
- NWS-day
- MAV
- MEX
- GFA
- NOTAM

METAR — issued hourly, highest visibility, wind, and conditions. KLZU observed conditions now, not this trip day.

TAF — The NWS hourly gridpoint forecast for KLZU, updated every 3 hours and reaching about 156 miles. It is the spine of the TAF section on this board. The NWS hourly forecast reaches this day.

NWS hourly gridpoint forecast for KLZU, updated every 3 hours and reaching about 156 miles. It is the spine of the TAF section on this board. The NWS hourly forecast reaches this day.

GFS MOS (MAV) — the GFS model output, updated every 3 hours by the National Weather Service. It carries a three-hour forecast category, so this is the flight category. This period corroborates the forecast.

GFA and Predictions — Forecast surface pressure, wind, and ceiling. This period corroborates the forecast.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

METAR — the routine hourly observation report issued hourly by the National Weather Service (NWS) at the airport. It contains information on current conditions: visibility, wind, temperature, dewpoint, and cloud cover. METARs are issued by the observing office, not a forecast, and describe conditions right now, not this trip day.

NWS hourly gridpoint forecast for the cell containing KLZU, updated every hour and reaching about 156 miles from the airport. It contains by-hour sky, wind and pressure, and it is the spine of the forecast for this board. The NWS hourly forecast reaches this day.

GFS MOS (Model Output Statistics) — the GFS model output statistics, produced by the National Weather Service every day in three-hour cycles. It carries a forecast category, so this board can show the flight category. This board corroborates the forecast.

GFA and TAF — Forecast and Terminal Aerodrome Forecast. Predictions of surface weather conditions are based on pressure, temperature, wind, and visibility. This product is issued by the National Weather Service office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

SHORT TERM

..
(This afternoon through Sunday)
Issued at 230 PM EDT Sat Aug 29 2026

A stalled frontal boundary remains situated over the central Georgia region that has kept many locations under a lower cloud field through the morning. This field has been slow to mix out through the afternoon. With the abundant clouds, expect high temperatures to top out in the mid to upper 80s with gradual warming through the short-term period. Scattered diurnally-driven thunderstorms are expected to continue to develop this afternoon, but coverage will likely be slightly reduced from yesterday due to ongoing cloud cover and drier mid to upper level air working into our CWA. While organized severe weather is not expected today, a few stronger storms will be possible given ample SBCAPE areawide and a tight DCAPE gradient with values ~1200 J/kg over north-northwest Georgia. Additionally, storms that do form will have heavy rainfall potential due to weak steering flow and a favorable low level moisture profile with PWATs in the 1.5-2.0 inch range. The main threat from these storms will be gusty microburst winds, frequent lightning, and heavy rainfall.

As the upper level trough continues to lift northward, our area is coming under greater influence of a broad upper-level ridge currently anchored over the Southern Plains. This ridge will continue to build eastward, reducing cloud cover and gradually increasing our high temperatures over the coming days with Sunday being slightly warmer and drier than today. We can also expect diurnal convection to become less prominent in the week ahead.

LONG TERM

..
(Monday morning through next Friday)
Issued at 230 PM EDT Sat Aug 29 2026

The foremost headline of the coming week will be the building heat as an expansive upper ridge envelops the Southeast. Temperatures will creep upward a degree or two from Monday-Wednesday with highs in the mid 90s commonplace by midweek. Maximum heat index values

will rise hand-in-hand, likely in the 100-105 range for most areas outside of the mountains. In any event, there are no hopes for noticeably cooler air in the near future for those looking for any signs of an end to summer.

As far as rain chances are concerned, PoPs will generally be trending downward as the ridge expands eastward, likely on the order of isolated coverage at best through midweek. With that said, slightly higher coverage of diurnal convection is possible along the southern tier as deeper moisture characterized by PWATS 2+" advects westward within the easterly flow beneath the core of the ridge to the north.

The forecast by the end of the week will then depend to some degree on the track/evolution of the remnant wave of former Tropical Storm Dolly as it pushes westward toward Florida and potentially the Gulf. Ensemble spread (and therefore forecast uncertainty) is high at this extended time frame regarding track or any further development; however, we'll continue to monitor for any potential outcome that could increase moisture and rainfall coverage by the end of forecast period.

Area Forecast Discussion
National Weather Service Peachtree City GA
153 AM EDT Sun Aug 30 2026

...New 06Z Aviation Discussion...

.KEY MESSAGES...

- Scattered thunderstorms are expected today followed by isolated storms on Sunday. A few strong storms capable of producing gusty winds will be possible.
- Locally heavy rainfall from stronger storms may lead to isolated instances of flash flooding.
- Heat will build through the work week with triple digit heat indices returning to much of Georgia.

.SHORT TERM...
(This afternoon through Sunday)
Issued at 230 PM EDT Sat Aug 29 2026

A stalled frontal boundary remains situated over the central Georgia region that has kept many locations under a lower cloud field through the morning. This field has been slow to mix out through the afternoon. With the abundant clouds, expect high temperatures to top out in the mid to upper 80s with gradual warming through the short-term period. Scattered diurnally-driven thunderstorms are expected to continue to develop this afternoon, but coverage will likely be slightly reduced from yesterday due to ongoing cloud cover and drier mid to upper level air working into our CWA. While organized severe weather is not expected today, a few stronger storms will be possible given ample SBCAPE areawide and a tight DCAPE gradient with values ~1200 J/kg over north-northwest Georgia. Additionally, storms that do form will have heavy rainfall potential due to weak steering flow and a favorable low level moisture profile with PWATs in the 1.5-2.0 inch range. The main threat from these storms will be gusty microburst winds, frequent lightning, and heavy rainfall.

As the upper level trough continues to lift northward, our area is coming under greater influence of a broad upper-level ridge currently anchored over the Southern Plains. This ridge will continue to build eastward, reducing cloud cover and gradually increasing our high temperatures over the coming days with Sunday being slightly warmer and drier than today. We can also expect diurnal convection to become less prominent in the week ahead.

&&

.LONG TERM...

(Monday morning through next Friday)

Issued at 230 PM EDT Sat Aug 29 2026

The foremost headline of the coming week will be the building heat as an expansive upper ridge envelops the Southeast. Temperatures will creep upward a degree or two from Monday-Wednesday with highs in the mid 90s commonplace by midweek. Maximum heat index values will rise hand-in-hand, likely in the 100-105 range for most areas outside of the mountains. In any event, there are no hopes for noticeably cooler air in the near future for those looking for any signs of an end to summer.

As far as rain chances are concerned, PoPs will generally be trending downward as the ridge expands eastward, likely on the order of isolated coverage at best through midweek. With that said, slightly higher coverage of diurnal convection is possible along the southern tier as deeper moisture characterized by PWATS 2+" advects westward within the easterly flow beneath the core of the ridge to the north.

The forecast by the end of the week will then depend to some degree on the track/evolution of the remnant wave of former Tropical Storm Dolly as it pushes westward toward Florida and potentially the Gulf. Ensemble spread (and therefore forecast uncertainty) is high at this extended time frame regarding track or any further development; however, we'll continue to monitor for any potential outcome that could increase moisture and rainfall coverage by the end of forecast period.

&&

.AVIATION...

(06Z TAFS)

Issued at 136 AM EDT Sun Aug 30 2026

Conditions are primarily VFR to start the morning. Broken IFR ceilings will be possible between 10-14Z this morning. Scattered LIFR will also be possible underneath at ATL during this time window. Patchy MVFR visibility restrictions will also be possible at MCN in t

- MAV
- MEX
- GFA
- NOTAM

METAR

issued hourly, the highest reported visibility, without regard to forecast conditions. KTRI observations describe current conditions now, not a forecast.

TAF

The National Weather Service issues TAFs four times a day, without proxy, at the airport (state: conditions now, not a forecast).

GFS MAV

the GFS model range is twelve-hour, about a long-range resolution (state: conditions now, not a forecast).

GFS MAV MOS

the GFS model range is twelve-hour, about a long-range resolution (state: conditions now, not a forecast).

GFA

Forecast National surface pressure. This page office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

05/23 (050/230°M · 042/222°T) · 09/27 (090/270°M · 082/262°T) — designators and °M headings are magnetic; °T are true; variation 8°W (NOAA WMM2025)

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 300453Z.

INFO

Facility and verification

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

- GFA
- NOTAM

METAR

issued hourly, highest observed conditions now, and a SPECI report is issued when conditions fall below the minimum for an observation. Issued by the National Weather Service, not a forecast. KROA observations describe current conditions.

TAF

The National Weather Service issues TAFs four times a day, without proxy, and without forecast. (state: conditions now, and a SPECI report is issued when conditions fall below the minimum for an observation. Issued by the National Weather Service, not a forecast. KROA observations describe current conditions.)

GFS MAV

the GFS model provides a long-range forecast of weather conditions. Coarse resolution, but useful for general planning. (state: conditions now, and a SPECI report is issued when conditions fall below the minimum for an observation. Issued by the National Weather Service, not a forecast. KROA observations describe current conditions.)

GFS MOS

the GFS model provides a long-range forecast of weather conditions. Coarse resolution, but useful for general planning. (state: conditions now, and a SPECI report is issued when conditions fall below the minimum for an observation. Issued by the National Weather Service, not a forecast. KROA observations describe current conditions.)

GFA

Forecast National surface pressure. This page office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

06/24 (060/240°M · 051/231°T) · 16/34 (160/340°M · 151/331°T) — designators and °M headings are magnetic; °T are true; variation 9°W (NOAA WMM2025)

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 150 degrees true, 159 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KROA METAR 300454Z.

METAR

issued hourly, the highest reported visibility, without regard to forecast conditions. KGKT observations describe

TAF

highest reported visibility, without regard to forecast conditions. KGKT observations describe

GFS MOS

the GFS model, four times a day, without proxy, calibrated to airport conditions, not

GFS MOS

range of twelve-hour periods, a long label, resolve MOS periods, not

GFA

Forecast National surface pressure, This period office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional

issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf West: category unavailable at KHSA; Long-range: category unavailable at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 300456Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=26, CWA=0; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=937; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day.

METAR

issued hourly, highest observed conditions now, and a SPECI report is issued when there is a significant change in visibility, wind, or other weather conditions. Issued by the National Weather Service, not a forecast. KSSI observed conditions now, and a SPECI report is issued when there is a significant change in visibility, wind, or other weather conditions.

TAF

The National Weather Service issues TAFs for airports with an operational instrument landing system (ILS) and a Class II or Class III terminal area. TAFs are issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. TAFs are valid for up to 25 hours. TAFs are issued for airports with an operational ILS and a Class II or Class III terminal area. TAFs are issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. TAFs are valid for up to 25 hours. TAFs are issued for airports with an operational ILS and a Class II or Class III terminal area.

GFS MAV

The GFS MAV MOS is a forecast of the most likely weather conditions for a given airport. It is issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. The GFS MAV MOS is a forecast of the most likely weather conditions for a given airport. It is issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. The GFS MAV MOS is a forecast of the most likely weather conditions for a given airport.

GFS MOS

The GFS MOS is a forecast of the most likely weather conditions for a given airport. It is issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. The GFS MOS is a forecast of the most likely weather conditions for a given airport. It is issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. The GFS MOS is a forecast of the most likely weather conditions for a given airport.

GFA

The GFA is a forecast of the most likely weather conditions for a given airport. It is issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. The GFA is a forecast of the most likely weather conditions for a given airport. It is issued four times a day, at 06:00, 12:00, 18:00, and 00:00 UTC. The GFA is a forecast of the most likely weather conditions for a given airport.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSSI this run.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

04/22 (040/220°M · 033/213°T) · 16/34 (160/340°M · 153/333°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 020 degrees true, 027 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSSI METAR 300455Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

11/29 (110/290°M · 103/283°T) · 06/24 (060/240°M · 053/233°T) · 18W/36W (180/000°M · 173/353°T · water lane, not wind-favored) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 180 degrees true, 187 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KFIN METAR 300455Z.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional

issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf West: category unavailable at KHSA; Long-range: category unavailable at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 300456Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=26, CWA=0; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=937; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day.

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

18/36 (180/000°M · 171/351°T) — designators and °M headings are magnetic; °T are true; variation 9°W (NOAA WMM2025)

WIND VS RUNWAYS

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 350 degrees true, 359 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 300453Z.

METAR

issued hourly, highest observed conditions now, and a SPECI report is issued when conditions fall below the minimum for an hourly report. METARs are issued by aviation weather observers or automated weather stations. A METAR is not a forecast, it is a report of current conditions. KCRG observations are issued every hour, except during adverse conditions, when they are issued more frequently. A METAR describes current conditions now, not a forecast.

TAF

The National Weather Service issues TAFs for airports with a forecast. TAFs are issued by aviation weather observers or automated weather stations. A TAF is a forecast of conditions expected over a 24-hour period. KCRG TAFs are issued every 6 hours, except during adverse conditions, when they are issued more frequently. A TAF describes conditions expected over the next 24 hours, not a report of current conditions.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS produces a forecast of conditions expected over a 7-day period. KCRG GFS MOSs are issued every 6 hours, except during adverse conditions, when they are issued more frequently. A GFS MOS describes conditions expected over the next 7 days, not a report of current conditions.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS produces a forecast of conditions expected over a 7-day period. KCRG GFS MOSs are issued every 6 hours, except during adverse conditions, when they are issued more frequently. A GFS MOS describes conditions expected over the next 7 days, not a report of current conditions.

GFA

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS produces a forecast of conditions expected over a 7-day period. KCRG GFS MOSs are issued every 6 hours, except during adverse conditions, when they are issued more frequently. A GFS MOS describes conditions expected over the next 7 days, not a report of current conditions.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

14/32 (140/320°M · 133/313°T) · 05/23 (050/230°M · 043/223°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 070 degrees true, 077 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KCRG METAR 300453Z.

INFO

Facility and verification

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional

issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf West: category unavailable at KHSA; Long-range: category unavailable at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 300456Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=26, CWA=0; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=937; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary (FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT)

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day.

METAR

TAF

NOTAM

METAR — issued hourly, includes visibility, wind, clouds, temperature, dew point, altimeter setting, and other relevant information.	TAF — The National Weather Service issues TAFs for major airports, providing a forecast of weather conditions for a specific period, typically 24 hours.	GFS Model — The Global Forecasting System (GFS) is a numerical weather prediction model used by the National Weather Service to generate forecasts.	GFS ensemble — The GFS ensemble provides a range of possible outcomes for a given forecast, reflecting uncertainty in the model.	GFA algorithm — The GFA algorithm is used to predict the likelihood of a specific weather event occurring, based on historical data and model output.	FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KECP this run.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

16/34 (160/340°M · 157/337°T) — designators and °M headings are magnetic; °T are true; variation 3°W (NOAA WMM2025)

WIND VS RUNWAYS

KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 070 degrees true, 073 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. The wind is within five degrees of straight across every runway. Runway designators are painted to the nearest ten degrees, so no end is marked as favoured. Wind source: KECP METAR 300453Z.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

17/35 (170/350°M · 168/348°T) · 08/26 (080/260°M · 078/258°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 080 degrees true, 082 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 300442Z.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

07L/25R (070/250°M · 063/243°T) · 16/34 (160/340°M · 153/333°T) · 07R/25L (070/250°M · 063/243°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 140 degrees true, 147 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KDAB METAR 300453Z.

INFO

Facility and verification

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

FAA WEATHER CONDITIONS

Unavailable — FAA weather timestamp missing or source unavailable

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

04/22 (040/220°M · 034/214°T) · 18/36 (180/000°M · 174/354°T) — designators and °M headings are magnetic; °T are true; variation 6°W (NOAA WMM2025)

WIND VS RUNWAYS

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 070 degrees true, 076 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KTPF METAR 300455Z.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional

issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf West: category unavailable at KHSA; Long-range: category unavailable at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 300456Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=26, CWA=0; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=937; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary (FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT)

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

09/27 (090/270°M · 088/268°T) · 17/35 (170/350°M · 168/348°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 100 degrees true, 102 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJKA METAR 300455Z.

FAA WEATHER CONDITIONS

Unavailable — FAA weather timestamp missing or source unavailable

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

14/32 (140/320°M · 138/318°T) · 18/36 (180/000°M · 178/358°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 080 degrees true, 082 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KBFM METAR 300453Z.

METAR

TAF

NOTAM

METAR — issued hourly, visibility, wind, cloud, etc. Issued by ATIS or by aviation weather service. Not a forecast, but a report of current conditions. KGPT obs describes conditions now, not future.	TAF — highest forecast. The NWS issues TAFs four times a day. FM and TO are without a proxy, but a forecast. A TAF (state: airport) describes conditions now, not future.	GFS Model range forecast. Twelve-hour forecast. Coarse resolution. Numerous labels. Resolve MOS probability.	GFS ensemble forecast. Predictions for National Weather Service surface pressure, etc. This page office and valid time and never interprets them: no category, wind, ceiling, ranking or go/	GFA algorithm. FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

14/32 (140/320°M · 139/319°T) · 18/36 (180/000°M · 179/359°T) — designators and °M headings are magnetic; °T are true; variation 1°W (NOAA WMM2025)

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 050 degrees true, 051 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KGPT METAR 300453Z.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional

issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf West: category unavailable at KHSA; Long-range: category unavailable at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 300456Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=26, CWA=0; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=937; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day.

METAR

issued hourly, highest observed conditions now, and a SPECI report is issued when conditions fall below the minimums for a METAR. Issued by the National Weather Service, not a forecast. KOPF observations describe current conditions.

TAF

The National Weather Service issues TAFs four times a day, without proxy, and without forecast. (state: conditions now, and a SPECI report is issued when conditions fall below the minimums for a METAR. Issued by the National Weather Service, not a forecast. KOPF observations describe current conditions.)

GFS MAV

The National Weather Service issues GFS MAVs four times a day, without proxy, and without forecast. (state: conditions now, and a SPECI report is issued when conditions fall below the minimums for a METAR. Issued by the National Weather Service, not a forecast. KOPF observations describe current conditions.)

GFS MOS

The National Weather Service issues GFS MOSs four times a day, without proxy, and without forecast. (state: conditions now, and a SPECI report is issued when conditions fall below the minimums for a METAR. Issued by the National Weather Service, not a forecast. KOPF observations describe current conditions.)

GFA

The National Weather Service issues GFA forecasts four times a day, without proxy, and without forecast. (state: conditions now, and a SPECI report is issued when conditions fall below the minimums for a METAR. Issued by the National Weather Service, not a forecast. KOPF observations describe current conditions.)

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

09L/27R (090/270°M · 083/263°T) · 12/30 (120/300°M · 113/293°T) · 09R/27L (090/270°M · 083/263°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 090 degrees true, 097 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 09L and 09R. NOTAM-affected runway ends, hatched separately from the wind highlight: 09L, 27R, 09R and 27L. The wind-favoured end 09L and 09R is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KOPF METAR 300453Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-08-30T06:41:21.525431Z.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

16/34 (160/340°M · 147/327°T) · 11/29 (110/290°M · 097/277°T) — designators and °M headings are magnetic; °T are true; variation 13°W (NOAA WMM2025)

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 290 degrees true, 303 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 300456Z.

INFO

Facility and verification

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

SOURCE-QUALIFIED FACILITY DETAILS			
Runway dimensions / surface	UNAVAILABLE	FBO / provider	UNAVAILABLE
Available services	UNAVAILABLE	Frequencies	UNAVAILABLE
Pattern altitude	UNAVAILABLE

- NOTAM

• METAR — issued hourly, with a 30-second delay. It contains the current conditions of the airport, including visibility, wind, clouds, and temperature. It is issued by the FAA and is not a forecast. (state: unavailable); TAF — The National Weather Service (NWS) issues the TAF (Terminal Area Forecast) for each airport. It contains the forecast for the next 24 hours, including visibility, wind, clouds, and temperature. It is issued by the NWS and is not a forecast. (state: unavailable); GFS MAV MOS — The Global Forecast System (GFS) is a numerical weather prediction model. It is used to generate the MAV MOS (Metropolitan Area Forecast) for each airport. It is issued by the NWS and is not a forecast. (state: unavailable); GFS EX — The Global Forecast System (GFS) is a numerical weather prediction model. It is used to generate the EX (Extended) forecast for each airport. It is issued by the NWS and is not a forecast. (state: unavailable); GFA — The Global Forecast System (GFS) is a numerical weather prediction model. It is used to generate the GFA (Global Forecast) for each airport. It is issued by the NWS and is not a forecast. (state: unavailable); FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

11/29 (110/290°M · 096/276°T) · 05/23 (050/230°M · 036/216°T) — designators and °M headings are magnetic; °T are true; variation 14°W (NOAA WMM2025)

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. No usable wind observation for this airport in this run, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: METAR wind unavailable — source state: unavailable.

INFO

Facility and verification

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

SOURCE-QUALIFIED FACILITY DETAILS

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 12 SIGMET records, 26 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KAVL; Gulf West: category unavailable at KHSa; Long-range: category unavailable at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing

- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 • Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 300456Z AUTO . AWC METAR state OK for 28/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=12, G-AIRMET=26, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=937; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

- A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.
- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.
 - Trip window: Fri Aug 28 — Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed. A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
 - Trip-window feasibility evidence (Derived): 2 of 2 active trip days carry a forecast flight category and 0 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. KLZU current observation: VFR — conditions now, not a trip day.
 - 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking. 38 hazard areas retained a coordinate ring this run, 38 of them valid inside the trip window, by the geometric test named below. KLZU: 1 of 18 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 2 of 2 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sun Aug 30, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Aug 31, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/2 d), KBED VFR (2/2 d), KBFM MVFR (2/2 d), KCRE MVFR (2/2 d), KCRG MVFR (2/2 d), KDAB MVFR (2/2 d), KCEP MVFR (2/2 d), KFIN MVFR (2/2 d), KGKT VFR (2/2 d), KGPT MVFR (2/2 d), KHPN MVFR (2/2 d), KHSA MVFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 27 of 29 destinations report an active NOTAM; 2 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 38 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 28 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 38 of 38 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KJZI, KCRE, KMYR, KSSI, KHXD, KLZU, KGKT, KSAV, KTRI, KAVL, KSHD, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 10 NM, KSGJ 34 NM, KFIN 62 NM, KDAB 80 NM, KCEP 90 NM. valid 2026-08-30 04:08Z to 2026-08-30 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KLZU, KSHD, KROA, KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 8 NM, KGKT 24 NM. valid 2026-08-30 04:08Z to 2026-08-30 09:00Z.
- G-AIRMET TANGO — TURB-HI: contains KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 14 NM, KGPT 44 NM, KBFM 45 NM, KNEW 54 NM, KGKT 60 NM, KPNS 63 NM, KJKA 68 NM, KTRI 76 NM, KCEP 87 NM. valid 2026-08-30 02:45Z to 2026-08-30 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KROA 14 NM, KPNS 33 NM, KCEP 38 NM, KLZU 39 NM, KSHD 48 NM, KTRI 50 NM, KJKA 53 NM, KCRE 76 NM, KMYR 76 NM, KBFM 79 NM, KGKT 82 NM, KAVL 92 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-08-30 05:23Z to 2026-08-30 09:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KHPN 62 NM. valid 2026-08-30 05:23Z to 2026-08-30 09:00Z.
- G-AIRMET TANGO — TURB-HI: boundary within 100 NM of KAVL 11 NM, KROA 58 NM, KGKT 63 NM, KTRI 65 NM, KSHD 86 NM, KCRE 99 NM. valid 2026-08-30 02:45Z to 2026-08-30 09:00Z.
- SIGMET 26E — CONVECTIVE: boundary within 100 NM of KOPF 93 NM. valid 2026-08-30 05:55Z to 2026-08-30 07:55Z.
- SIGMET 27E — CONVECTIVE: boundary within 100 NM of KJKA 61 NM, KPNS 72 NM, KBFM 86 NM. valid 2026-08-30 05:55Z to 2026-08-30 07:55Z.
- SIGMET 28E — CONVECTIVE: boundary within 100 NM of KVNC 84 NM. valid 2026-08-30 05:55Z to 2026-08-30 07:55Z.
- 29 of 38 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 12, G-AIRMET 26, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-08-30T06:41:01.863147+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.

- KLZU: 1 of 18 current NOTAMs are new by that baseline — 08/025 (OBSTRUCTION, last_updated_at 2026-08-28T06:28:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
