WPC surface analysis raster chart for F+000 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

NWS surface forecast mentions convection/showers (31% precipitation probability); compare timed periods with TAF and current radar

Runway guidance is approximate wind alignment only; verify ATIS, NOTAMS and actual runway use.

SHORT TERM

..
(Today through Sunday)
Issued at 310 AM EDT Sat Aug 29 2026

A frontal boundary remains stalled to the immediate north of I-85 as the morning begins. Showers and thunderstorms have lingered along the boundary through the overnight and early morning hours, and additional development is forecast to continue for the next few hours. Some stronger storms have been able to tap into deeper moisture and produce rainfall rates in excess of 2 inches per hour and produce localized flooding concerns. With wet soils and ample low level moisture, patchy fog and low cloud ceilings will be possible this morning. Low temperatures will largely range from the upper 60s to low 70s. With upper level troughing moving away to the northeast, there will be little movement in the position of the boundary over the course of the day and thus little change in the overall pattern. Increased cloud cover will once again help limit high temperatures, particularly in central Georgia. Highs today will rise into the mid to upper 80s in central Georgia and upper 80s to low 90s in north Georgia.

Scattered diurnally-driven thunderstorms are expected this afternoon, with the highest chances along and south of the frontal boundary. As the front steadily weakens, there will be little shear, though with SBCAPE between 1500-2500 J/kg and PWATs of 1.6-2 inches, there will be a chance for the development of isolated stronger storms capable of producing gusty microburst winds. Showers and thunderstorms will gradually diminish after sunset with decreasing diurnal instability. The threat for locally heavy rainfall will also warrant continued monitoring, though it will be most likely to the south of the fall line where where soils will be more capable of handling it.

A broad upper level ridge over the Great Plains will begin to approach the eastern CONUS on Sunday. The influence of this ridge will kick off climbing afternoon highs into the early parts of the coming week. It will also help suppress diurnal convection, leading to more isolated storm coverage on Sunday afternoon.

LONG TERM

..
(Sunday night through Friday)
Issued at 310 AM EDT Sat Aug 29 2026

High pressure will slowly build in over the course of the long term. This will continue to decrease chances gradually of afternoon thunderstorms while slowly increasing afternoon high temps and with it heat indices. Temps will return to the mid 90s by the middle of the week with widespread triple digit heat index values along and south of I-85. A heat advisory may be needed for the southern portions of the CWA as early as Monday.

Overnight lows will also be on the rise with the return of the mid 70s to much of the area. This doesn't do much in providing relief from the daytime heat; especially for vulnerable populations. Look after each other, and keep an eye on pets and kids. Stay hydrated if you plan to spend time outside.

Thunderstorm chances during the afternoon will be down to less than 10% for much of the area through the week. As a result, the chances of cooling off with an afternoon thunderstorm decrease with it. Summer is still here and it's planning to stick around for a while.

.KEY MESSAGES...

- Scattered thunderstorms are expected today followed by isolated storms on Sunday. A few strong storms capable of producing gusty winds will be possible.
- Locally heavy rainfall from stronger storms may lead to isolated instances of flash flooding.
- Heat will build through the work week with triple digit heat indices returning to much of Georgia.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 8% · TS12 37% · wind 2 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 12% · wind 5 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 8%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ Outlook sources and technical detail

- **Sat, Aug 29 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sat, Aug 29 · 18:00–00:00 ET:** TAF · 18:00–00:00 ET ET · VFR
- **Sun, Aug 30 · 00:00–06:00 ET:** TAF · 00:00–06:00 ET ET · VFR

- **Sun, Aug 30 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 2% · TS12 17% · wind 2 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 5% · TS12 2% · wind 4 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 17%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

ALL RUNWAYS

05/23 (050/230°M · 042/222°T) · 09/27 (090/270°M · 082/262°T) — designators and °M headings are magnetic; °T are true; variation 8°W (NOAA WMM2025)

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 150 degrees true, 158 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 291653Z.

- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 2% · TS12 5% · wind 4 kt · 73°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 2% · wind 6 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 5%, 12 h precipitation probability 2%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 130 degrees true, 139 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KROA METAR 291654Z.

+ Outlook sources and technical detail

• Sat, Aug 29 · 12:00–18:00 ET: TAF · 12:00–18:00 ET ET · VFR

• Mon, Aug 31 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 3% · wind 1 kt · 69°F; 20:00 ET sky partly cloudy · PoP12 13% · wind 3 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 300 degrees true, 307 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 28. + Outlook sources and technical detail

- **Sat, Aug 29 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sat, Aug 29 · 18:00–00:00 ET:** TAF · 18:00–00:00 ET ET · VFR

- **Sun, Aug 30 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 1% · TS12 7% · wind 2 kt · 68°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 3% · wind 5 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 7%, 12 h precipitation probability 1%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 160 degrees true, 170 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KSHD METAR 291735Z.

- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 35% · TS12 48% · wind 5 kt · 75°F; 20:00 ET sky ovc · PoP12 45% · TS12 23% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 48%, 12 h precipitation probability 35%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 120 degrees true, 127 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 10. Wind source: KSAV METAR 291653Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 33% · TS12 59% · wind 6 kt · 79°F; 20:00 ET sky ovc · PoP12 54% · TS12 25% · wind 11 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 59%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

04/22 (040/220°M · 033/213°T) · 16/34 (160/340°M · 153/333°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind from 070 degrees true, 077 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KSSI METAR 291635Z.

- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 40% · wind 4 kt · 78°F; 20:00 ET sky ovc · PoP12 47% · TS12 28% · wind 6 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

ALL RUNWAYS

09/27 (090/270°M · 082/262°T) · 04/22 (040/220°M · 032/212°T) — designators and °M headings are magnetic; °T are true; variation 8°W (NOAA WMM2025)

WIND VS RUNWAYS

KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 100 degrees true, 108 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJZI METAR 291635Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 40% · TS12 50% · wind 4 kt · 77°F; 20:00 ET sky ovc · PoP12 48% · TS12 28% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 50%, 12 h precipitation probability 40%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KHXD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 170 degrees true, 178 degrees magnetic, at 6 knots gusting 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 21. Wind source: KHXD METAR 291653Z.

- **Sat, Aug 29 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · MVFR
- **Sat, Aug 29 · 18:00–00:00 ET:** TAF · 18:00–00:00 ET ET · MVFR
- **Sun, Aug 30 · 00:00–06:00 ET:** TAF · 00:00–06:00 ET ET · VFR
- **Sun, Aug 30 · 06:00–12:00 ET:** TAF · 06:00–12:00 ET ET · VFR
- **Sun, Aug 30 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 34% · TS12 71% · wind 12 kt · 78°F; 20:00 ET sky ovc · PoP12 61% · TS12 28% · wind 12 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 71%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 040 degrees true, 047 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KSGJ METAR 291656Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 36% · wind 10 kt · 76°F; 20:00 ET sky ovc · PoP12 66% · wind 8 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h precipitation probability 66%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

11/29 (110/290°M · 103/283°T) · 06/24 (060/240°M · 053/233°T) · 18W/36W (180/000°M · 173/353°T · water lane, not wind-favored) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 070 degrees true, 077 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 06. Wind source: KFIN METAR 291650Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 29% · wind 6 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 33% · TS12 20% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 29%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind direction is reported variable at 4 knots, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 291653Z.

[+ Outlook sources and technical detail](#)

- **Sat, Aug 29 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR

- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 29% · wind 6 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 20% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 29%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 130 degrees true, 139 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. The wind is within five degrees of straight across every runway. Runway designators are painted to the nearest ten degrees, so no end is marked as favoured. Wind source: KCRE METAR 291653Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 34% · TS12 67% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 56% · TS12 28% · wind 10 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 67%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KCRG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 05/23. Wind from 110 degrees true, 117 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. - **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · TS12 58% · wind 3 kt · 75°F; 20:00 ET sky ovc · PoP12 48% · TS12 32% · wind 7 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 58%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 42% · wind 5 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 46% · TS12 21% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

ALL RUNWAYS

17/35 (170/350°M · 168/348°T) · 08/26 (080/260°M · 078/258°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 120 degrees true, 122 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 08. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 08 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 291653Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 38% · TS12 75% · wind 10 kt · 79°F; 20:00 ET sky ovc · PoP12 68% · TS12 27% · wind 8 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 75%, 12 h precipitation probability 38%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 070 degrees true, 077 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 07L and 07R. Wind source: KDAB METAR 291653Z.

[+ Outlook sources and technical detail](#)

- **Sat, Aug 29 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · IFR
- **Sat, Aug 29 · 18:00–00:00 ET:** TAF · 18:00–00:00 ET ET · IFR
- **Sun, Aug 30 · 00:00–06:00 ET:** TAF · 00:00–06:00 ET ET · VFR

- **Sun, Aug 30 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 49% · TS12 54% · wind 10 kt · 81°F; 20:00 ET sky ovc · PoP12 58% · TS12 46% · wind 12 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 54%, 12 h precipitation probability 49%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 020 degrees true, 026 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KSPG METAR 291653Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 51% · TS12 65% · wind 6 kt · 80°F; 20:00 ET sky ovc · PoP12 63% · TS12 46% · wind 9 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 65%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 52% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 54% · TS12 44% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 240 degrees true, 246 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The wind-favoured end 22 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 291653Z.

[+ Outlook sources and technical detail](#)

- **Sat, Aug 29 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · IFR
- **Sat, Aug 29 · 18:00–00:00 ET:** TAF · 18:00–00:00 ET ET · IFR
- **Sun, Aug 30 · 00:00–06:00 ET:** TAF · 00:00–06:00 ET ET · VFR
- **Sun, Aug 30 · 06:00–12:00 ET:** TAF · 06:00–12:00 ET ET · VFR
- **Sun, Aug 30 · 12:00–18:00 ET:** TAF · 12:00–18:00 ET ET · VFR
- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 50% · TS12 69% · wind 7 kt · 77°F; 20:00 ET sky ovc · PoP12 54% · TS12 43% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 69%, 12 h precipitation probability 50%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 230 degrees true, 236 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. - **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 25% · TS12 38% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 44% · TS12 18% · wind 6 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 38%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 060 degrees true, 062 degrees magnetic, at 9 knots gusting 15 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KJKA METAR 291659Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 44% · wind 5 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 41% · TS12 15% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 44%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

ALL RUNWAYS

14/32 (140/320°M · 138/318°T) · 18/36 (180/000°M · 178/358°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 100 degrees true, 102 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KBFM METAR 291653Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 51% · wind 9 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 15% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 51%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

ALL RUNWAYS

14/32 (140/320°M · 139/319°T) · 18/36 (180/000°M · 179/359°T) — designators and °M headings are magnetic; °T are true; variation 1°W (NOAA WMM2025)

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 100 degrees true, 101 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KGPT METAR 291653Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · wind 7 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 33% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KHSA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 040 degrees true, 041 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KHSA METAR 291647Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 56% · wind 10 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 47% · TS12 20% · wind 8 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 56%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

18R/36L (180/000°M · 179/359°T) · 18L/36R (180/000°M · 179/359°T) · 09/27 (090/270°M · 089/269°T) — designators and °M headings are magnetic; °T are true; variation 1°W (NOAA WMM2025)

WIND VS RUNWAYS

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 020 degrees true, 021 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 36L and 36R. Wind source: KNEW METAR 291653Z.

- **Sun, Aug 30 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 52% · TS12 75% · wind 6 kt · 81°F; 20:00 ET sky ovc · PoP12 60% · TS12 45% · wind 8 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 75%, 12 h precipitation probability 52%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

WIND VS RUNWAYS

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 150 degrees true, 157 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 12. NOTAM-affected runway ends, hatched separately from the wind highlight: 09L, 27R, 09R and 27L. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KOPF METAR 291642Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 27% · TS12 30% · wind 6 kt · 69°F; 20:00 ET sky ovc · PoP12 13% · TS12 7% · wind 5 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 30%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

16/34 (160/340°M · 147/327°T) · 11/29 (110/290°M · 097/277°T) — designators and °M headings are magnetic; °T are true; variation 13°W (NOAA WMM2025)

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 300 degrees true, 313 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 291656Z.

- **Mon, Aug 31 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 17% · TS12 11% · wind 9 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 2% · TS12 4% · wind 7 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 11%, 12 h precipitation probability 17%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

11/29 (110/290°M · 096/276°T) · 05/23 (050/230°M · 036/216°T) — designators and °M headings are magnetic; °T are true; variation 14°W (NOAA WMM2025)

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 300 degrees true, 314 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The wind-favoured end 29 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 291651Z.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 15 SIGMET records, 26 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV, KHXD; Gulf East: MVFR at KECP, KPNS.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary (DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED)

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Aug 29, 10:00–22:00 ET: MVFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Aug 30, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- Mon Aug 31, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL MVFR (2/3 d), KBED VFR (2/3 d), KBFM MVFR (2/3 d), KCRE MVFR (2/3 d), KCRG MVFR (2/3 d), KDAB VFR (2/3 d), KECP MVFR (2/3 d), KFIN VFR (2/3 d), KGKT VFR (2/3 d), KGPT MVFR (2/3 d), KHPN VFR (2/3 d), KHSA MVFR (2/3 d); 17 further airports in section 2.
- NOTAMs: 27 of 29 destinations report an active NOTAM; 2 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 42 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 42 of 42 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — MT_OBSC: contains KLZU, KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KGKT 32 NM, KTRI 33 NM, KROA 89 NM. valid 2026-08-29 18:08Z to 2026-08-29 21:00Z.
- G-AIRMET TANGO — TURB-HI: contains KPNS, KBED, KHPN, KROA, KLZU, KAVL, KSHD, KTRI, KGKT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KECP 6 NM, KBFM 16 NM, KJKA 17 NM, KGPT 61 NM, KHSA 76 NM, KSAV 98 NM. valid 2026-08-29 16:36Z to 2026-08-29 21:00Z.
- SIGMET 78C — CONVECTIVE: contains KPNS (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KJKA 3 NM, KBFM 30 NM, KGPT 49 NM, KECP 62 NM, KHSA 64 NM, KNEW 79 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- SIGMET 01E — CONVECTIVE: contains KDAB, KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KFIN 7 NM, KSGJ 20 NM, KCRG 33 NM, KVNC 41 NM, KSSI 45 NM, KSRQ 52 NM, KTPF 52 NM, KSPG 60 NM, KHXD 88 NM, KSAV 93 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- SIGMET 03E — CONVECTIVE: contains KECP (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KPNS 11 NM, KJKA 34 NM, KSPG 53 NM, KTPF 56 NM, KBFM 57 NM, KSRQ 69 NM, KVNC 86 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- SIGMET 04E — CONVECTIVE: contains KAVL, KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KGKT 1 NM, KTRI 20 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- SIGMET 05E — CONVECTIVE: contains KSSI, KJZI, KSAV, KHXD (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 40 NM, KSGJ 63 NM, KMYR 74 NM, KCRE 88 NM, KFIN 94 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KBFM 4 NM, KJKA 22 NM, KLZU 26 NM, KGKT 36 NM, KPNS 41 NM, KGPT 49 NM, KHSA 66 NM, KAVL 72 NM, KNEW 87 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-08-29 14:45Z to 2026-08-29 21:00Z.
- SIGMET 99E — CONVECTIVE: boundary within 100 NM of KCRE 1 NM, KMYR 14 NM, KROA 45 NM, KJZI 90 NM, KSHD 95 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- SIGMET 02E — CONVECTIVE: boundary within 100 NM of KOPF 34 NM, KVNC 43 NM, KSRQ 64 NM, KSPG 85 NM, KTPF 90 NM. valid 2026-08-29 17:55Z to 2026-08-29 19:55Z.
- 32 of 42 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 15, G-AIRMET 26, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-08-29T18:31:39.224628+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 1 of 18 current NOTAMs are new by that baseline — 08/025 (OBSTRUCTION, last_updated_at 2026-08-28T06:28:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
