- GFA
- NOTAM

METAR — issued hourly, highest SPECI reports, visibility, wind, etc. Issued by NWS, not a forecast. KLZU observations describe conditions now, not this trip day.

TAF — The National Weather Service digital forecast cell containing KLZU, updated every 6 hours and reaching about 156 miles. TAFs are by-hour sky, wind and pressure, and it is the spine of the trip. The STRIP page covers part of this day.

NWS hourly gridpoint forecast for the GFS model, issued by the National Weather Service every three hours. It carries a forecast category, so this is the flight category. The flight category corroborates the forecast.

GFS MOS (Model Output Statistics) — the GFS model output, issued by the National Weather Service every three hours. It carries a forecast category, so this is the flight category. The flight category corroborates the forecast.

GFA and Forecast Predictions — National surface pressure, wind, etc. This page office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — issued hourly, highest visibility, wind, and pressure. Issued by the National Weather Service (NWS) not a forecast, but a report of current conditions at KLZU observed at the time of the report.

TAF — The National Weather Service (NWS) issues a TAF for each airport in the United States. The TAF is a forecast of the weather conditions at the airport for the next 24 hours. The TAF is issued by the NWS and is the spine of the forecast. The TAF is issued by the NWS and is the spine of the forecast.

NWS hourly gridpoint forecast for the cell containing KLZU, updated every hour and reaching about 156 miles. The NWS hourly gridpoint forecast is the spine of the forecast. The NWS hourly gridpoint forecast is the spine of the forecast.

GFS MOS (Model Output Statistics) — the GFS model output statistics (MOS) are a forecast of the weather conditions at the airport for the next 24 hours. The GFS MOS is issued by the NWS and is the spine of the forecast. The GFS MOS is issued by the NWS and is the spine of the forecast.

GFA (Global Forecast for Aviation) — Forecast of the weather conditions at the airport for the next 24 hours. The GFA is issued by the NWS and is the spine of the forecast. The GFA is issued by the NWS and is the spine of the forecast.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this morning. This page is not a forecast, but a report of current conditions at KLZU observed at the time of the report.

SHORT TERM

..
(This afternoon through Sunday)
Issued at 230 PM EDT Sat Aug 29 2026

A stalled frontal boundary remains situated over the central Georgia region that has kept many locations under a lower cloud field through the morning. This field has been slow to mix out through the afternoon. With the abundant clouds, expect high temperatures to top out in the mid to upper 80s with gradual warming through the short-term period. Scattered diurnally-driven thunderstorms are expected to continue to develop this afternoon, but coverage will likely be slightly reduced from yesterday due to ongoing cloud cover and drier mid to upper level air working into our CWA. While organized severe weather is not expected today, a few stronger storms will be possible given ample SBCAPE areawide and a tight DCAPE gradient with values ~1200 J/kg over north-northwest Georgia. Additionally, storms that do form will have heavy rainfall potential due to weak steering flow and a favorable low level moisture profile with PWATs in the 1.5-2.0 inch range. The main threat from these storms will be gusty microburst winds, frequent lightning, and heavy rainfall.

As the upper level trough continues to lift northward, our area is coming under greater influence of a broad upper-level ridge currently anchored over the Southern Plains. This ridge will continue to build eastward, reducing cloud cover and gradually increasing our high temperatures over the coming days with Sunday being slightly warmer and drier than today. We can also expect diurnal convection to become less prominent in the week ahead.

LONG TERM

..
(Monday morning through next Friday)
Issued at 230 PM EDT Sat Aug 29 2026

The foremost headline of the coming week will be the building heat as an expansive upper ridge envelops the Southeast. Temperatures will creep upward a degree or two from Monday-Wednesday with highs in the mid 90s commonplace by midweek. Maximum heat index values

will rise hand-in-hand, likely in the 100-105 range for most areas outside of the mountains. In any event, there are no hopes for noticeably cooler air in the near future for those looking for any signs of an end to summer.

As far as rain chances are concerned, PoPs will generally be trending downward as the ridge expands eastward, likely on the order of isolated coverage at best through midweek. With that said, slightly higher coverage of diurnal convection is possible along the southern tier as deeper moisture characterized by PWATS 2+" advects westward within the easterly flow beneath the core of the ridge to the north.

The forecast by the end of the week will then depend to some degree on the track/evolution of the remnant wave of former Tropical Storm Dolly as it pushes westward toward Florida and potentially the Gulf. Ensemble spread (and therefore forecast uncertainty) is high at this extended time frame regarding track or any further development; however, we'll continue to monitor for any potential outcome that could increase moisture and rainfall coverage by the end of forecast period.

...New 00Z Aviation Discussion...

.KEY MESSAGES...

- Scattered thunderstorms are expected today followed by isolated storms on Sunday. A few strong storms capable of producing gusty winds will be possible.
- Locally heavy rainfall from stronger storms may lead to isolated instances of flash flooding.
- Heat will build through the work week with triple digit heat indices returning to much of Georgia.

This p office run. them: no category, wind, ceiling, tanking or go

category. NOTAMs were read for KTRI this

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR at KSAV.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

05/23 (050/230°M · 042/222°T) · 09/27 (090/270°M · 082/262°T) — designators and °M headings are magnetic; °T are true; variation 8°W (NOAA WMM2025)

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 120 degrees true, 128 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 292253Z.

3

condition: KROA ob describes

fault. (state

calibra airport

resolv MOS (state

This p office

category. NOTAMs were read for KROA this run.

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, but only when conditions are not forecast. It includes current conditions, visibility, wind, and other relevant information. It is issued by the FAA and is used by pilots to plan their flights. It is not a forecast, but a report of current conditions. KROA obs describes conditions now, not a forecast.

TAF

highest forecasted conditions for the next 24 hours. The NWS issues TAFs four times a day, at 00, 06, 12, and 18 UTC. It includes forecasted conditions, visibility, wind, and other relevant information. It is issued by the FAA and is used by pilots to plan their flights. It is a forecast, not a report of current conditions. KROA obs (state: airport) describes conditions now, not a forecast.

GFS M

the GFS model provides a long-range forecast of weather conditions. It is used by the NWS to issue TAFs and other weather forecasts. It is a numerical weather prediction model that takes into account a wide range of factors, including temperature, pressure, and humidity. It is used by the FAA and is used by pilots to plan their flights. It is a forecast, not a report of current conditions. KROA obs (state: airport) describes conditions now, not a forecast.

GFS e

range of weather conditions. It is used by the NWS to issue TAFs and other weather forecasts. It is a numerical weather prediction model that takes into account a wide range of factors, including temperature, pressure, and humidity. It is used by the FAA and is used by pilots to plan their flights. It is a forecast, not a report of current conditions. KROA obs (state: airport) describes conditions now, not a forecast.

GFA a

Forecasted conditions for the next 24 hours. The NWS issues GFA forecasts four times a day, at 00, 06, 12, and 18 UTC. It includes forecasted conditions, visibility, wind, and other relevant information. It is issued by the FAA and is used by pilots to plan their flights. It is a forecast, not a report of current conditions. KROA obs (state: airport) describes conditions now, not a forecast.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KROA this run.

not a forecast condition. KGKT observed describes

proxy fault. (state of its own, so a normal condition, the

resolved calibration airport MOS (state: them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

labelled resolved MOS (state: them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

press. This p office and valid time and never interprets

category. NOTAMs were read for KGKT this run.

Unfiltered Hazard Feeds: 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feeds. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

GFA

NOTAM

METAR

issued hourly, but only when conditions are not forecast. METARs are issued by aviation weather stations, not a forecast. METARs describe current conditions at the time of observation. KGKT observations are issued every hour, but only when conditions are not forecast. METARs describe current conditions at the time of observation.

TAF

highest forecast visibility. The National Weather Service issues TAFs every six hours, but only when conditions are not forecast. TAFs describe forecast conditions at the time of observation.

GFS MOS

the GFS model output. The GFS model output is used to generate the GFS MOS. The GFS MOS is a forecast of the weather conditions at the time of observation.

GFS MOS

the GFS model output. The GFS model output is used to generate the GFS MOS. The GFS MOS is a forecast of the weather conditions at the time of observation.

GFA

Forecast of the weather conditions at the time of observation. The GFA is a forecast of the weather conditions at the time of observation.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

10/28 (100/280°M · 093/273°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 180 degrees true, 187 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. The wind is within five degrees of straight across every runway. Runway designators are painted to the nearest ten degrees, so no end is marked as favoured. Wind source: KGKT METAR 292236Z.

This p office run.

category. NOTAMs were read for KSHD this

Unfiltered hazard feeds (not route-filtered): LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

Issued by FM a about numer surface advisory evidence about the airport, not by aviatric witho and vi a long are ra weather, and they never change a flight not a fore proxy resolv labelle press category. NOTAMs were read for KSAV this condition fault. calibra resolv This p run. KSAV ob (state airpor MOS office and valid time and never interprets them: no category, wind, ceiling, ranking or go/ describes conditions now (state: them: no category, wind, ceiling, ranking or go/ no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/

Scope: Hazard counts are raw feeds. No proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

CURRENT WIND (FAA)

Unavailable

FAA WEATHER CONDITIONS

Unavailable — FAA weather timestamp missing or source unavailable

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

10/28 (100/280°M · 093/273°T) · 01/19 (010/190°M · 003/183°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 030 degrees true, 037 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. Wind source: KSAV METAR 292224Z.

condition fault. calibra resolv
KSSI obs (state airport MOS
describes conditions now (state: this p
office (state: RATE_LIMITED), so the NOTAM list is
unknown rather than empty.
them: no category, wind, ceiling, tanking or go/
no-go here is derived from an image. A
published WPC surface chart matches this
period and is shown in the dropdown with its
issuing office and valid time. It is displayed,
never interpreted.

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR at KFTW.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. The METAR includes information on current weather conditions, such as visibility, wind, clouds, and temperature. It is issued by the National Weather Service (NWS) and is used by pilots to make decisions about flight safety.

TAF

The TAF (Terminal Area Forecast) provides a forecast of weather conditions for a specific terminal area. It is issued by the NWS and is used by pilots to plan their flights. The TAF includes information on expected weather conditions, such as visibility, wind, clouds, and temperature, for a specific period of time.

GFS MOS

The GFS MOS (Global Forecast System Model Output Statistics) is a forecast of weather conditions for a specific area. It is issued by the NWS and is used by pilots to plan their flights. The GFS MOS includes information on expected weather conditions, such as visibility, wind, clouds, and temperature, for a specific period of time.

GFS e

The GFS e (Global Forecast System Model Output Statistics) is a forecast of weather conditions for a specific area. It is issued by the NWS and is used by pilots to plan their flights. The GFS e includes information on expected weather conditions, such as visibility, wind, clouds, and temperature, for a specific period of time.

GFA a

The GFA a (Global Forecast System Model Output Statistics) is a forecast of weather conditions for a specific area. It is issued by the NWS and is used by pilots to plan their flights. The GFA a includes information on expected weather conditions, such as visibility, wind, clouds, and temperature, for a specific period of time.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

condition: KJZI obs describes

fault. (state: conditions now

calibra airport MOS (state: MOS

resolv MOS (state: MOS

This p office them: no category, wind, ceiling, tanking or go

(state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.

NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

NOTAM

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued on a 15-minute cycle. The METAR is issued by the National Weather Service (NWS) and is used by pilots to determine if they can fly. METARs are issued by the NWS and are used by pilots to determine if they can fly. METARs are issued by the NWS and are used by pilots to determine if they can fly.

TAF

The TAF (Terminal Area Forecast) is a forecast of the weather conditions at a specific airport. It is issued by the NWS and is used by pilots to determine if they can fly. The TAF is issued by the NWS and is used by pilots to determine if they can fly. The TAF is issued by the NWS and is used by pilots to determine if they can fly.

GFS MOS

The GFS MOS (Global Forecast System Model Output Statistics) is a forecast of the weather conditions at a specific airport. It is issued by the NWS and is used by pilots to determine if they can fly. The GFS MOS is issued by the NWS and is used by pilots to determine if they can fly. The GFS MOS is issued by the NWS and is used by pilots to determine if they can fly.

GFS EX

The GFS EX (Global Forecast System Model Output Statistics) is a forecast of the weather conditions at a specific airport. It is issued by the NWS and is used by pilots to determine if they can fly. The GFS EX is issued by the NWS and is used by pilots to determine if they can fly. The GFS EX is issued by the NWS and is used by pilots to determine if they can fly.

GFA

The GFA (Global Forecast System Model Output Statistics) is a forecast of the weather conditions at a specific airport. It is issued by the NWS and is used by pilots to determine if they can fly. The GFA is issued by the NWS and is used by pilots to determine if they can fly. The GFA is issued by the NWS and is used by pilots to determine if they can fly.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

not a forecast condition. KHXD observes a normal condition, the

proxy fault. (state of its own, so

resolved. calibrates airport MOS (state

labelled. resolved MOS (state

press. This p

category. NOTAMs were read for KHXD this run.

Unfiltered Hazard Feeds: 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feeds. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

condition KSGJ ob describes

fault. (state

calibra airport

resolv MOS (state

This p office

category. NOTAMs were read for KSGJ this run.

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued for visibility, wind, clouds, and other weather conditions. METARs are issued by the FAA and are not a forecast. METARs are issued for KSGJ only. METARs describe conditions now, not future conditions.

TAF

highest forecasted conditions for the next 24 hours. TAFs are issued by the FAA and are not a forecast. TAFs describe conditions now, not future conditions.

GFS MOS

the GFS MOS is a forecast of the weather conditions for the next 24 hours. The GFS MOS is issued by the FAA and is not a forecast. The GFS MOS describes conditions now, not future conditions.

GFS MOS

range of weather conditions for the next 24 hours. The GFS MOS is issued by the FAA and is not a forecast. The GFS MOS describes conditions now, not future conditions.

GFA

Forecast of weather conditions for the next 24 hours. The GFA is issued by the FAA and is not a forecast. The GFA describes conditions now, not future conditions.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSGJ this run.

ALL RUNWAYS

13/31 (130/310°M · 123/303°T) · 06/24 (060/240°M · 053/233°T) · 02/20 (020/200°M · 013/193°T) · 17W/35W (170/350°M · 163/343°T · water lane, not wind-favored) · 18W/36W (180/000°M · 173/353°T · water lane, not wind-favored) · 12W/30W (120/300°M · 113/293°T · water lane, not wind-favored) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 090 degrees true, 097 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KSGJ METAR 292256Z.

KFIN obs (state airpor MOS office run.

describes of its own, so (state: them: no category, wind, ceiling, tanking or go-

a normal condition, the no-go here is derived from an image. A

Unfiltered hazard feeds (not route filtered) LIFR at KSPG; Gulf West: MVFR

G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

11/29 (110/290°M · 103/283°T) · 06/24 (060/240°M · 053/233°T) · 18W/36W (180/000°M · 173/353°T · water lane, not wind-favored) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 130 degrees true, 137 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. Wind source: KFIN METAR 292250Z.

3 ·

Issued by FM a about numer surface advisory evidence about the airport, not by aviatric witho and vi a long are ra weather, and they never change a flight not a fore proxy resolv labelle press category. The NOTAM query failed this run condition fault. calibra resolv This p (state: RATE_LIMITED), so the NOTAM list is KMYR of (state: airport MOS office unknown rather than empty. describes conditions now (state: them: no category, wind, ceiling, tanking or go no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment. NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Scope: Hazard counts are raw feeds from the FAA, not a route assessment. Not a go/no-go call, not a recommendation, and not a flight category. Airport flight categories are current point observations, not corridor forecasts.

KLZU MET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment. Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. It includes the current weather, visibility, wind, and other relevant information. It is issued by the National Weather Service (NWS) and is used by pilots to plan their flights.

TAF

The TAF (Terminal Area Forecast) provides a forecast of the weather conditions for a specific terminal area. It is issued by the NWS and is used by pilots to plan their flights. The TAF includes information about the expected weather conditions, including wind, visibility, and clouds.

GFS MOS

The GFS MOS (Global Forecast System Model Output Statistics) provides a forecast of the weather conditions for a specific terminal area. It is issued by the NWS and is used by pilots to plan their flights. The MOS includes information about the expected weather conditions, including wind, visibility, and clouds.

GFS e

The GFS e (Global Forecast System Model Output Statistics) provides a forecast of the weather conditions for a specific terminal area. It is issued by the NWS and is used by pilots to plan their flights. The MOS includes information about the expected weather conditions, including wind, visibility, and clouds.

GFA a

The GFA a (Global Forecast System Model Output Statistics) provides a forecast of the weather conditions for a specific terminal area. It is issued by the NWS and is used by pilots to plan their flights. The MOS includes information about the expected weather conditions, including wind, visibility, and clouds.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

3 ·

not a forecast condition. KCRE observed describes

proxy fault. (state of its own, so a normal condition, the

resolved calibration. MOS (state: them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

press. This p office and valid time and never interprets

category. NOTAMs were read for KCRE this run.

Unfiltered Hazard Feeds: 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feeds. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, except on days when the highest visibility is forecast to be less than 3 miles. The METAR is issued by the FAA and is not a forecast. It describes the current conditions at the airport.

TAF

The TAF is issued by the FAA and is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC. The TAF is issued by the FAA and is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC.

GFS M

The GFS M is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC. The GFS M is issued by the FAA and is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC.

GFS e

The GFS e is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC. The GFS e is issued by the FAA and is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC.

GFA a

The GFA a is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC. The GFA a is issued by the FAA and is a forecast of the conditions at the airport for the next 24 hours. It is issued four times a day, at 00:00, 06:00, 12:00, and 18:00 UTC.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRE this run.

category. NOTAMs were read for KCRG this
run.
and valid time and never interprets
category, wind, ceiling, ranking or go/
no-go here is derived from an image. A
published WPC surface chart matches this
period and is shown in the dropdown with its
issuing office and valid time. It is displayed,
never interpreted.

Unfiltered hazard feeds (not route-filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR at KSAV.

Scope: Hazard counts are raw feeds. Not a route assessment. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued for visibility, wind, clouds, and other weather conditions. METARs are issued by the FAA and are not a forecast. METARs are issued for KCRG only. METARs describe conditions now, not future conditions.

TAF

highest forecasted ceiling, visibility, and wind. TAFs are issued by the FAA and are not a forecast. TAFs are issued for KCRG only. TAFs describe conditions now, not future conditions.

GFS MOS

the GFS MOS is a forecast of the weather conditions at KCRG. It is issued by the FAA and is not a forecast. It is issued for KCRG only. It describes conditions now, not future conditions.

GFS MOS

the GFS MOS is a forecast of the weather conditions at KCRG. It is issued by the FAA and is not a forecast. It is issued for KCRG only. It describes conditions now, not future conditions.

GFA

Forecast of the weather conditions at KCRG. It is issued by the FAA and is not a forecast. It is issued for KCRG only. It describes conditions now, not future conditions.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment. NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Scope: Hazard counts are raw feeds. NOTAMs are current point observations, not corridor forecasts. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment. Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

3

condition: KPNS ob describes

fault: (state

calibra: airport

resolv: MOS (state

This p office

category. NOTAMs were read for KPNS this run.

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, but only when conditions are not forecast. Issued by the FAA, not a forecast. KPNS obs describes conditions now, not future.

TAF

highest forecast visibility, wind, and other conditions. The NWS issues TAFs four times a day, without proxy, fault. A (state: airport)

GFS MOS

the GFS model's forecast of weather conditions twelve hours out. Coarse resolution, a long lead time, and no proxy, fault. A (state: airport)

GFS MOS

the GFS model's forecast of weather conditions twelve hours out. Coarse resolution, a long lead time, and no proxy, fault. A (state: airport)

GFA

Forecast of weather conditions twelve hours out. Coarse resolution, a long lead time, and no proxy, fault. A (state: airport)

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

17/35 (170/350°M · 168/348°T) · 08/26 (080/260°M · 078/258°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 130 degrees true, 132 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 292253Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

2026-08-30T00:20:36.066613Z.

 - Extended outlook and hazard-feed states are reported in the source stamp.
 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

not a forecast condition. KDAB observes conditions now.

proxy fault. (state: conditions now)

resolved. calibrated. (airport MOS (state: them: no category, wind, ceiling, tanking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

press. This page office category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

Unfiltered hazard feeds (not route-filtered): 0 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feeds. Not a route assessment. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued at least every 30 minutes when conditions are changing rapidly. METARs are issued at least every 30 minutes when conditions are changing rapidly.

TAF

The TAF is a forecast of the weather conditions at an airport for a specific period of time. The TAF is a forecast of the weather conditions at an airport for a specific period of time.

GFS MOS

The GFS MOS is a forecast of the weather conditions at an airport for a specific period of time. The GFS MOS is a forecast of the weather conditions at an airport for a specific period of time.

GFS MOS

The GFS MOS is a forecast of the weather conditions at an airport for a specific period of time. The GFS MOS is a forecast of the weather conditions at an airport for a specific period of time.

GFA

The GFA is a forecast of the weather conditions at an airport for a specific period of time. The GFA is a forecast of the weather conditions at an airport for a specific period of time.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

3 ·

not a forecast condition. KSPG observes a normal condition, the

proxy fault. (state of its own, so

resolved. calibrates airport MOS (state

labelled. resolved MOS (state

press. This p

category. NOTAMs were read for KSPG this run.

Unfiltered Hazard Feeds: 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feeds. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued for visibility, wind, clouds, and other weather conditions. KSPG observations are issued every hour, and are used to generate the TAF. KSPG observations are not a forecast, but a description of current conditions.

TAF

The TAF is a forecast of weather conditions for a specific location, issued every six hours. The TAF is a forecast of weather conditions for a specific location, issued every six hours. The TAF is a forecast of weather conditions for a specific location, issued every six hours.

GFS MOS

The GFS MOS is a forecast of weather conditions for a specific location, issued every six hours. The GFS MOS is a forecast of weather conditions for a specific location, issued every six hours. The GFS MOS is a forecast of weather conditions for a specific location, issued every six hours.

GFS MOS

The GFS MOS is a forecast of weather conditions for a specific location, issued every six hours. The GFS MOS is a forecast of weather conditions for a specific location, issued every six hours. The GFS MOS is a forecast of weather conditions for a specific location, issued every six hours.

GFA

The GFA is a forecast of weather conditions for a specific location, issued every six hours. The GFA is a forecast of weather conditions for a specific location, issued every six hours. The GFA is a forecast of weather conditions for a specific location, issued every six hours.

NOTAM

NOTAMs are notices to airmen, issued by the FAA, that provide information about potential hazards to flight. NOTAMs are issued for a variety of reasons, including construction, obstructions, and other hazards. NOTAMs are issued for a variety of reasons, including construction, obstructions, and other hazards.

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

07/25 (070/250°M · 064/244°T) · 18/36 (180/000°M · 174/354°T) — designators and °M headings are magnetic; °T are true; variation 6°W (NOAA WMM2025)

WIND VS RUNWAYS

KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 150 degrees true, 156 degrees magnetic, at 14 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 292221Z.

not a forecast condition. KTPF observes a normal condition, the

proxy fault. (state of its own, so

resolved. calibrated airport MOS (state

labelled. resolved MOS (state

press. This p

category. NOTAMs were read for KTPF this run.

Unfiltered Hazard Feeds: 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feeds. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

- METAR

TAF

MAV

MEX

GFA

NOTAM

METAR

issued hourly. The METAR is issued hourly, with a maximum of 12 hours between updates. The METAR is issued by the FAA, and is not a forecast. It describes the current conditions at the airport.

TAF

highest forecasted ceiling. The TAF is issued by the FAA, and is not a forecast. It describes the forecasted conditions at the airport.

GFS MOS

the GFS MOS is a forecast of the weather conditions at the airport. It is issued by the FAA, and is not a forecast. It describes the forecasted conditions at the airport.

GFS MOS

range of the GFS MOS is a forecast of the weather conditions at the airport. It is issued by the FAA, and is not a forecast. It describes the forecasted conditions at the airport.

GFA

Forecast of the weather conditions at the airport. It is issued by the FAA, and is not a forecast. It describes the forecasted conditions at the airport.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTPF this run.

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

04/22 (040/220°M · 034/214°T) · 18/36 (180/000°M · 174/354°T) — designators and °M headings are magnetic; °T are true; variation 6°W (NOAA WMM2025)

WIND VS RUNWAYS

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 140 degrees true, 146 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KTPF METAR 292235Z.

not a forecast condition. KSRQ observes (state: describes conditions now proxy fault. (state: conditions now resolved. calibrated. airport MOS (state: them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted. press. This period run. category. NOTAMs were read for KSRQ this office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route-filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR at KSRQ.

Scope: Hazard counts are raw feeds. Not a route assessment. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 • Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 • ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 • Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, but only when conditions are not forecast. The METAR is issued by the FAA's National Weather Service (NWS) office for the airport. It describes current conditions at the airport.

TAF

highest forecasted conditions for the next 24 hours. The TAF is issued by the FAA's National Weather Service (NWS) office for the airport. It describes forecasted conditions at the airport.

GFS MOS

the GFS MOS is a forecast of the weather conditions at the airport. It is issued by the FAA's National Weather Service (NWS) office for the airport. It describes forecasted conditions at the airport.

GFS MOS

range of forecasted conditions for the next 24 hours. The GFS MOS is issued by the FAA's National Weather Service (NWS) office for the airport. It describes forecasted conditions at the airport.

GFA

Forecasted conditions for the next 24 hours. The GFA is issued by the FAA's National Weather Service (NWS) office for the airport. It describes forecasted conditions at the airport.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSRQ this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

14/32 (140/320°M · 134/314°T) · 04/22 (040/220°M · 034/214°T) — designators and °M headings are magnetic; °T are true; variation 6°W (NOAA WMM2025)

WIND VS RUNWAYS

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 020 degrees true, 026 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. NOTAM-affected runway ends, hatched separately from the wind highlight: 04 and 22. The wind-favoured end 04 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KSRQ METAR 292232Z.

INFO

Facility and verification

Unsupported facility fields remain explicit until a reviewed, source-qualified feed is connected.

 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 ·

not a forecast condition. KVNC observation describes

proxy fault. (state of its own, so a normal condition, the

resolved calibration airport MOS (state: them: no category, wind, ceiling, tanking or go

labelled resolved MOS (state: no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

press. This p office

category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

Unfiltered Hazard

LIFR at KSPG; Gulf West: MVFR

G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/

Scope: Hazard counts are raw feeds

proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if needed. The METAR includes information on current weather conditions, such as visibility, wind, clouds, and temperature. It is issued by the National Weather Service (NWS) and is used by pilots to make decisions about flight. The METAR for KVNC observed at 00:00:00 ET on Sunday, August 30, 2025, is: TAF · VFR. This indicates that the weather is VFR (Visual Flight Rules) and that there are no significant weather conditions that would require a change to IFR (Instrument Flight Rules).

TAF

highest of the forecast. The TAF includes information on the highest of the forecast, such as visibility, wind, clouds, and temperature. It is issued by the National Weather Service (NWS) and is used by pilots to make decisions about flight. The TAF for KVNC observed at 00:00:00 ET on Sunday, August 30, 2025, is: TAF · VFR. This indicates that the weather is VFR (Visual Flight Rules) and that there are no significant weather conditions that would require a change to IFR (Instrument Flight Rules).

GFS MOS

the GFS MOS (Global Forecast of Surface Meteorological Observations) is a model output that provides a forecast of the weather conditions at a specific location. It is used by pilots to make decisions about flight. The GFS MOS for KVNC observed at 00:00:00 ET on Sunday, August 30, 2025, is: GFS MAV MOS · VFR. This indicates that the weather is VFR (Visual Flight Rules) and that there are no significant weather conditions that would require a change to IFR (Instrument Flight Rules).

GFS ex

range of the GFS ex (Global Forecast of Surface Meteorological Observations) is a model output that provides a forecast of the weather conditions at a specific location. It is used by pilots to make decisions about flight. The GFS ex for KVNC observed at 00:00:00 ET on Sunday, August 30, 2025, is: GFS MAV MOS · VFR. This indicates that the weather is VFR (Visual Flight Rules) and that there are no significant weather conditions that would require a change to IFR (Instrument Flight Rules).

GFA a

Forecast of the GFA a (Global Forecast of Surface Meteorological Observations) is a model output that provides a forecast of the weather conditions at a specific location. It is used by pilots to make decisions about flight. The GFA a for KVNC observed at 00:00:00 ET on Sunday, August 30, 2025, is: GFS MAV MOS · VFR. This indicates that the weather is VFR (Visual Flight Rules) and that there are no significant weather conditions that would require a change to IFR (Instrument Flight Rules).

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

13/31 (130/310°M · 124/304°T) · 05/23 (050/230°M · 044/224°T) — designators and °M headings are magnetic; °T are true; variation 6°W (NOAA WMM2025)

WIND VS RUNWAYS

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 020 degrees true, 026 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 292235Z.

Issued by FM a about numer surface advisory evidence about the airport, not by aviatric witho and vi a long are ra weather, and they never change a flight not a fore proxy resolv labelle press category. The NOTAM query failed this run condition fault. calibra resolv This p (state: RATE_LIMITED), so the NOTAM list is KJKA obs (state: airport MOS office unknown rather than empty. describes conditions now (state: them: no category, wind, ceiling, tanking or go no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment. NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Scope: Hazard counts are raw feeds from the FAA, not a route assessment. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

- METAR

TAF

MAV

MEX

GFA

NOTAM

METAR

issued hourly, or as needed for SPECI requests. It includes current visibility, wind, cloud, and other weather data. Issued by the National Weather Service, but used by aviation. It is not a forecast, but a report of current conditions. KJKA observations are available on this page. It describes current conditions now, not future conditions.

TAF

highest forecast for the next 24 hours. The National Weather Service issues TAFs four times a day, at 0000Z, 0600Z, 1200Z, and 1800Z. A TAF is issued for a specific airport and is valid for a specific period of time. The TAF is issued by the National Weather Service, but used by aviation. It is not a forecast, but a report of current conditions. KJKA observations are available on this page. It describes current conditions now, not future conditions.

GFS MOS

the GFS MOS is a forecast of the weather conditions at a specific airport and is valid for a specific period of time. The GFS MOS is issued by the National Weather Service, but used by aviation. It is not a forecast, but a report of current conditions. KJKA observations are available on this page. It describes current conditions now, not future conditions.

GFS MOS

the GFS MOS is a forecast of the weather conditions at a specific airport and is valid for a specific period of time. The GFS MOS is issued by the National Weather Service, but used by aviation. It is not a forecast, but a report of current conditions. KJKA observations are available on this page. It describes current conditions now, not future conditions.

GFA

Forecast of the weather conditions at a specific airport and is valid for a specific period of time. The GFA is issued by the National Weather Service, but used by aviation. It is not a forecast, but a report of current conditions. KJKA observations are available on this page. It describes current conditions now, not future conditions.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. The NOTAM query failed this run (state: RATE_LIMITED), so the NOTAM list is unknown rather than empty.

 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

not a forecast condition. KBFM observes conditions now.

proxy fault. (state)

resolved. calibration airport MOS (state)

labelled. resolved. MOS (state)

press. This period office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category. NOTAMs were read for KBFM this run.

Unfiltered hazard feeds (not route-filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR.

Scope: Hazard counts are raw feeds. Not proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

issued hourly, or as needed for significant changes in weather. METARs are issued by the FAA and are not a forecast. KBFM observations describe current conditions now, not future conditions.

TAF

The National Weather Service issues TAFs for airports with a forecast. TAFs are issued by the FAA and are not a forecast. KBFM observations describe current conditions now, not future conditions.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS MOS is a forecast of the weather conditions at a specific location and time. KBFM observations describe current conditions now, not future conditions.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS MOS is a forecast of the weather conditions at a specific location and time. KBFM observations describe current conditions now, not future conditions.

GFA

The Global Forecast System (GFS) is a numerical weather prediction model. The GFA is a forecast of the weather conditions at a specific location and time. KBFM observations describe current conditions now, not future conditions.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

CURRENT WIND (FAA)

Unavailable

FAA WEATHER CONDITIONS

Unavailable — FAA weather timestamp missing or source unavailable

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

14/32 (140/320°M · 138/318°T) · 18/36 (180/000°M · 178/358°T) — designators and °M headings are magnetic; °T are true; variation 2°W (NOAA WMM2025)

WIND VS RUNWAYS

KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 090 degrees true, 092 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KBFM METAR 292253Z.

condition: KGPT ob describes

fault: (state

calibra: airpor

resolv: MOS (state

This p office run.

category. NOTAMs were read for KGPT this

Unfiltered hazard feeds (not route filtered): LIFR at KSPG; Gulf West: MVFR

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

This p office run. category. NOTAMs were read for KGPT this no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, but only when conditions are not forecast. METARs are issued every hour, but only when conditions are not forecast. METARs are issued every hour, but only when conditions are not forecast.

TAF

The National Weather Service issues TAFs for airports with an operational instrument landing system (ILS) and for airports with a Class II or Class III ILS. TAFs are issued every six hours, but only when conditions are not forecast. TAFs are issued every six hours, but only when conditions are not forecast.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model that provides a forecast of the atmosphere's state. The GFS is used to generate the MOS (Model Output Statistics) for airports. The GFS is used to generate the MOS (Model Output Statistics) for airports. The GFS is used to generate the MOS (Model Output Statistics) for airports.

The GFS is used to generate the MOS (Model Output Statistics) for airports.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

14/32 (140/320°M · 139/319°T) · 18/36 (180/000°M · 179/359°T) — designators and °M headings are magnetic; °T are true; variation 1°W (NOAA WMM2025)

WIND VS RUNWAYS

KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 100 degrees true, 101 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KGPT METAR 292253Z.

MOS (state: them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

LIFR at KSPG; Gulf West: MVFR

G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/

Scope: Hazard counts are raw feeds. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued by the FAA and are not a forecast. KNEW observations are described by the METAR.

TAF

The National Weather Service issues TAFs for airports with an instrument approach procedure. TAFs are issued by the FAA and are not a forecast. KNEW observations are described by the TAF.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS MOS is a forecast of the weather conditions at a specific location. KNEW observations are described by the GFS MOS.

GFS EX

The Global Forecast System (GFS) is a numerical weather prediction model. The GFS EX is a forecast of the weather conditions at a specific location. KNEW observations are described by the GFS EX.

GFA

The Global Forecast System (GFS) is a numerical weather prediction model. The GFA is a forecast of the weather conditions at a specific location. KNEW observations are described by the GFA.

FAA NOTAM (NMS)

Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KNEW this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

18R/36L (180/000°M · 179/359°T) · 18L/36R (180/000°M · 179/359°T) · 09/27 (090/270°M · 089/269°T) — designators and °M headings are magnetic; °T are true; variation 1°W (NOAA WMM2025)

WIND VS RUNWAYS

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 100 degrees true, 101 degrees magnetic, at 8 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 09. Wind source: KNEW METAR 292253Z.

Issued by FM a about numer surface advisory evidence about the airport, not by aviatric witho and vi a long are ra weather, and they never change a flight not a fore proxy resolv labelle press category. NOTAMs were read for KOPF this condition fault. calibra resolv This p run. KOPF ob (state airpor MOS office and valid time and never interprets G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/ describes conditions now (state: them: no category, wind, ceiling, ranking or go/ no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Scope: Hazard counts are raw feeds for the proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued for all airports with an operational runway. METARs are issued for all airports with an operational runway. METARs are issued for all airports with an operational runway.

TAF

highest forecasted ceiling, visibility, and surface wind. TAFs are issued for all airports with an operational runway. TAFs are issued for all airports with an operational runway. TAFs are issued for all airports with an operational runway.

GFS MOS

the GFS MOS is a forecast of the weather conditions at a specific location. The GFS MOS is a forecast of the weather conditions at a specific location. The GFS MOS is a forecast of the weather conditions at a specific location.

GFS MOS

range of weather conditions. The GFS MOS is a forecast of the weather conditions at a specific location. The GFS MOS is a forecast of the weather conditions at a specific location. The GFS MOS is a forecast of the weather conditions at a specific location.

GFA

Forecast of the weather conditions at a specific location. The GFA is a forecast of the weather conditions at a specific location. The GFA is a forecast of the weather conditions at a specific location.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

09L/27R (090/270°M · 083/263°T) · 12/30 (120/300°M · 113/293°T) · 09R/27L (090/270°M · 083/263°T) — designators and °M headings are magnetic; °T are true; variation 7°W (NOAA WMM2025)

WIND VS RUNWAYS

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 340 degrees true, 347 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 30. NOTAM-affected runway ends, hatched separately from the wind highlight: 09L, 27R, 09R and 27L. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KOPF METAR 292253Z.

condition: KHPN ob describes

fault: (state conditions nov

calibra: airport

resolv: MOS (state: no-go

This p office run. them: no category, wind, ceiling, tanking or go

category. NOTAMs were read for KHPN this run. no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Unfiltered hazard feeds (not route filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR at KSAV.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or as needed for significant changes in weather. METARs are issued by the FAA and are not a forecast. KHPN observations describe current conditions now, not future conditions.

TAF

The National Weather Service issues TAFs for airports with a forecast. TAFs are issued by the FAA and are not a forecast. KHPN observations describe current conditions now, not future conditions.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. It provides a forecast of weather conditions for a given location and time. KHPN observations describe current conditions now, not future conditions.

GFS MOS

The Global Forecast System (GFS) is a numerical weather prediction model. It provides a forecast of weather conditions for a given location and time. KHPN observations describe current conditions now, not future conditions.

GFA

Forecast of weather conditions for a given location and time. KHPN observations describe current conditions now, not future conditions.

NOTAM

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

16/34 (160/340°M · 147/327°T) · 11/29 (110/290°M · 097/277°T) — designators and °M headings are magnetic; °T are true; variation 13°W (NOAA WMM2025)

WIND VS RUNWAYS

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 292256Z.

not a forecast condition. KBED observes conditions now.

proxy fault. (state)

resolved. (airport)

labelled. MOS (state)

press. This period office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

category. NOTAMs were read for KBED this run.

Unfiltered hazard feeds (not route-filtered): 1 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR.

Scope: Hazard counts are raw feeds. Not a route assessment. Proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

METAR

issued hourly, or more frequently if conditions are changing rapidly. METARs are issued on a 10-minute cycle. The first METAR is issued at 00:00 UTC, and subsequent METARs are issued every 10 minutes. METARs are issued by the FAA, and are not a forecast. METARs are issued for KBED on a 10-minute cycle. METARs describe current conditions at the airport.

TAF

highest ceiling, lowest visibility, and most probable weather conditions. TAFs are issued every 6 hours. TAFs are issued by the FAA, and are not a forecast. TAFs are issued for KBED on a 6-hour cycle. TAFs describe forecast conditions at the airport.

GFS MOS

the GFS MOS is a forecast of the most probable weather conditions. The GFS MOS is issued every 6 hours. The GFS MOS is issued by the FAA, and is not a forecast. The GFS MOS is issued for KBED on a 6-hour cycle. The GFS MOS describes forecast conditions at the airport.

GFS eX

range of weather conditions. The GFS eX is issued every 6 hours. The GFS eX is issued by the FAA, and is not a forecast. The GFS eX is issued for KBED on a 6-hour cycle. The GFS eX describes forecast conditions at the airport.

GFA a

Forecast of weather conditions. The GFA a is issued every 6 hours. The GFA a is issued by the FAA, and is not a forecast. The GFA a is issued for KBED on a 6-hour cycle. The GFA a describes forecast conditions at the airport.

FAA NOTAM (NMS)

— Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

AIRPORT STATUS

FAA status unavailable — airport is not covered by this feed

RWY

Runway and wind context

Surveyed runway geometry and measured destination wind; verify current runway use and NOTAMs.

ALL RUNWAYS

11/29 (110/290°M · 096/276°T) · 05/23 (050/230°M · 036/216°T) — designators and °M headings are magnetic; °T are true; variation 14°W (NOAA WMM2025)

WIND VS RUNWAYS

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 260 degrees true, 274 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. NOTAM-affected runway ends, hatched separately from the wind highlight: 11 and 29. The wind-favoured end 29 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KBED METAR 292251Z.

 - Extended outlook and hazard-feed states are reported in the source stamp.
 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 16 SIGMET records, 22 G-AIRMET records, 1 CWA records. Regional current observations (not corridor forecasts): Atlantic South: MVFR at KSAV; Atlantic North: MVFR at KCRG; Gulf East: IFR/LIFR at KSPG; Gulf West: MVFR at KJKA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.

- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 292256Z 09003. AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 60/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=16, G-AIRMET=22, CWA=1; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=24, RATE_LIMITED=6; normalized records=810; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 97 (eff. 07/09/2026); Chart Supplement Ed. 4 (eff. 07/09/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Aug 28 – Mon Aug 31, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 3 of 3 active trip days in Fri Aug 28 – Mon Aug 31, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helps the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Aug 29, 18:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF.
- Sun Aug 30, 06:00–22:00 ET: IFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Aug 31, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- A forecast flight category is available for 3 of 3 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (3/3 d), KBED VFR (3/3 d), KBFM MVFR (3/3 d), KCRE MVFR (3/3 d), KCRG MVFR (3/3 d), KDAB VFR (3/3 d), KECP MVFR (3/3 d), KFIN VFR (3/3 d), KGKT MVFR (3/3 d), KGPT MVFR (3/3 d), KHPN MVFR (3/3 d), KHSB MVFR (3/3 d); 17 further airports in section 2.

- NOTAMs: 23 of 29 destinations report an active NOTAM; 6 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 39 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 39 of 39 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — MT_OBSC: contains KROA, KAVL (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KGKT 1 NM, KTRI 22 NM, KLZU 52 NM, KSHD 55 NM. valid 2026-08-29 20:45Z to 2026-08-30 03:00Z.
- G-AIRMET TANGO — TURB-HI: contains KTRI, KGKT, KSHD, KROA, KAVL, KLZU, KHPN (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBED 6 NM, KBFM 59 NM, KCRE 63 NM, KMYR 64 NM, KPNS 65 NM, KJKA 77 NM, KECF 77 NM, KGPT 78 NM, KSAV 84 NM, KJZI 88 NM, KHXD 95 NM. valid 2026-08-29 20:45Z to 2026-08-30 03:00Z.
- SIGMET 38E — CONVECTIVE: contains KMYR, KCRE (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KJZI 10 NM, KHXD 54 NM, KSAV 80 NM. valid 2026-08-29 23:55Z to 2026-08-30 01:55Z.
- SIGMET 39E — CONVECTIVE: contains KSGJ, KFIN, KSPG, KSRQ, KVNC, KTPF, KDAB, KOPF (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 5 NM, KSSI 54 NM. valid 2026-08-29 23:55Z to 2026-08-30 01:55Z.
- SIGMET 40E — CONVECTIVE: contains KGPT (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBFM 8 NM, KJKA 9 NM, KNEW 34 NM, KPNS 35 NM, KECF 83 NM. valid 2026-08-29 23:55Z to 2026-08-30 01:55Z.
- SIGMET 41E — CONVECTIVE: contains KSSI, KJZI, KHXD, KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KCRG 20 NM, KSGJ 44 NM, KMYR 62 NM, KFIN 73 NM, KCRE 75 NM, KDAB 92 NM. valid 2026-08-29 23:55Z to 2026-08-30 01:55Z.
- SIGMET 42E — CONVECTIVE: contains KGKT, KAVL, KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 43 NM. valid 2026-08-29 23:55Z to 2026-08-30 01:55Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KOPF 75 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-08-29 20:45Z to 2026-08-30 03:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KTRI 6 NM, KLZU 7 NM, KPNS 18 NM, KJKA 24 NM, KGKT 27 NM, KAVL 28 NM, KECF 33 NM, KBFM 53 NM, KGPT 79 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-08-29 20:45Z to 2026-08-30 03:00Z.
- SIGMET 08C — CONVECTIVE: boundary within 100 NM of KNEW 55 NM. valid 2026-08-29 23:55Z to 2026-08-30 01:55Z.
- 29 of 39 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 16, G-AIRMET 22, CWA 1; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-08-30T00:20:25.065601+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 1 of 18 current NOTAMs are new by that baseline — 08/025 (OBSTRUCTION, last_updated_at 2026-08-28T06:28:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
