Evidence & limitations

- METAR source state: ok; observed Sep 11 23:51 ET; retrieved Sep 12 01:48 ET; 117 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- Raw METAR: SPECI KLZU 120351Z AUTO 10004KT 10SM SCT011 BKN110 23/ A3002 RMK A02 \$
- KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 100 degrees true, 106 degrees magnetic,

at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it.
Wind-favoured runway end, highlighted: 07. Wind source: KLZU METAR 120351Z.

Important planning / evidence detail (1 warning)

LEGEND **VFR** **MVFR** **IFR** **LIFR** **Unknown**  Solid = source-interval category guidance  Dashed = lower-confidence outlook  Weather icon = surface forecast All times Eastern (ET), 24-hour clock · “around/after” preserves source precision.  △ KLZU has no TAF station. Every KLZU TAF-derived value on this page is taken from the nearby **KPDK** proxy station, not from KLZU itself — treat it as regional, and confirm KLZU conditions in an official briefing.
A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- NWS-day
- MAV
- MEX
- GFA
- NOTAM

METAR – issued hourly. The NWS issues SPECI reports when visibility, wind, or other conditions change significantly. Issued by aviation weather offices, not a forecast. KLZU observations describe current conditions now, not this trip day.

TAF – The NWS issues TAFs every 6 hours. The TAF covers a period of 24 hours, starting at 06:00 UTC. It includes a forecast of weather conditions for the next 24 hours, including wind, clouds, and precipitation. The TAF is issued by the NWS and is valid until 06:00 UTC the following day.

NWS hour – Weather Service hourly forecast. The NWS issues hourly forecasts every 6 hours, starting at 06:00 UTC. The forecast covers a period of 1 hour, starting at 06:00 UTC. It includes a forecast of weather conditions for the next hour, including wind, clouds, and precipitation. The forecast is issued by the NWS and is valid until 06:00 UTC the following day.

NWS day/night – Weather Service day/night forecast. The NWS issues day/night forecasts every 6 hours, starting at 06:00 UTC. The forecast covers a period of 12 hours, starting at 06:00 UTC. It includes a forecast of weather conditions for the next 12 hours, including wind, clouds, and precipitation. The forecast is issued by the NWS and is valid until 06:00 UTC the following day.

GFS Model – The GFS Model is a global weather model that provides a forecast of weather conditions for the next 10 days. The model is issued by the NWS and is valid until 06:00 UTC the following day. The model is used to generate the TAF and the NWS hour/night forecasts.

GFS ensemble – The GFS ensemble is a global weather model that provides a forecast of weather conditions for the next 10 days. The model is issued by the NWS and is valid until 06:00 UTC the following day. The model is used to generate the TAF and the NWS hour/night forecasts.

GFA and NOTAM – GFA and NOTAM are both used to provide information about the airport. GFA is a forecast of weather conditions for the next 10 days, while NOTAM is a notice to air traffic about a change in the airport's status. Both are issued by the NWS and are valid until 06:00 UTC the following day.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

METAR — issued hourly. The highest visibility, wind, and temperature are reported. Issued by the FAA and not a forecast. KLZU obs describes

TAF — The National Weather Service issues a TAF for each station. It contains a forecast of weather conditions for the next 24 to 30 hours, including wind, visibility, and clouds. It is the most reliable source of weather information for flight planning.

NWS hour — The National Weather Service issues a 3-hourly forecast of weather conditions for the next 24 to 30 hours, including wind, visibility, and clouds. It is the most reliable source of weather information for flight planning.

NWS day/night — The National Weather Service issues a 12-hourly forecast of weather conditions for the next 24 to 30 hours, including wind, visibility, and clouds. It is the most reliable source of weather information for flight planning.

GFS MEX — The Global Forecasting System (GFS) is a numerical weather prediction model. It provides a range of forecast products, including surface weather, clouds, and precipitation. The GFS is the primary source of weather information for flight planning.

GFS extended range — The Global Forecasting System (GFS) is a numerical weather prediction model. It provides a range of forecast products, including surface weather, clouds, and precipitation. The GFS is the primary source of weather information for flight planning.

GFA and NOTAM — The Global Forecasting System (GFA) and Notices to Air Missions (NMS) are issued continuously by the FAA and are valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

SHORT TERM

..
(This afternoon through Saturday)
Issued at 255 PM EDT Fri Sep 11 2026

Showers and thunderstorms were quick to develop today with activity starting to fire as early as 12PM. The initial push of precipitation is currently moving through Columbus with additional convection developing as far north as I-20 where a differential heating boundary has set up. Per the 12z FFC sounding, PWs are sitting right at 1.87" which is above the 90th percentile climatologically. Thus, showers and thunderstorms will be efficient rain producers and could drop a quick 1-2" in a short amount of time lending to a non-zero chance of localized flash flooding in the typical spots. Frequent lightning and gusty winds (up to 40 MPH) will accompany all storms. Sufficient instability will make up for lack of shear overall and lend to an isolated damaging wind gust threat across North Georgia (along/north of I-20) through this evening.

A secondary push of precipitation is still being highlighted by some of the hi-res guidance moving into western Georgia after 3-4 AM in association with a weak surface low. Patchy fog and low clouds are also likely to be around early Saturday as moisture remains high and winds remain light. However, coverage of fog will be highly dependent on any lingering showers and storms which could inhibit development and extent. Otherwise, a rinse and repeat forecast (literally) can be expected for North and Central GA Saturday. Scattered to numerous showers and storms peaking during the afternoon and potentially lingering after the sun goes down.

LONG TERM

..
(Sunday morning through next Thursday)
Issued at 255 PM EDT Fri Sep 11 2026

By Sunday morning the main frontal boundary from the short term will have moved into central GA with a slightly drier airmass moving into North GA. Deep moisture from the Gulf will remain in place across central and south GA with diurnally driven storms expected. This frontal boundary continue to move south clearing the area by Mon morning. The drier airmass remain across the area through the middle of next week keeping precipitation chances at 20% or less each day (Mon-Thu).

Temps will stay in the upper 80s to middle 90s through day 7 but with the drier airmass moving in Heat index values will slowly fall through the middle of next week. Dewpoints Sunday and Mon will be in the lower to middle 70s but they will fall into the lower to middle 60s by Wed. Even with temps still in the lower 90s it will feel a bit more comfortable.

...New 06Z Aviation Discussion...

.KEY MESSAGES...

- Isolated showers and thunderstorms are possible through daybreak, becoming scattered to numerous in coverage into the afternoon. Any storms that form will be capable of producing gusty winds, frequent lightning, and locally heavy rainfall.

- Comparatively hot and humid conditions will return from Sunday on, with diminishing rain chances (<20%).

&&

.SHORT TERM...
(This afternoon through Saturday)
Issued at 255 PM EDT Fri Sep 11 2026

Showers and thunderstorms were quick to develop today with activity starting to fire as early as 12PM. The initial push of precipitation is currently moving through Columbus with additional convection developing as far north as I-20 where a differential heating boundary has set up. Per the 12z FFC sounding, PWs are sitting right at 1.87" which is above the 90th percentile climatologically. Thus,

showers and thunderstorms will be efficient rain producers and could drop a quick 1-2" in a short amount of time lending to a non-zero chance of localized flash flooding in the typical spots. Frequent lightning and gusty winds (up to 40 MPH) will accompany all storms. Sufficient instability will make up for lack of shear overall and lend to an isolated damaging wind gust threat across North Georgia (along/north of I-20) through this evening.

A secondary push of precipitation is still being highlighted by some of the hi-res guidance moving into western Georgia after 3-4 AM in association with a weak surface low. Patchy fog and low clouds are also likely to be around early Saturday as moisture remains high and winds remain light. However, coverage of fog will be highly dependent on any lingering showers and storms which could inhibit development and extent. Otherwise, a rinse and repeat forecast (literally) can be expected for North and Central GA Saturday. Scattered to numerous showers and storms peaking during the afternoon and potentially lingering after the sun goes down.

&&

.LONG TERM...

(Sunday morning through next Thursday)

Issued at 255 PM EDT Fri Sep 11 2026

By Sunday morning the main frontal boundary from the short term will have moved into central GA with a slightly drier airmass moving into North GA. Deep moisture from the Gulf will remain in place across central and south GA with diurnally driven storms expected. This frontal boundary continue to move south clearing the area by Mon morning. The drier airmass remain across the area through the middle of next week keeping precipitation chances at 20% or less each day (Mon-Thu).

Temps will stay in the upper 80s to middle 90s through day 7 but with the drier airmass moving in Heat index values will slowly fall through the middle of next week. Dewpoints Sunday and Mon will be in the lower to middle 70s but they will fall into the lower to middle 60s by Wed. Even with temps still in the lower 90s it will feel a bit more comfortable.

- METAR source state: ok; observed Sep 11 23:54 ET; retrieved Sep 12 01:48 ET; 114 min before this run.
- Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 160 degrees true, 167 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The wind-favoured end 17 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 120354Z.

TS CHANCE

5%

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 9% · TS12 5% · wind 4 kt · 66°F; 20:00 ET sky partly cloudy · PoP12 2% · TS12 1% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 5%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND7 kt

TEMPERATURE78–87 °F

PRECIP CHANCE7%

TS CHANCE30%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 7% · TS12 30% · wind 7 kt · 78°F; 20:00 ET sky clear · PoP12 7% · TS12 6% · wind 7 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 30%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 7% · TS12 30% · wind 7 kt · 78°F; 20:00 ET sky clear · PoP12 7% · TS12 6% · wind 7 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 30%, 12 h precipitation probability 7%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Predicted

WIND6–9 kt

TEMPERATURE79–86 °F

PRECIP CHANCE25%

TS CHANCE43%

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 25% · TS12 43% · wind 6 kt · 79°F; 20:00 ET sky clear · PoP12 11% · TS12 22% · wind 9 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 25%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJZI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · VFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · VFR

06:00–12:00 ET ET · VFR

• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 13% · TS12 35% · wind 7 kt · 79°F; 20:00 ET sky clear · PoP12 8% · TS12 12% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 35%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

OBSER

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.

- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 280 degrees true, 289 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KMYR METAR 120353Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

...ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · IFR

00 ET ET · VFR

00 ET ET · VFR

06:00–12:00 ET ET · VFR

• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 15% · TS12 39% · wind 9 kt · 78°F; 20:00 ET sky clear · PoP12 12% · TS12 12% · wind 9 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 15%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KCRE METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.00 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind from 290 degrees true, 299 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KCRE METAR 120353Z.

Predicted

WIND9–12 kt

TEMPERATURE78–82 °F

PRECIP CHANCE16%

TS CHANCE39%

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 16% · TS12 39% · wind 12 kt · 78°F; 20:00 ET sky clear · PoP12 14% · TS12 12% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 16%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRE this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · VFR
00 ET ET · VFR
00 ET ET · IFR
00 ET ET · VFR
:00 ET ET · VFR
S · 06:00–12:00 ET ET · VFR
• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
• Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 16% · TS12 39% · wind 12 kt · 78°F; 20:00 ET sky clear · PoP12 14% · TS12 12% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 39%, 12 h precipitation probability 16%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

[+ MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

PRECIP CHANCE9%

TS CHANCE35%

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 9% · TS12 35% · wind 6 kt · 79°F; 20:00 ET sky clear · PoP12 7% · TS12 11% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 35%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHXD this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

000 ET ET · VFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

6:00 ET ET · VFR

6 · 06:00–12:00 ET ET · VFR

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 9% · TS12 35% · wind 6 kt · 79°F; 20:00 ET sky clear · PoP12 7% · TS12 11% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 35%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Sep 13 · 00:00–06:00 ET ET · MVFR
- Sun, Sep 13 · 06:00–12:00 ET ET · VFR
- Sun, Sep 13 · 12:00–18:00 ET ET · VFR
- Sun, Sep 13 · 18:00–00:00 ET ET · VFR
- Mon, Sep 14 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 13% · TS12 9% · wind 3 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 8% · TS12 1% · wind 6 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 9%, 12 h precipitation probability 13%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:56 ET; retrieved Sep 12 01:48 ET; 112 min before this run.
- Measured values read from the KSGJ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind from 260 degrees true, 267 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 24. Wind source: KSGJ METAR 120356Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND6–9 kt

TEMPERATURE77–84 °F

PRECIP CHANCE43%

TS CHANCE40%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · TS12 40% · wind 6 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 31% · wind 9 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 40%, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAY) Model Output Statistics

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSGJ this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

GFS MEX - MVFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 39% · TS12 42% · wind 5 kt · 78°F; 20:00 ET sky clear · PoP12 19% · TS12 30% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 42%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

- 00 ET ET · VFR
- 00 ET ET · VFR
- 00 ET ET · MVFR
- 00 ET ET · MVFR
- 00 ET ET · VFR
- Sun, Sep 13 · 06:00–12:00 ET: GFS MAV MOS · 06:00–12:00 ET ET · VFR

• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 39% · TS12 42% · wind 5 kt · 78°F; 20:00 ET sky clear · PoP12 19% · TS12 30% · wind 7 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 42%, 12 h precipitation probability 39%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:55 ET; retrieved Sep 12 01:48 ET; 113 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

Predicted

WIND3–6 kt

TEMPERATURE75–81 °F

PRECIP CHANCE43%

DEWPOINT74 °F

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · wind 3 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 39% · wind 6 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

OBSTRUCTION

OBSTRUCTION — FIRST TOWER LOST (ASR 1202000) 202507 30N0011245 30W (0 3NM WNW FIN) 272.0FT (259.0FT AGL) UPS

Effective 2026-08-12T21:17:00Z → 2026-10-20T12:47:00Z

5 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KFIN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 43% · wind 3 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 39% · wind 6 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:56 ET; retrieved Sep 12 01:48 ET; 112 min before this run.
- Measured values read from the KGKT METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KGKT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28. Wind from 290 degrees true, 297 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 28. Wind source: KGKT METAR 120356Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND1–5 kt

TEMPERATURE67–82 °F

PRECIP CHANCE10%

DEWPOINT65 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 10% · wind 1 kt · 67°F; 20:00 ET sky partly cloudy · PoP12 4% · wind 5 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover clear, 12 h precipitation probability 10%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

a normal condition, not a failure.

FAA NOTAM (NIMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Time and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 29% · TS12 20% · wind 4 kt · 66°F; 20:00 ET sky clear · PoP12 17% · TS12 16% · wind 7 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 20%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

• KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 100 degrees true, 103 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 16. Wind source: KECP METAR 120353Z.

Whole-day conditions outlook

WIND

5–7 kt

TEMPERATURE

77–85 °F

PRECIP CHANCE

29%

TS CHANCE

44%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 44% · wind 5 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 21% · wind 7 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 44%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KECP this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 220 degrees true, 222 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 26. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The wind-favoured end 26 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 120353Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND7 kt

TEMPERATURE77–86 °F

PRECIP CHANCE23%

TS CHANCE47%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 47% · wind 7 kt · 77°F; 20:00 ET sky clear · PoP12 27% · TS12 21% · wind 7 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 47%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

64 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · VFR

00 ET ET · VFR

06:00 ET ET · VFR

06:00–12:00 ET ET · VFR

Sun, Sep 13 · 12:00–18:00 ET · GFS MAV MOS · 12:00–18:00 ET ET · VFR

- **Sun, Sep 13 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 47% · wind 7 kt · 77°F; 20:00 ET sky clear · PoP12 27% · TS12 21% · wind 7 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 47%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

WIND3–7 kt

TEMPERATURE77–81 °F

PRECIP CHANCE42%

TS CHANCE49%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 42% · TS12 49% · wind 3 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 47% · TS12 28% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 49%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

... and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR
- Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR
- Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 42% · TS12 49% · wind 3 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 47% · TS12 28% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 49%, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:55 ET; retrieved Sep 12 01:48 ET; 113 min before this run.
- Measured values read from the KJKA METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.92 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind from 200 degrees true, 202 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 17. Wind source: KJKA METAR 120355Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND4–6 kt

TEMPERATURE75–84 °F

PRECIP CHANCE23%

TS CHANCE40%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 40% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 22% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 40%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJKA this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

- **Sun, Sep 13 · 18:00–00:00 ET:** GFS MAV MOS · 18:00–00:00 ET ET · VFR
- **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 40% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 32% · TS12 22% · wind 6 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 40%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 280 degrees true, 282 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KBFM METAR 120353Z.

WPC surface prog raster chart for F+048 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

Predicted

WIND3–5 kt

TEMPERATURE77–87 °F

PRECIP CHANCE20%

TS CHANCE43%

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 20% · TS12 43% · wind 3 kt · 77°F; 20:00 ET sky clear · PoP12 24% · TS12 19% · wind 5 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · MVFR

0000 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

6:00 ET ET · MVFR

6 · 06:00–12:00 ET ET · VFR

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative (“Predicted”) value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 20% · TS12 37% · wind 4 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 19% · wind 5 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 37%, 12 h precipitation probability 20%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KSPG METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 170 degrees true, 176 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 120353Z.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSPG this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 13 • 18:00–00:00 ET: GFS MAV MOS • 18:00–00:00 ET ET • VFR

• Mon, Sep 14 • **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 50% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 52% · TS12 30% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 50%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:55 ET; retrieved Sep 12 01:48 ET; 113 min before this run.
- Measured values read from the KTPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.98 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 070 degrees true, 076 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. Wind source: KTPF METAR 120355Z.

11 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTPF this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

be and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

000 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

000 ET ET · VFR

6:00 ET ET · VFR

2:00 ET ET · VFR

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 13 • 18:00–00:00 ET: GFS MAV MOS • 18:00–00:00 ET ET • VFR

• **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 53% · wind 4 kt · 81°F; 20:00 ET sky ovc · PoP12 54% · TS12 24% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 53%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.99 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 100 degrees true, 106 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KSRQ METAR 120353Z.

• Sun, Sep 13 • 12:00–18:00 ET: GFS MAV MOS • 12:00–18:00 ET ET • VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

- **Mon, Sep 14 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 41% · TS12 47% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 59% · TS12 35% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 47%, 12 h precipitation probability 41%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:55 ET; retrieved Sep 12 01:48 ET; 113 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.97 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 100 degrees true, 106 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 13. Wind source: KVNC METAR 120355Z.

GFS MEX - IFR (Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 46% · TS12 53% · wind 6 kt · 80°F; 20:00 ET sky ovc · PoP12 62% · TS12 33% · wind 9 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 53%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND3–5 kt

TEMPERATURE74–84 °F

PRECIP CHANCE18%

DEWPOINT74 °F

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 18% · wind 3 kt · 74°F; 20:00 ET sky partly cloudy · PoP12 28% · wind 5 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

180° true · 181° magnetic · 3 kt

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:53 ET; retrieved Sep 12 01:48 ET; 115 min before this run.
- Measured values read from the KNEW METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.93 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 180 degrees true, 181 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 18R and 18L. Wind source: KNEW METAR 120353Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND6 kt

TEMPERATURE82–87 °F

PRECIP CHANCE15%

TS CHANCE32%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 15% · TS12 32% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 30% · TS12 13% · wind 6 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 32%, 12 h precipitation probability 15%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR — the routine surface observation

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KNEW observation was read this run. It describes conditions now, not this trip day.

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KNEW this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

06:00–12:00 ET ET · VFR

• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · VFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 14 · **Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 15% · TS12 32% · wind 6 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 30% · TS12 13% · wind 6 kt · 87°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 32%, 12 h precipitation probability 15%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

🌀

 WIND5–7 kt

🌡️

 TEMPERATURE81–83 °F

💧

 PRECIP CHANCE27%

⚡

 TS CHANCE71%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 71% · wind 5 kt · 81°F; 20:00 ET sky partly cloudy · PoP12 39% · TS12 23% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 71%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

360° true · 013° magnetic · 5 kt · also NOTAM-affected: 16 and 34

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:56 ET; retrieved Sep 12 01:48 ET; 112 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 360 degrees true, 013 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 120356Z.

Predicted

PREDICTED · NOT A FLIGHT CATEGORY

Whole-day conditions outlook

WIND14–17 kt

TEMPERATURE63 °F

PRECIP CHANCE43%

TS CHANCE8%

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 43% · TS12 8% · wind 14 kt · 63°F; 20:00 ET sky partly cloudy · PoP12 8% · TS12 18% · wind 17 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 8%, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

00 ET ET · VFR

06:00–12:00 ET ET · LIFR

• Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · MVFR

• Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · VFR

• Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 43% · TS12 8% · wind 14 kt · 63°F; 20:00 ET sky partly cloudy · PoP12 8% · TS12 18% · wind 17 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 8%, 12 h precipitation probability 43%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Evidence & limitations

- METAR source state: ok; observed Sep 11 23:51 ET; retrieved Sep 12 01:48 ET; 117 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.04 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 190 degrees true, 204 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KBED METAR 120351Z.

GFS MEX - MVFR
(Predicted)

PREDICTED · NOT A FLIGHT CATEGORY

Evidence & limitations

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 7% · wind 8 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 13% · wind 13 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 7%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

...ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

- Sun, Sep 13 · 12:00–18:00 ET: GFS MAV MOS · 12:00–18:00 ET ET · LIFR
- Sun, Sep 13 · 18:00–00:00 ET: GFS MAV MOS · 18:00–00:00 ET ET · IFR
- Mon, Sep 14 · Whole-day rough outlook: Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 7% · wind 8 kt · 62°F; 20:00 ET sky partly cloudy · PoP12 17% · TS12 13% · wind 13 kt · 63°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 7%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-12=GFS, 2026-09-13=GFS, 2026-09-14=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

 - Extended outlook and hazard-feed states are reported in the source stamp.

• Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 15 SIGMET records, 30 G-AIRMET records. Regional current observations (not corridor forecasts): Mountain: MVFR at KROA; Atlantic South: category unavailable at KSGJ; Gulf West: category unavailable at KHSA.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: SPECI KLZU 120351Z AUTO . AWC METAR state OK for 29/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 90/90 airport-days; planned-window board coverage 3/3; combined target forecast coverage for 30/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=15, G-AIRMET=30, CWA=0; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=767; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

FACTS BY CODE · GROUPING BY MODEL · NO MODEL-WRITTEN FACT

A plain restatement of evidence shown in full below. Every fact here was computed by code and is quoted exactly as code wrote it; a model was allowed only to group those facts and join them with connecting words. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. The full five-part evidence follows underneath.

- Data quality is OK, as the page header badge reports; it gates publication and is not a weather statement. This restates evidence shown in full below; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check.

- Trip-window feasibility evidence (Derived): 2 of 3 active trip days carry a forecast flight category and 1 carry none. This is a derivation about how much evidence exists, not a go/no-go call and not a flight category. Trip window: Fri Sep 11 – Mon Sep 14, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time. 29 of 29 covered destinations resolve a forecast flight category this run. This is coverage, not a ranking.
- 45 hazard areas retained a coordinate ring this run, 45 of them valid inside the trip window, by the geometric test named below. KLZU current observation: VFR — conditions now, not a trip day. KLZU: 0 of 17 current NOTAMs are new by the stated 72-hour publication window.

Full evidence, unchanged: the five parts in the owner's order

1 • Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 11 – Mon Sep 14, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 3 active trip days in Fri Sep 11 – Mon Sep 14, 2026 carry a forecast flight category and 1 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 • KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sat Sep 12, 06:00–22:00 ET: LIFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sun Sep 13, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from MOS.
- Mon Sep 14, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 3 active trip days; 1 reaches no category-capable product at this lead time.
- Data quality: OK — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL LIFR (2/3 d), KBED LIFR (2/3 d), KBFM MVFR (2/3 d), KCRE IFR (2/3 d), KCRG MVFR (2/3 d), KDAB MVFR (2/3 d), KECP MVFR (2/3 d), KFIN MVFR (2/3 d), KGKT LIFR (2/3 d), KGPT MVFR (2/3 d), KHPN LIFR (2/3 d), KHSa MVFR (2/3 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 45 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 29 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 45 of 45 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KSHD, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 61 NM. valid 2026-09-12 03:41Z to 2026-09-12 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KLZU (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KAVL 26 NM, KGKT 34 NM, KTRI 82 NM. valid 2026-09-12 03:41Z to 2026-09-12 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KROA (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTRI 43 NM, KAVL 85 NM. valid 2026-09-12 03:41Z to 2026-09-12 09:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KNEW 19 NM, KCRG 26 NM, KSSI 35 NM, KSGJ 36 NM, KFIN 40 NM, KDAB 43 NM, KTPF 44 NM, KVNC 45 NM, KSRQ 51 NM, KSPG 53 NM, KGPT 57 NM, KOPF 65 NM, KSAV 83 NM, KBFM 93 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-12 02:45Z to 2026-09-12 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KLZU 24 NM, KSAV 27 NM, KSSI 43 NM, KHxD 51 NM, KECP 72 NM, KCRG 76 NM, KJZI 89 NM, KSGJ 100 NM. valid 2026-09-12 03:41Z to 2026-09-12 09:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 78 NM. valid 2026-09-12 03:41Z to 2026-09-12 09:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 62 NM. valid 2026-09-12 03:41Z to 2026-09-12 09:00Z.
- SIGMET 22E — CONVECTIVE: boundary within 100 NM of KSPG 33 NM, KTPF 37 NM, KSRQ 48 NM, KVNC 66 NM, KFIN 71 NM, KDAB 76 NM, KSGJ 79 NM, KCRG 89 NM, KECP 97 NM. valid 2026-09-12 04:55Z to 2026-09-12 06:55Z.
- SIGMET 24E — CONVECTIVE: boundary within 100 NM of KOPF 28 NM. valid 2026-09-12 04:55Z to 2026-09-12 06:55Z.
- SIGMET 26E — CONVECTIVE: boundary within 100 NM of KCRE 57 NM, KMYR 61 NM. valid 2026-09-12 04:55Z to 2026-09-12 06:55Z.
- SIGMET 27E — CONVECTIVE: boundary within 100 NM of KSHD 100 NM. valid 2026-09-12 04:55Z to 2026-09-12 06:55Z.
- 34 of 45 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.

• Hazard feed record counts this run, unfiltered and national: SIGMET 15, G-AIRMET 30, CWA 0; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-12T05:48:51.128321+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 17 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 09/014 (OTHER) states: “SVC AUTOMATED WX BCST SYSTEM NOT AVBL”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
