METAR — issued hourly, with a SPECI report if conditions change. METARs include visibility, wind, clouds, and temperature. Issued by the NWS, but not a forecast. KLZU observations describe current conditions now, not this trip day.

TAF — The National Weather Service digital forecast cell containing KLZU, updated every 6 hours and reaching about 156 miles. TAFs are by-hour sky, wind and pressure, and it is the spine of the forecast on this board. The NWS hourly forecast reaches this day. TAFs cover part of this day.

NWS hourly gridpoint forecast for the GFS model. The NWS forecast is by the National Weather Service in three-hour periods. It carries a forecast category, so this is the flight category. The forecast corroborates the GFS forecast.

GFS MOS (Model Output Statistics) — the GFS model output. It is a forecast by the National Weather Service in three-hour periods. It carries a forecast category, so this is the flight category. The forecast corroborates the GFS forecast.

GFA and GFS MOS are the same. GFA is a forecast by the National Weather Service in three-hour periods. It carries a forecast category, so this is the flight category. The forecast corroborates the GFS forecast.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — the routine hourly observation of weather conditions at an airport, issued hourly by the National Weather Service. It includes information on visibility, wind, temperature, dew point, and cloud cover. METAR reports are used by pilots and other aviation professionals to make decisions about flight. METAR is not a forecast, and it is the spine of the change view on this board. The NWS hourly gridpoint forecast for KLZU observation was read this run. It describes conditions now, not this trip day.

NWS hourly gridpoint forecast — the National Weather Service digital forecast for a specific cell containing KLZU, updated throughout the day and reaching about 156 hours. It includes by-hour sky, wind and precipitation forecasts, and it is the spine of the change view on this board. The NWS hourly gridpoint forecast reaches this day.

GFS extended range forecast — the Global Forecasting System (GFS) extended range forecast, published every twelve hours. Coarse resolution, but it includes a long range outlook for the next 72 hours. This product is published every 12 hours and includes flight category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

GFA and FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

METAR — the routine hourly observation report issued hourly by the National Weather Service. It includes current conditions, visibility, wind, temperature, and other relevant data. Issued by the observing station, it is not a forecast, and conditions right now. The KLZU observation was read this run. It describes conditions now, not this trip day.

Precipitation probability (PoP) 11–20%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

NWS hourly gridpoint forecast — the National Weather Service digital forecast for a specific cell containing KLZU, updated throughout the day and reaching about 156 hours. It includes by-hour sky, wind and precipitation forecasts, and it is the spine of the change view on this board. The NWS hourly gridpoint forecast reaches this day.

Precipitation probability (PoP) 11–20%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

GFS extended range forecast — Coarse resolution, numerical model output, a long range forecast, short-range outlook, published by the GFS office and valid time and never interpreted. It includes them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Precipitation probability (PoP) 20–22%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

GFA and TFRs — Forecast Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

Precipitation probability (PoP) 20–22%

Conditions only — not a flight category; states nothing about ceiling or visibility. Beyond the 72 h short-range GFS MOS horizon at this lead time. The product published normally; this day is simply past its reach, which is expected and is not a fault. Expected to be covered from about Fri Sep 4 · 12:00 AM ET.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

Precipitation probability (PoP) 20–22%

SHORT TERM

..
(Today through Saturday)
Issued at 222 AM EDT Fri Sep 4 2026

The ridge that has been responsible for our recent stretch of relatively hot and humid weather will remain parked over the area again today. Under mostly sunny skies and light easterly winds, muggy low temps in the 70s this morning will rise to the 90s by the afternoon. Heat index values will peak in the 100-105 range,

highest in Northwest GA where a Heat Advisory is in effect through this evening. Across Central GA, there will be potential for some relief from the heat this afternoon as some moisture surges in from the south and supports scattered afternoon showers and storms. These will be our typical summertime pop-up storms, capable of producing gusty winds, frequent lightning, and locally heavy rainfall.

On Saturday, the persistent ridge will finally start to be pinched westward as broad troughing nudges in from the northeast. Even with this slight shift in the pattern, it will be another day of highs in the 90s and heat index values in the triple digits as the hot and humid airmass persists. Sufficient moisture and instability will support isolated to scattered afternoon showers and storms across the area. A few members of the high-resolution model suite have a weakening line of storms moving from TN into North GA during the evening to overnight hours associated with a shortwave, but confidence in this threat is quite low at this time.

LONG TERM

..
(Saturday night through Thursday)
Issued at 222 AM EDT Fri Sep 4 2026

The long-term pattern begins with the upper-level ridge temporarily shifting westward allowing for greater influences of an upper-level through anchored along the eastern seaboard. On Sunday, a few impulses of instability will move along the trough and eject into the CWA preceding a weak backdoor 'cold' front. This will contribute to the possibility of more organized showers and thunderstorms Sunday afternoon through the overnight period. As such, some of these storms could be strong to isolated severe with Machine learning (ML) models highlighting some risk over the CWA. The main consideration is how much instability remains over our area during the period of increased forcing and that is to be determined. All that being said, the primary threat from these storms would be strong to damaging wind gusts, frequent lightning, and heavy rainfall.

Beyond the weekend, temperatures will start off a little cooler on Monday with increased cloud cover behind our front as the upper- level ridge begins to pendulum back toward our area into the first of next week. Expect temperatures to climb back into the low to mid 90s through the week along with the isolated to scattered diurnal thunderstorm chances.

.AVIATION...
(12Z TAFS)
Issued at 640 AM EDT Fri Sep 4 2026

VFR conditions early this morning except for MVFR-IFR CIGs across CSG and MCN areas, which will lift and scatter through late morning. 4-5kft CU fields develop across the area during the afternoon, with SCT SHRA/TSRA around the CSG and MCN sites through the evening. There is potential for an ISO SHRA/TSRA as far north as ATL, but chances are too low to include. Another round of low CIGs and patchy FG Sat AM at CSG and MCN. Winds becoming E-SE at 5-8 kts during the day, then going light again tonight.

//ATL Confidence...12Z Update...

KAVL METAR 041154Z

KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 17 and 35. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KAVL METAR 041154Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

42 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KAVL this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · MVFR

0 ET ET · MVFR

00 ET ET · IFR

00 ET ET · IFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

an outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

5) for this ET day · 08:00 ET sky partly cloudy · PoP12 45% · TS12 38% · wind 4 kt · 70°F; 20:00 ET sky partly cloudy · PoP12 25% · TS12 31% · wind 7 kt · 77°F. The single value shown is the least favourable of those published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 38%, 12 h precipitation probability 45%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 33% · TS12 37% · wind 5 kt · 68°F; 20:00 ET sky ovc · PoP12 26% · TS12 23% · wind 8 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 37%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind is calm, so no arrow is drawn and no runway is marked as favoured. NOTAM-affected runway ends, hatched separately from the wind highlight: 05 and 23. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KTRI METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KTRI this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

the outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative "(Predicted)" value is shown alongside — still a prediction, not a flight category.

(S) for this ET day · 08:00 ET sky partly cloudy · PoP12 63% · TS12 36% · wind 4 kt · 70°F; 20:00 ET sky partly cloudy · PoP12 26% · TS12 34% · wind 6 kt · 77°F. The single value shown is the least favourable of those published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 36%, 12 h precipitation probability 63%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 24% · TS12 31% · wind 5 kt · 67°F; 20:00 ET sky ovc · PoP12 23% · TS12 14% · wind 6 kt · 75°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 31%, 12 h precipitation probability 24%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 290 degrees true, 299 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 041154Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

12:00–18:00 ET ET · VFR

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

- 18:00–00:00 ET ET · VFR
- with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 35% · TS12 27% · wind 5 kt · 73°F; 20:00 ET sky ovc · PoP12 33% · TS12 29% · wind 8 kt · 74°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Mon, Sep 7 · Whole-day rough outlook:

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 18% · TS12 31% · wind 7 kt · 66°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 3% · wind 7 kt · 72°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 18%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

NOTAMs

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

4 Act on2 Brief

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

+ Forecast evidence

METAR

METAR — the routine surface observation

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial). This airport has no TAF station of its own, so KTYS is used as a proxy; that is a normal condition, not a failure.

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGKT this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR
0 ET ET · VFR
0 ET ET · VFR
0 ET ET · VFR
0 ET ET · VFR
12:00–18:00 ET ET · VFR
18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- (s) for this ET day · 08:00 ET sky partly cloudy · PoP12 48% · wind 2 kt · 71°F; 20:00 ET sky partly cloudy · PoP12 12% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 12% · wind 4 kt · 70°F; 20:00 ET sky ovc · PoP12 26% · wind 5 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h precipitation probability 26%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - VFR** • clear below 12,000 ft (CLR) METAR observed / retrieved: 2026-09-04T11:55:00+00:00

10 sm 20 °C 21 °C Calm · METAR measured: KSHD METAR 041155Z

WIND VS RUNWAYS

KSHD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSHD METAR 041155Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Forecast evidence

METAR

issued hourly by the reporting station, with SPECI reports off-cycle, carrying ceiling, visibility, wind, temperature and altimeter. Issued by the observing station and distributed by aviationweather.gov. This is measured fact, not a forecast, and on this page it describes conditions right now, not this day. A current KSHD observation was read this run. It describes conditions now, not this trip day.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSHD this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

an outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky ovc · PoP12 29% · TS12 27% · wind 4 kt · 64°F; 20:00 ET sky ovc · PoP12 15% · TS12 20% · wind 5 kt · 67°F. The single value shown is the least favourable of those points; it is not a
ing or visibility for them.

- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 27%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · TS12 8% · wind 3 kt · 59°F; 20:00 ET sky clear · PoP12 8% · TS12 6% · wind 4 kt · 69°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 8%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

METAR observed / retrieved: 2026-09-04T11:53:00+00:00

☞ 10 sm 🌡 26 °C 🌡 26 °C 🌀 360° true at 3 kt · METAR measured: KSAV METAR 041153Z

WIND VS RUNWAYS

KSAV runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 10/28, 01/19. Wind from 360 degrees true, 007 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 01. Wind source: KSAV METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and

t a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 15% · TS12 25% · wind 7 kt · 79°F; 20:00 ET sky ovc · PoP12 53% · TS12 15% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it

is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 15%, 12 h precipitation probability 53%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 46% · TS12 54% · wind 7 kt · 73°F; 20:00 ET sky ovc · PoP12 38% · TS12 26% · wind 9 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 54%, 12 h precipitation probability 46%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSSI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 16/34. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSSI METAR 041155Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 26% · TS12 35% · wind 6 kt · 80°F; 20:00 ET sky ovc · PoP12 60% · TS12 17% · wind 9 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 17%, 12 h precipitation probability 60%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 52% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 50% · TS12 36% · wind 9 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 52%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KJZI METAR 041155Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 25% · TS12 19% · wind 9 kt · 80°F; 20:00 ET sky ovc · PoP12 52% · TS12 31% · wind 11 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 31%, 12 h precipitation probability 52%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 50% · TS12 57% · wind 11 kt · 73°F; 20:00 ET sky ovc · PoP12 50% · TS12 33% · wind 11 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 57%, 12 h precipitation probability 50%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 17% · TS12 24% · wind 8 kt · 80°F; 20:00 ET sky ovc · PoP12 51% · TS12 21% · wind 10 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 21%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 53% · wind 10 kt · 74°F; 20:00 ET sky ovc · PoP12 45% · TS12 29% · wind 9 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 53%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSGJ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 06/24, 02/20. Seaplane water lanes (17W, 35W, 18W, 36W, 12W and 30W) are excluded from the diagram and are never marked as favoured. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KSGJ METAR 041149Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 42% · wind 5 kt · 77°F; 20:00 ET sky ovc · PoP12 49% · TS12 17% · wind 7 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 58% · TS12 50% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 61% · TS12 37% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 50%, 12 h precipitation probability 58%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KFIN METAR 041150Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

- **Sun, Sep 6 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 26% · wind 4 kt · 75°F; 20:00 ET sky ovc · PoP12 42% · wind 6 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 42%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 49% · wind 3 kt · 74°F; 20:00 ET sky ovc · PoP12 59% · wind 7 kt · 76°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover ovc, 12 h precipitation probability 49%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

FRI 04 SEP

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface analysis, F+000 h from the Fri 04 Sep 12Z cycle · file published Fri 04 Sep 11Z, read from the image response, which places it in the Fri 04 Sep 06Z cycle, not the computed Fri 04 Sep 12Z · valid Fri 04 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 340 degrees true, 349 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. NOTAM-affected runway ends, hatched separately from the wind highlight: 18 and 36. The wind-favoured end 36 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KMYR METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KMYR this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 46% · TS12 29% · wind 10 kt · 77°F; 20:00 ET sky ovc · PoP12 55% · TS12 39% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 39%, 12 h precipitation probability 55%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 52% · TS12 54% · wind 10 kt · 73°F; 20:00 ET sky ovc · PoP12 46% · TS12 33% · wind 13 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 54%, 12 h precipitation probability 52%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KCRE METAR 041153Z

KCRE runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KCRE METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

2 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRE this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 48% · TS12 29% · wind 11 kt · 78°F; 20:00 ET sky ovc · PoP12 56% · TS12 39% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 29%, 12 h precipitation probability 48%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 51% · TS12 54% · wind 10 kt · 74°F; 20:00 ET sky ovc · PoP12 45% · TS12 33% · wind 13 kt · 77°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 54%, 12 h precipitation probability 51%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KCRG this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

12:00–18:00 ET ET · VFR
 18:00–00:00 ET ET · VFR

with outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(S) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 42% · wind 6 kt · 78°F; 20:00 ET sky ovc · PoP12 51% · TS12 19% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it

is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 42%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 59% · TS12 51% · wind 4 kt · 76°F; 20:00 ET sky ovc · PoP12 58% · TS12 37% · wind 7 kt · 79°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover ovc, 12 h thunderstorm probability 51%, 12 h precipitation probability 59%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

KECP METAR 041153Z

KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 040 degrees true, 043 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KECP METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 30% · TS12 58% · wind 6 kt · 77°F; 20:00 ET sky ovc · PoP12 53% · TS12 22% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 58%, 12 h precipitation probability 30%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 54% · TS12 56% · wind 7 kt · 77°F; 20:00 ET sky partly cloudy · PoP12 50% · TS12 37% · wind 8 kt · 80°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 56%, 12 h precipitation probability 54%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 020 degrees true, 022 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

0 ET ET · MVFR

0 ET ET · MVFR

0 ET ET · MVFR

0 ET ET · MVFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 58% · wind 7 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 39% · TS12 24% · wind 8 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 58%, 12 h precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 37% · TS12 44% · wind 7 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 45% · TS12 38% · wind 9 kt · 84°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 44%, 12 h precipitation probability 37%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ [MOS target-window outlook \(GFS / GFS Extended \(MEX\)\)](#)

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KDAB runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07L/25R, 16/34, 07R/25L. Wind from 220 degrees true, 227 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 25R and 25L. Wind source: KDAB METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 27% · TS12 51% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 40% · TS12 16% · wind 8 kt · 81°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 51%, 12 h precipitation probability 27%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky ovc · PoP12 44% · TS12 51% · wind 5 kt · 76°F; 20:00 ET sky ovc · PoP12 57% · TS12 35% · wind 7 kt · 78°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 51%, 12 h precipitation probability 44%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KSPG runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25, 18/36. Wind from 170 degrees true, 176 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KSPG METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMS.

outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and at a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(5) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · TS12 44% · wind 7 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 14% · TS12 14% · wind 9 kt · 85°F. The single value shown is the least favourable of those published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 44%, 12 h precipitation probability 11%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 16% · TS12 33% · wind 7 kt · 83°F; 20:00 ET sky ovc · PoP12 39% · TS12 18% · wind 8 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 33%, 12 h precipitation probability 16%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Current observation **OBS - VFR** · clear below 12,000 ft (CLR) METAR observed / retrieved: 2026-09-04T11:55:00+00:00

☼ 9 sm 🌡 26 °C 🌡 25 °C 🌀 140° true at 4 kt · METAR measured: KTPF METAR 041155Z

WIND VS RUNWAYS

KTPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 04/22, 18/36. Wind from 140 degrees true, 146 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 18. Wind source: KTPF METAR 041155Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

SURFACE PROG CHARTS BY PERIOD · DISPLAYED, NOT INTERPRETED

A raster chart may be displayed with its issuing office and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

FRI 04 SEP

06:00–12:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface analysis, F+000 h from the Fri 04 Sep 12Z cycle · file published Fri 04 Sep 11Z, read from the image response, which places it in the Fri 04 Sep 06Z cycle, not the computed Fri 04 Sep 12Z · valid Fri 04 Sep 06Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

[Open this image at aviationweather.gov](#)

WPC surface analysis raster chart for F+000 h, issued by the Weather Prediction Center and redistributed by the Aviation Weather Center. The image shows fronts, pressure centres and precipitation areas; it is not read by this page.

12:00–18:00 ET ET

NOAA/NWS Weather Prediction Center, redistributed by the Aviation Weather Center · WPC surface prog, F+006 h from the Fri 04 Sep 12Z cycle · file published Fri 04 Sep 11Z, read from the image response, which places it in the Fri 04 Sep 06Z cycle, not the computed Fri 04 Sep 12Z · valid Fri 04 Sep 12Z from that reported publication · displayed, not interpreted: no category, wind, ceiling, ranking or go/no-go on this page is derived from this image

WIND VS RUNWAYS

KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 110 degrees true, 116 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 14. Wind source: KSRQ METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

18:00–00:00 ET ET · VFR

- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 14% · TS12 43% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 13% · TS12 16% · wind 9 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 43%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
 - **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
 - GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 11% · TS12 29% · wind 7 kt · 81°F; 20:00 ET sky ovc · PoP12 28% · TS12 13% · wind 9 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
 - Predicted MVFR from sky cover ovc, 12 h thunderstorm probability 13%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 200 degrees true, 206 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KVNC METAR 041155Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 22% · TS12 60% · wind 6 kt · 80°F; 20:00 ET sky partly cloudy · PoP12 16% · TS12 20% · wind 9 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 60%, 12 h precipitation probability 22%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 9% · TS12 41% · wind 7 kt · 82°F; 20:00 ET sky partly cloudy · PoP12 22% · TS12 11% · wind 9 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 41%, 12 h precipitation probability 9%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

KJKA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 17/35. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KJKA METAR 041156Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

FAA NOTAM (NMS) — Notices to Air

FAA NOTAM (NIMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMS were read for KJKA this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 29% · TS12 48% · wind 5 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 38% · TS12 25% · wind 8 kt · 82°F. The single value shown is the least favourable of those

- * Predicted MVR from sky cover partly cloudy, 12 in thunderstorm probability 48%, 12 in precipitation probability 29%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category. MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 38% · wind 4 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 42% · TS12 37% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 38%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

TAXIWAY 08/024 — TAYP A1, A2 AND TAYP A3 LIPS

Effective 2026-08-26T15:11:00Z → 2026-09-30T23:59:00Z

41 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are

0 ET ET · VFR

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBFM this run.

them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · MVFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 33% · TS12 54% · wind 4 kt · 78°F; 20:00 ET sky partly cloudy · PoP12 41% · TS12 25% · wind 7 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 54%, 12 h precipitation probability 33%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 28% · TS12 47% · wind 4 kt · 79°F; 20:00 ET sky partly cloudy · PoP12 34% · TS12 35% · wind 6 kt · 86°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 47%, 12 h precipitation probability 28%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KGPT this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · MVFR

0 ET ET · MVFR

0 ET ET · MVFR

00 ET ET · MVFR

00 ET ET · MVFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

an outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

5) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · TS12 46% · wind 3 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 54% · TS12 24% · wind 6 kt · 85°F. The single value shown is the least favourable of those published no ceiling or visibility for them.

- Predicted MVFR from sky cover partly cloudy, 12 h thunderstorm probability 46%, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 32% · TS12 54% · wind 4 kt · 76°F; 20:00 ET sky partly cloudy · PoP12 29% · TS12 32% · wind 6 kt · 85°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 54%, 12 h precipitation probability 32%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

- + MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

- 0 ET ET · MVFR
- 0 ET ET · MVFR
- 12:00–18:00 ET ET · VFR
- 18:00–00:00 ET ET · VFR
- h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 31% · wind 3 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 55% · wind 5 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 31%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.
- **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.
- GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 34% · wind 3 kt · 75°F; 20:00 ET sky partly cloudy · PoP12 30% · wind 6 kt · 83°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.
- Predicted VFR from sky cover partly cloudy, 12 h precipitation probability 34%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

From 221°M - 10 kt

KNEW runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18R/36L, 18L/36R, 09/27. Wind from 220 degrees true, 221 degrees magnetic, at 10 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 18R and 18L. Wind source: KNEW METAR 041151Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

KOPF METAR 041153Z

KOPF runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09L/27R, 12/30, 09R/27L. Wind from 190 degrees true, 197 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Equally wind-favoured runway ends, highlighted: 27R and 27L. Wind source: KOPF METAR 041153Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this

2026-09-04T13:46:44.500901Z.

source was read this run; technical environment: preprod.

Effective 2026-03-03T15:34:00Z → 2026-11-16T15:34:00Z

RUNWAY

080050 → RWY 12R LIGHT DIST REMAINING SIGN MISSING

Effective 2026-08-20T11:42:00Z → 2027-08-01T04:00:00Z

RUNWAY

080051 → RWY 08L LIGHT DIST REMAINING SIGN MISSING

Effective 2026-08-20T11:43:00Z → 2027-08-01T04:00:00Z

TAXIWAY

080026 → AIRPORT BLAST PAD CLOSED

Effective 2026-08-10T14:03:00Z → 2026-09-10T04:00:00Z

NAV_APPROACH

ST0004 → WP MIAMI OPA LOCKA EXEC, MIAMI, FL, ILS OR LOC RWY 12, AND 20. AUTOPILOT COUPLED APPROACH NA BELOW 550 MSL. 2026071214-2706071213EST

Effective 2025-05-07T12:14:00Z → 2027-05-07T12:13:00Z

91 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KOPF this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and

t a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky ovc · PoP12 47% · TS12 74% · wind 6 kt · 80°F; 20:00 ET sky ovc · PoP12 54% · TS12 40% · wind 7 kt · 83°F. The single value shown is the least favourable of those points; it is not a

flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover ovc, 12 h thunderstorm probability 74%, 12 h precipitation probability 47%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 36% · TS12 73% · wind 5 kt · 80°F; 20:00 ET sky ovc · PoP12 56% · TS12 36% · wind 7 kt · 82°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted IFR from sky cover partly cloudy, 12 h thunderstorm probability 73%, 12 h precipitation probability 36%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND VS RUNWAYS

▲ From 353°M - 9 kt

KHPN METAR 041156Z

KHPN METAR 041156Z

KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 340 degrees true, 353 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 041156Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHPN this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

(s) for this ET day · 08:00 ET sky partly cloudy · PoP12 14% · TS12 6% · wind 7 kt · 63°F; 20:00 ET sky partly cloudy · PoP12 1% · TS12 7% · wind 8 kt · 65°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 6%, 12 h precipitation probability 14%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 1% · wind 7 kt · 61°F; 20:00 ET sky clear · PoP12 1% · TS12 1% · wind 8 kt · 67°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 1%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

WIND: NO CHANGE IN WIND DIRECTION

KBED METAR 041151Z

KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind is calm, so no arrow is drawn and no runway is marked as favoured. Wind source: KBED METAR 041151Z.

Observation-only values are shown only when this card carries the typed source field. Missing visibility, dewpoint, or condition remains unavailable; runway context is advisory and must be verified with current official sources and NOTAMs.

+ Forecast evidence

METAR

METAR — the routine surface observation

TAF — the Terminal Aerodrome Forecast, the

GFS MOS (MAV) — Model Output Statistics,

GFS extended MOS (MEX) — the extended-

GFA and prog charts — the Graphical

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KBED this run.

no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

0 ET ET · VFR

12:00–18:00 ET ET · VFR

18:00–00:00 ET ET · VFR

h outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and

t a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

s) for this ET day · 08:00 ET sky partly cloudy · PoP12 23% · TS12 16% · wind 6 kt · 59°F; 20:00 ET sky partly cloudy · PoP12 8% · TS12 4% · wind 12 kt · 63°F. The single value shown is the least favourable of those

points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover partly cloudy, 12 h thunderstorm probability 16%, 12 h precipitation probability 23%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

• **Mon, Sep 7 · Whole-day rough outlook:** Rough outlook — a single value for the whole day from the GFS extended MOS (MEX), which steps in twelve-hour intervals. MEX published no ceiling or visibility here, so this is sky cover, precipitation probability, wind and temperature only: it is not a flight category, is not a resolved forecast, and is never shown with the weight of one. Where those fields are usable a conservative “(Predicted)” value is shown alongside — still a prediction, not a flight category.

• GFS extended MOS (MEX) · 2 published point(s) for this ET day · 08:00 ET sky clear · PoP12 3% · TS12 3% · wind 3 kt · 58°F; 20:00 ET sky clear · PoP12 0% · TS12 0% · wind 7 kt · 68°F. The single value shown is the least favourable of those points; it is not a flight category because MEX published no ceiling or visibility for them.

• Predicted VFR from sky cover clear, 12 h thunderstorm probability 3%, 12 h precipitation probability 3%. This is a conservative prediction from the extended GFS MEX outlook, not a flight category: MEX publishes no ceiling or visibility. Verify day-of against a TAF or short-range MOS.

+ MOS target-window outlook (GFS / GFS Extended (MEX))

Source state: partial; selected by target date: 2026-09-04=GFS, 2026-09-05=GFS, 2026-09-06=MEX, 2026-09-07=MEX. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

- Extended outlook and hazard-feed states are reported in the source stamp.
- Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 13 SIGMET records, 32 G-AIRMET records, 7 CWA records. Regional current observations (not corridor forecasts): Atlantic North: MVFR at KMYR; Gulf East: MVFR at KVNC; Gulf West: MVFR at KNEW; Long-range: IFR/LIFR at KBED.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

6 · Source stamp

Show source stamp and evidence inventory

KLZU METAR excerpt: METAR KLZU 041156Z 00000. AWC METAR state OK for 30/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 90/120 airport-days; planned-window board coverage 4/4; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=13, G-AIRMET=32, CWA=7; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=28, RATE_LIMITED=2; normalized records=885; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 4 – Mon Sep 7, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): partly assessable — 2 of 4 active trip days in Fri Sep 4 – Mon Sep 7, 2026 carry a forecast flight category and 2 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Fri Sep 4, 06:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Sat Sep 5, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.

- Sun Sep 6, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- Mon Sep 7, 06:00–22:00 ET: no flight category at this lead time — no product permitted to state one reaches this day (medium-low confidence).
- A forecast flight category is available for 2 of 4 active trip days; 2 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 • Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL IFR (2/4 d), KBED VFR (2/4 d), KBFM MVFR (2/4 d), KCRE VFR (2/4 d), KCRG IFR (2/4 d), KDAB VFR (2/4 d), KECP LIFR (2/4 d), KFIN VFR (2/4 d), KGKT VFR (2/4 d), KGPT MVFR (2/4 d), KHPN VFR (2/4 d), KHSA MVFR (2/4 d); 17 further airports in section 2.
- NOTAMs: 27 of 29 destinations report an active NOTAM; 2 destination NOTAM queries did not complete. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 52 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 52 of 52 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- SIGMET 71E — CONVECTIVE: contains KOPF (point-in-polygon (ray casting) against the product's own coordinate ring). valid 2026-09-04 12:55Z to 2026-09-04 14:55Z.
- SIGMET 73E — CONVECTIVE: contains KSPG, KVNC, KSRQ (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KTPF 1 NM, KFIN 86 NM, KDAB 89 NM, KSGJ 94 NM. valid 2026-09-04 12:55Z to 2026-09-04 14:55Z.
- SIGMET 79C — CONVECTIVE: contains KBFM, KPNS, KJKA, KGPT, KHSA, KNEW (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KECP 22 NM. valid 2026-09-04 12:55Z to 2026-09-04 14:55Z.
- CWA 302 — IFR over ZJX (Jacksonville): boundary within 100 NM of KSAV 22 NM, KHXD 41 NM, KSSI 44 NM, KJZI 56 NM, KMYR 75 NM, KCRG 79 NM, KLZU 83 NM, KCRE 84 NM. valid 2026-09-04 13:36Z to 2026-09-04 14:15Z.
- CWA 102 — IFR over ZJX (Jacksonville): boundary within 100 NM of KECP 27 NM, KCRG 40 NM, KSSI 55 NM, KSGJ 59 NM, KFIN 81 NM, KPNS 96 NM, KDAB 96 NM, KTPF 96 NM. valid 2026-09-04 13:10Z to 2026-09-04 14:30Z.
- CWA 101 — TS over ZMA (Miami): boundary within 100 NM of KVNC 65 NM, KSRQ 74 NM, KSPG 88 NM. valid 2026-09-04 13:05Z to 2026-09-04 14:00Z.
- CWA 102 — TS over ZHU (Houston): boundary within 100 NM of KNEW 43 NM, KHSA 78 NM, KGPT 96 NM. valid 2026-09-04 13:35Z to 2026-09-04 14:00Z.
- CWA 202 — TS over ZJX (Jacksonville): boundary within 100 NM of KECP 2 NM, KPNS 55 NM, KTPF 74 NM, KSPG 76 NM, KJKA 79 NM, KSRQ 97 NM. valid 2026-09-04 13:28Z to 2026-09-04 14:10Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KROA 31 NM, KTRI 47 NM, KSHD 65 NM, KAVL 67 NM, KCRE 84 NM, KMYR 94 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 08:45Z to 2026-09-04 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KHSA 11 NM, KNEW 19 NM, KGPT 31 NM, KBFM 84 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 08:45Z to 2026-09-04 15:00Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KDAB 81 NM, KFIN 90 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-04 08:45Z to 2026-09-04 15:00Z.
- G-AIRMET SIERRA — IFR: boundary within 100 NM of KBED 39 NM. valid 2026-09-04 13:43Z to 2026-09-04 15:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KSHD 90 NM. valid 2026-09-04 13:43Z to 2026-09-04 15:00Z.
- G-AIRMET SIERRA — MT_OBSC: boundary within 100 NM of KBED 71 NM. valid 2026-09-04 13:43Z to 2026-09-04 15:00Z.
- SIGMET 74E — CONVECTIVE: boundary within 100 NM of KHXD 44 NM, KDAB 45 NM, KFIN 53 NM, KJZI 55 NM, KSGJ 62 NM, KSAV 64 NM, KSSI 68 NM, KCRG 72 NM, KOPF 79 NM. valid 2026-09-04 12:55Z to 2026-09-04 14:55Z.
- SIGMET 76C — CONVECTIVE: boundary within 100 NM of KNEW 71 NM. valid 2026-09-04 12:55Z to 2026-09-04 14:55Z.
- 36 of 52 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 13, G-AIRMET 32, CWA 7; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-04T13:46:26.652239+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: 6 of 23 current NOTAMs are new by that baseline — A0332/26 (OTHER, last_updated_at 2026-09-02T18:09:00+00:00); A0333/26 (OTHER, last_updated_at 2026-09-03T09:34:00+00:00); 09/006 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0335/26 (NAV_APPROACH, last_updated_at 2026-09-03T15:37:00+00:00); A0336/26 (OTHER, last_updated_at 2026-09-03T15:59:00+00:00); 09/008 (OBSTRUCTION, last_updated_at 2026-09-04T03:35:00+00:00).
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.

Shared planning page for N201MD & flying partners · static snapshot of the latest scheduled run · the scheduler checks hourly and republishes once at least 6 h have passed since the last publish, so the refresh lands about 4x a day at times that drift
