• KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 050 degrees true, 056 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 07. METAR – issued hourly. The NWS issues SPECI reports when there is a significant change in visibility, wind, or other weather conditions. Issued by the NWS, not a forecast. KLZU observations describe conditions now, not this trip day.

TAF – highest confidence. The NWS issues TAFs by aviation forecasters. TAFs are not a forecast. KLZU observations describe conditions now, not this trip day.

NWS hour – Weather Service hourly forecast. Cell contains by-hour sky and it is the most detailed. Reaches the board.

NWS day/night – Weather Service day and night forecast. Coarser than hourly. Not a forecast. Reaches the board.

GFS Model – Global Forecast System model. The GFS is a global model. Coarser than hourly. Not a forecast. Reaches the board.

GFS ensemble – Global Forecast System ensemble model. The GFS ensemble is a global model. Coarser than hourly. Not a forecast. Reaches the board.

GFA – Global Forecast System. The GFA is a global model. Coarser than hourly. Not a forecast. Reaches the board.

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KLZU this run.

office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

SHORT TERM

• •

(Today through Monday)

Issued at 343 AM EDT Sun Sep 20 2026

Mostly clear skies across the area this morning on the heels of some fairly strong storms that went through the area yesterday afternoon/evening. Expecting another round of showers and thunderstorms Today but should be a lot less coverage as slightly drier airmass begins to move in across the region. Weak high pressure wedge/ridge building back into the area will also help to suppress diurnally driven convective activity. The current general and marginal risk areas of severe storms from SPC looks good across the region through Monday. Temps remain the 90s through the short term with a cooling trend beginning in the extended periods. Monday should be very similar to Today with another round of isolated showers and thunderstorms.

LONG TERM

• •

(Monday night through Saturday)

Issued at 343 AM EDT Sun Sep 20 2026

The extended period for North and Central Georgia remains largely unchanged with this forecast update. Unsettled weather to start with a return to more seasonable temperatures and lower rain chances as we head into the latter half of the week. The forecast area will be situated in a NW flow regime, supporting the potential for Mesoscale Convective Systems (i.e. thunderstorm complexes) to push through parts of the TN Valley. While pinpointing the origin and evolution of these systems remains uncertain until generally a day or two

prior, the PoP forecast and severe potential through Wednesday will need to be monitored. At this time, rain and thunderstorm chances peak again on Tuesday and Wednesday and lower thereafter due to a pattern change. Thus, keep an eye on the forecast for those with any outdoor plans early to mid-week.

Ensembles continue to favor a cold air damming wedge setting up to the northeast Wednesday night lasting through the end of the work week. Rain changes Thursday heading into the weekend will be much more limited as some drier air works its way into the region. Additionally, forecast high temperatures in the 80s (70s in the mountains) and low temperatures in the 50s to 60s) will finally give us a taste of fall.

Area Forecast Discussion
National Weather Service Peachtree City GA

...Morning Area Forecast Discussion...

.KEY MESSAGES...

- Unseasonably warm conditions will continue into the beginning of the work week. Heat index values will peak in the upper 90s to lower 100s Today and Monday.

- Marginal Risk (level 1 of 5) for severe weather is in effect this evening. Primary threat will be a few damaging wind gusts.

- Rain chances will peak on Monday, Tuesday, and Wednesday. The potential for severe weather will need to be monitored.

- More seasonable temperatures are expected starting midweek.

&&

.SHORT TERM...
(Today through Monday)
Issued at 343 AM EDT Sun Sep 20 2026

Mostly clear skies across the area this morning on the heels of some fairly strong storms that went through the area yesterday afternoon/evening. Expecting another round of showers and thunderstorms Today but should be a lot less coverage as slightly drier airmass begins to move in across the region. Weak high pressure wedge/ridge building back into the area will also help to suppress diurnally driven convective activity. The current general and marginal risk areas of severe storms from SPC looks

good across the region through Monday. Temps remain the 90s through the short term with a cooling trend beginning in the extended periods. Monday should be very similar to Today with another round of isolated showers and thunderstorms.

&&

.LONG TERM...
(Monday night through Saturday)
Issued at 343 AM EDT Sun Sep 20 2026

The extended period for North and Central Georgia remains largely unchanged with this forecast update. Unsettled weather to start with a return to more seasonable temperatures and lower rain chances as we head into the latter half of the week. The forecast area will be situated in a NW flow regime, supporting the potential for Mesoscale Convective Systems (i.e. thunderstorm complexes) to push through parts of the TN Valley. While pinpointing the origin and evolution of these systems remains uncertain until generally a day or two prior, the PoP forecast and severe potential through Wednesday will need to be monitored. At this time, rain and thunderstorm chances peak again on Tuesday and Wednesday and lower thereafter due to a pattern change. Thus, keep an eye on the forecast for those with any outdoor plans early to mid-week.

Ensembles continue to favor a cold air damming wedge setting up to the northeast Wednesday night lasting through the end of the work week. Rain changes Thursday heading into the weekend will be much more limited as some drier air works its way into the region. Additionally, forecast high temperatures in the 80s (70s in the mountains) and low temperatures in the 50s to 60s) will finally give us a taste of fall.

.AVIATION...
(06Z TAFS)
Issued at 150 AM EDT Sun Sep 20 2026

SHRA/TSRA has ended with mostly clear skies across the area. Light and variable winds this morning becoming easterly in the 4-8kt range this afternoon. No restrictions to VSBYs now We could see some lower VSBYs with fog development around daybreak...but it will be short lived. There will be more isolated SHRA/TSRA this afternoon but thinking it will be very isolated so decided not to include any mention in the TAF.

//ATL Confidence...06Z Update...

Confidence high on all elements.

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-

This card shows it only as a labelled rough outlook and never as a resolved forecast. No usable MEX MOS guidance for the planned dates at this airport (state: stale). The product reaches about 192 hours.

Land runways drawn: 09/27, 04/22. Wind from 360 degrees true, 008 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 04. METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KHXD this run.

Evidence & limitations

- METAR source state: ok; observed Sep 20 06:53 ET; retrieved Sep 20 08:23 ET; 90 min before this run.
- Measured values read from the KECP METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.95 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KECP runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34. Wind from 310 degrees true, 313 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Evidence & limitations

- METAR source state: ok; observed Sep 20 06:53 ET; retrieved Sep 20 08:23 ET; 90 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 330 degrees true, 332 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 201053Z.

Evidence & limitations

- METAR source state: ok; observed Sep 20 06:35 ET; retrieved Sep 20 08:23 ET; 108 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.89 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 070 degrees true, 076 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 05. Wind source: KVNC METAR 201035Z.

Evidence & limitations

- METAR source state: ok; observed Sep 20 06:56 ET; retrieved Sep 20 08:23 ET; 87 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.07 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 120 degrees true, 133 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. Wind source: KHPN METAR 201056Z.

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical

Forecast for Aviation and the Weather Prediction Center surface progs, issued by the National Weather Service through the day; the surface prog series reaches 144 hours. They are raster images a pilot reads for fronts, pressure systems and precipitation shields. This page displays them with their issuing office and valid time and never interprets them: no category, wind, ceiling, ranking or go/no-go here is derived from an image. A published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Source state: partial; selected by target date: 2026-09-20=GFS, 2026-09-21=GFS. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 9 SIGMET records, 31 G-AIRMET records, 3 CWA records. Regional current observations (not corridor forecasts): Mountain: IFR/LIFR at KAVL, KTRI; Mountain: MVFR at KSHD; Atlantic South: IFR/LIFR at KSAV, KJZI; Atlantic North: category unavailable at KMYR.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 18 – Mon Sep 21, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 2 of 2 active trip days in Fri Sep 18 – Mon Sep 21, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: LIFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sun Sep 20, 06:00–22:00 ET: IFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Sep 21, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL IFR (2/2 d), KBED LIFR (2/2 d), KBFM VFR (2/2 d), KCRE VFR (2/2 d), KCRG MVFR (2/2 d), KDAB VFR (2/2 d), KECF MVFR (2/2 d), KFIN VFR (2/2 d), KGKT VFR (2/2 d), KGPT MVFR (2/2 d), KHPN IFR (2/2 d), KHSA MVFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 43 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 43 of 43 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- CWA 102 — IFR over ZJX (Jacksonville): contains KJZI, KHXD, KSAV (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KSSI 34 NM, KMYR 62 NM, KCRE 76 NM, KCRG 80 NM, KLZU 96 NM. valid 2026-09-20 12:06Z to 2026-09-20 14:06Z.

- 26 of 43 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 9, G-AIRMET 31, CWA 3; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-20T12:23:42.926951+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 10 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- No service-status wording was found in the published text of the 10 current KLZU records. The scan reads every record's full published text rather than its category, so a status stated inside a record of another category would still be reported.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.
