Evidence & limitations

- METAR source state: ok; observed Sep 13 10:56 ET; retrieved Sep 13 12:19 ET; 83 min before this run.
- Measured values read from the KLZU METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- Raw METAR: METAR KLZU 131456Z 27005KT 10SM CLR 28/26 A3009 RMK A02 SLP187 T02780256 50009 \$

• KLZU runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 07/25. Wind from 270 degrees true, 276 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 25. Wind source: KLZU METAR 131456Z.

SHORT TERM

..
(Today through Monday)
Issued at 318 AM EDT Sun Sep 13 2026

Patchy dense fog has developed across portions of northeast Georgia this morning, and further development is possible, especially in areas that received heavy rainfall yesterday. As mid-level ridging moves in aloft on Sunday, meaningful precipitation chances will be effaced by strengthening subsidence, reinforced by building high pressure at the surface. Isolated thunderstorms are possible across our far southern tier, in the vicinity of a lingering tendril of increased moisture, but most will see a dry (if hot) end to the weekend.

The start of the work week will see a backdoor cold front approach north Georgia, with surface winds shifting solidly to the northeast as it does so. An isolated shower or thunderstorm is possible across the terrain of northeast Georgia, otherwise expecting minimal sensible impacts from its arrival -- temperatures are actually likely to climb a couple of degrees, topping out more solidly in the 90s areawide.

LONG TERM

..
(Monday night through Saturday)
Issued at 318 AM EDT Sun Sep 13 2026

The long term period will begin on Monday night with an upper ridge extending from the Deep South into southeast Canada. A surface high associated with this ridge will also be moving from the eastern Great Lakes towards the Northeast. Though low level moisture from the Gulf will linger across Georgia (with dewpoints in the upper 60s to low 70s), subsidence of dry mid-level air under the ridge will largely suppress convection on Tuesday afternoon, with only isolated thunderstorms anticipated in portions of east-central Georgia. Underneath mostly clear skies, high temperatures are forecast to rise into the low 90s in all but the far northeastern mountains on Tuesday afternoon. Late Tuesday into Wednesday, the surface high will lead to the development of a CAD wedge along the lee side of the Appalachian, which is expected to spread relatively cooler and drier air into the eastern portions of Georgia. Low temperatures on Wednesday and Thursday will start each morning in the 60s while high temperatures in the afternoons will be largely in the upper 80s. With the upper ridge lingering over the eastern CONUS, rain chances will remain minimal across the forecast area on Wednesday and Thursday. Chances for diurnally-driven showers and thunderstorms will gradually increase starting on Friday and into next weekend as the axis of the ridge begins to retrograde back to the west of the area.

...New 12Z Aviation Discussion...

.KEY MESSAGES...

- Hot and dry conditions are expected for most on Sunday.

- Patchy dense fog is possible this morning in areas that received recent heavy rainfall in recent days.

- Surface high pressure will suppress meaningful rain chances through Friday (15% or less each afternoon).

&&

.SHORT TERM...

(Today through Monday)

Issued at 318 AM EDT Sun Sep 13 2026

Patchy dense fog has developed across portions of northeast Georgia this morning, and further development is possible, especially in areas that received heavy rainfall yesterday. As mid-level ridging

moves in aloft on Sunday, meaningful precipitation chances will be effaced by strengthening subsidence, reinforced by building high pressure at the surface. Isolated thunderstorms are possible across our far southern tier, in the vicinity of a lingering tendril of increased moisture, but most will see a dry (if hot) end to the weekend.

The start of the work week will see a backdoor cold front approach north Georgia, with surface winds shifting solidly to the northeast as it does so. An isolated shower or thunderstorm is possible across the terrain of northeast Georgia, otherwise expecting minimal sensible impacts from its arrival -- temperatures are actually likely to climb a couple of degrees, topping out more solidly in the 90s areawide.

&&

.LONG TERM...
(Monday night through Saturday)
Issued at 318 AM EDT Sun Sep 13 2026

The long term period will begin on Monday night with an upper ridge extending from the Deep South into southeast Canada. A surface high associated with this ridge will also be moving from the eastern Great Lakes towards the Northeast. Though low level moisture from the Gulf will linger across Georgia (with dewpoints in the upper 60s to low 70s), subsidence of dry mid-level air under the ridge will largely suppress convection on Tuesday afternoon, with only isolated thunderstorms anticipated in portions of east-central Georgia. Underneath mostly clear skies, high temperatures are forecast to rise into the low 90s in all but the far northeastern mountains on Tuesday afternoon. Late Tuesday into Wednesday, the surface high will lead to the development of a CAD wedge along the lee side of the Appalachian, which is expected to spread relatively cooler and drier air into the eastern portions of Georgia. Low temperatures on Wednesday and Thursday will start each morning in the 60s while high temperatures in the afternoons will be largely in the upper 80s. With the upper ridge lingering over the eastern CONUS, rain chances will remain minimal across the forecast area on Wednesday and Thursday. Chances for diurnally-driven showers and thunderstorms will gradually increase starting on Friday and into next weekend as the axis of the ridge begins to retrograde back to the west of the area.

&&

.AVIATION...
(12Z TAFS)
Issued at 628 AM EDT Sun Sep 13 2026

Primarily VFR conds exp thru the TAF pd, and perhaps SKC at times. Patchy SCT IFR cigs are psbl thru 15Z, and are likely to be accompanied by MVFR vsbys in BR. Otherwise, FEW-SCT cu at 2.5-5kft this aftn. Winds will remain out of the W side at 5-10kts.

//ATL Confidence...12Z Update...
High confidence all elements.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:54 ET; retrieved Sep 13 12:19 ET; 85 min before this run.
- Measured values read from the KAVL METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.14 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KAVL runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35. Wind from 340 degrees true, 347 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. Wind source: KAVL METAR 131454Z.

00Z

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the

highest-resolution aviation forecast available. The National Weather Service issues it four times a day, valid 24 to 30 hours, with explicit FM and TEMPO change groups. Airports without their own TAF station use a nearby proxy, which is a normal condition and not a fault. A TAF was read for this airport this run (state: partial).

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSSI this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:35 ET; retrieved Sep 13 12:19 ET; 104 min before this run.
- Measured values read from the KJZI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.03 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KJZI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 09/27, 04/22. Wind from 250 degrees true, 258 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 27. Wind source: KJZI METAR 131435Z.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:53 ET; retrieved Sep 13 12:19 ET; 86 min before this run.
- Measured values read from the KMYR METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.02 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KMYR runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 18/36. Wind from 290 degrees true, 299 degrees magnetic, at 9 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KMYR METAR 131453Z.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:51 ET; retrieved Sep 13 12:19 ET; 88 min before this run.
- Measured values read from the KHxD METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHxD runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 03/21. Wind from 260 degrees true, 268 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 21. Wind source: KHxD METAR 131451Z.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:53 ET; retrieved Sep 13 12:19 ET; 86 min before this run.
- Measured values read from the KTRI METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.11 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KTRI runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 05/23, 09/27. Wind from 210 degrees true, 218 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KTRI METAR 131453Z.

300° true · 309° magnetic · 11G20 kt

Evidence & limitations

• METAR source state: ok; observed Sep 13 10:54 ET; retrieved Sep 13 12:19 ET; 85 min before this run.

• Measured values read from the KROA METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.04 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KROA runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 06/24, 16/34. Wind from 300 degrees true, 309 degrees magnetic, at 11 knots gusting 20 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. Wind source: KROA METAR 131454Z.

NAV APPROACH 121004 — NAV VOR/DME DECOMMISSIONED

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSGJ this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

+ MOS target-window outlook (GFS)

Source state: partial; selected by target date: 2026-09-13=GFS, 2026-09-14=GFS. MEX is a 12-hour coarse outlook and is not used as an aviation-category signal.

Wind favours RWY 29
290° true · 297° magnetic · 6 kt

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:50 ET; retrieved Sep 13 12:19 ET; 89 min before this run.
- Measured values read from the KFIN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KFIN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 06/24. Seaplane water lanes (18W and 36W) are excluded from the diagram and are never marked as favoured. Wind from 290 degrees true, 297 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 29. Wind source: KFIN METAR 131450Z.

330° true · 332° magnetic · 6 kt · NOTAM-affected: 08 and 26

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:53 ET; retrieved Sep 13 12:19 ET; 86 min before this run.
- Measured values read from the KPNS METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KPNS runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 17/35, 08/26. Wind from 330 degrees true, 332 degrees magnetic, at 6 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 35. NOTAM-affected runway ends, hatched separately from the wind highlight: 08 and 26. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KPNS METAR 131453Z.

+ Forecast evidence

METAR	
METAR — the routine surface observation issued hourly by the reporting station, with	
TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.	
GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against	
GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in	
GFA and prog charts — the Graphical Forecast for Aviation and the Weather	
FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are	ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KPNS this run.

published VFR Surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

the GFS model bias-corrected against decades of observations at this station. Issued four times a day in three-hourly steps out to about 72 hours. It carries an explicit ceiling and visibility category, so this card uses it to resolve a day the TAF cannot reach. A station-calibrated GFS MOS product was read for this airport this run (state: partial).

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KDAB this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

6 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and

and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KJKA this run.

published VFR surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:53 ET; retrieved Sep 13 12:19 ET; 86 min before this run.
- Measured values read from the KBFM METAR. This is a current surface observation only; it is not a forecast.

- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBFM runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 350 degrees true, 352 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 36. Wind source: KBFM METAR 131453Z.

Wind favours RWY 32

310° true · 311° magnetic · 4 kt

Evidence & limitations

• METAR source state: ok; observed Sep 13 10:53 ET; retrieved Sep 13 12:19 ET; 86 min before this run.

• Measured values read from the KGPT METAR. This is a current surface observation only; it is not a forecast.

• Only fields decoded from this METAR are shown; every missing field remains unavailable.

• Altimeter: 30.07 inHg.

• The complete raw METAR remains in this airport's Raw products disclosure.

• KGPT runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 18/36. Wind from 310 degrees true, 311 degrees magnetic, at 4 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 32. Wind source: KGPT METAR 131453Z.

- METAR source state: ok; observed Sep 13 10:24 ET; retrieved Sep 13 12:19 ET; 115 min before this run.
- Measured values read from the KSRQ METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.08 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KSRQ runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 14/32, 04/22. Wind from 250 degrees true, 256 degrees magnetic, at 16 knots gusting 22 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 22. Wind source: KSRQ METAR 131424Z.

+ NOTAM DETAILS

FAA NMS: PRODUCTION SOURCE (OWNER-APPROVED)

Source provenance — FAA NMS: Production source per owner decision 2026-08-09; technical transport environment remains preprod. Limited 2026-07-30 spot check covered KLZU, KAVL, and KSGJ (3 of 30 airports). NOTAMs were read from this source and used on this card this run. Typed state: OK. The dot colour reports whether this source was read this run; technical environment: preprod.

20 additional normalized FAA NOTAM records omitted from this view.

+ Forecast evidence

METAR

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics, the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMs were read for KSRQ this run.

published WPC surface chart matches this

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:35 ET; retrieved Sep 13 12:19 ET; 104 min before this run.
- Measured values read from the KVNC METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.05 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KVNC runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 13/31, 05/23. Wind from 190 degrees true, 196 degrees magnetic, at 5 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 23. Wind source: KVNC METAR 131435Z.

+ Forecast evidence

METAR — the routine surface observation issued hourly by the reporting station, with

TAF — the Terminal Aerodrome Forecast, the highest-resolution aviation forecast available.

GFS MOS (MAV) — Model Output Statistics,
the GFS model bias-corrected against

GFS extended MOS (MEX) — the extended-range MOS product, issued twice a day in

GFA and prog charts — the Graphical Forecast for Aviation and the Weather

FAA NOTAM (NMS) — Notices to Air Missions: closures, outages, obstacles and TFRs, issued continuously by the FAA and valid until cancelled. On this page they are advisory evidence about the airport, not weather, and they never change a flight category. NOTAMS were read for KNEW this run.

published WPC surface chart matches this period and is shown in the dropdown with its issuing office and valid time. It is displayed, never interpreted.

ce and valid time. No category, wind, ceiling, ranking or go/no-go on this page is derived from, or attributed to, an image. If retrieval fails the slot says UNAVAILABLE; it is never left blank.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:53 ET; retrieved Sep 13 12:19 ET; 86 min before this run.
- Measured values read from the KOPF METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 30.09 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.

Wind favours RWY 34

340° true · 353° magnetic · 3 kt · also NOTAM-affected: 16 and 34

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:56 ET; retrieved Sep 13 12:19 ET; 83 min before this run.
- Measured values read from the KHPN METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.90 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KHPN runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 16/34, 11/29. Wind from 340 degrees true, 353 degrees magnetic, at 3 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 34. NOTAM-affected runway ends, hatched separately from the wind highlight: 16 and 34. The wind-favoured end 34 is also NOTAM-affected: the wind does favour it, but a NOTAM on this card names it, so the highlight is not a statement that the runway is usable. The hatch marks only that a NOTAM names the runway; it does not decode the NOTAM's effective times, so confirm the closure window in the NOTAM text below. Wind source: KHPN METAR 131456Z.

Evidence & limitations

- METAR source state: ok; observed Sep 13 10:51 ET; retrieved Sep 13 12:19 ET; 88 min before this run.
- Measured values read from the KBED METAR. This is a current surface observation only; it is not a forecast.
- Only fields decoded from this METAR are shown; every missing field remains unavailable.
- Altimeter: 29.96 inHg.
- The complete raw METAR remains in this airport's Raw products disclosure.
- KBED runway and wind diagram. Schematic: alignment only. Magnetic north is up. Runway length, width, relative position and intersections are not drawn and are not published in the runway table. Land runways drawn: 11/29, 05/23. Wind from 140 degrees true, 154 degrees magnetic, at 7 knots. Wind direction is the direction the wind blows FROM, so the arrow starts on the upwind side of the field and points across it. Wind-favoured runway end, highlighted: 11. Wind source: KBED METAR 131451Z.

 - Extended outlook and hazard-feed states are reported in the source stamp.
 - Runway data + Chart Supplement — FAA Chart Supplement (current cycle) — see AirNav link above

3 · Hazard feeds & regional observations

Unfiltered hazard feeds (not route-geometry screened): 9 SIGMET records, 31 G-AIRMET records, 4 CWA records. Regional current observations (not corridor forecasts): Mountain: IFR/LIFR at KSHD; Mountain: MVFR at KTRI, KGKT; Atlantic South: category unavailable at KSGJ; Atlantic North: MVFR at KMYR.

Scope: Hazard counts are raw feed totals and have not been filtered against a proposed route, altitude, or time. Airport flight categories are current point observations, not corridor forecasts.

4 · Planning gates

- **Evidence gate:** an unavailable, stale, or out-of-horizon source is unknown — never treat it as favorable.
- **Weather gate:** compare current observations and valid-period forecasts with personal ceiling, visibility, convection, wind, and crosswind minimums.
- **Route gate:** screen the actual route, altitude, and time against official hazard products; feed totals on this page are not route-filtered.
- **Operations gate:** verify NOTAMs, TFRs, runway conditions, fuel, aircraft performance, daylight, and alternates.

5 · ForeFlight manual cross-check (before flight)

- Official briefing matches these go/no-go windows
- Prog charts / radar / satellite trend agrees with convection timing
- Winds & temps aloft along actual route (may shift ETE)
- **NOTAMs & TFRs** — airport-scoped NMS records may be shown, but route-wide/TFR coverage is not included; pull a fresh official briefing for departure, destination, and alternates
- Runway condition / length / closures at destination & alternate
- Weight & balance + performance at forecast density altitude (heat!)
- File & brief in ForeFlight; confirm fuel stops if long-range

KLZU METAR excerpt: METAR KLZU 131456Z 27005. AWC METAR state OK for 30/30 airports; TAF target coverage for 0/30; MOS fetch health GFS 30/30, MEX 30/30; target coverage 30/60 airport-days; planned-window board coverage 2/2; combined target forecast coverage for 0/30; FAA status known for 0/30. Hazard feeds: state=ok; SIGMET=9, G-AIRMET=31, CWA=4; counts are unfiltered and are not a route assessment.
NWS AFD state: ok · FAA NMS NOTAM states: OK=30; normalized records=718; unnormalized records=0; environment=preprod; sandbox-public-preview=true · Fuel: best-effort (verify) · FAA chart cycle: VFR Sectional Ed. 98 (eff. 09/03/2026); Chart Supplement Ed. 5 (eff. 09/03/2026).

Executive summary

DETERMINISTIC · RESTATES PAGE EVIDENCE · NO MODEL CALLED

A plain restatement of evidence shown in full below, computed from that evidence with no model call. It reports what the sources say; it does not rank the days, rate them, or make a go/no-go call. It follows the order the owner asked for: feasibility evidence, KLZU, destinations, weather by area or region, then new KLZU NOTAMs.

1 · Feasibility evidence for the trip window

This part is a derivation, not an observation: it states how much of the trip window carries a forecast flight category, and nothing more. It is not a go/no-go call, not a recommendation, and not a flight category. Its inputs and its gaps are listed in the tooltip on the line below.

- Trip window: Fri Sep 11 – Mon Sep 14, 2026. “This weekend” is taken to mean exactly this window; no other date range is assessed.
- Trip-window feasibility evidence (Derived): assessable for every active trip day — 2 of 2 active trip days in Fri Sep 11 – Mon Sep 14, 2026 carry a forecast flight category and 0 carry none. This is a derived statement about how much evidence exists, it is not a flight category, and it says nothing about whether a flight is advisable. Every input and every gap is named in this line's tooltip.

2 · KLZU home-base status

The KLZU observation and the per-day board categories, taken from the same helpers the board itself renders from, so the two cannot disagree.

- KLZU current observation: VFR — from the surface observation read this run; it describes conditions now, not a trip day.
- Sun Sep 13, 10:00–22:00 ET: VFR — most restrictive forecast flight category; high confidence; from TAF, MOS.
- Mon Sep 14, 06:00–22:00 ET: VFR — most restrictive forecast flight category; medium confidence; from TAF, MOS.
- A forecast flight category is available for 2 of 2 active trip days; 0 reach no category-capable product at this lead time.
- Data quality: DEGRADED — as reported by the badge in the page header; it gates publication, it is not a weather statement.

3 · Destination coverage

Coverage, not a pick: this counts which destinations a product permitted to state a flight category actually reaches. It is not a ranking, not a recommendation, and the editorial order of the destination list is not a flyability score.

- Destinations: 29 of 29 covered airports resolve a forecast flight category on at least one active trip day; 0 resolve none at this lead time. Counted from the same per-day outlook the destination cards render, with outlook-grade blocks excluded.
- Most restrictive resolved category per covered airport, across the active trip days: KAVL MVFR (2/2 d), KBED IFR (2/2 d), KBFM MVFR (2/2 d), KCRE MVFR (2/2 d), KCRG IFR (2/2 d), KDAB MVFR (2/2 d), KECF MVFR (2/2 d), KFIN MVFR (2/2 d), KGKT VFR (2/2 d), KGPT VFR (2/2 d), KHPN IFR (2/2 d), KHSa VFR (2/2 d); 17 further airports in section 2.
- NOTAMs: 29 of 29 destinations report an active NOTAM. KLZU departure NOTAM state: OK.

4 • Weather events by area or region

Weather events by area or region, from products that carry an area. Per-airport categories are never clustered into a region here: an area inferred that way would be a spatial claim no source made.

- 44 hazard areas retained with their own coordinate rings. Each is related to an airport only by point-in-polygon (ray casting) against the product's own coordinate ring, or by great-circle distance from the airport to the nearest point on the product's boundary within 100 NM — tested against 30 airports that reported a position this run. No area name is inferred: the only names stated are the ones a product supplies itself. Per-airport categories are never clustered into a region.
- 44 of 44 retained hazard areas are valid at some point inside the planned trip window; the rest describe conditions before it.
- G-AIRMET SIERRA — IFR: contains KBED (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KHPN 20 NM. valid 2026-09-13 16:16Z to 2026-09-13 21:00Z.
- G-AIRMET SIERRA — MT_OBSC: contains KSHD, KAVL, KROA, KGKT, KTRI (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KBED 42 NM, KHPN 48 NM, KLZU 55 NM. valid 2026-09-13 16:16Z to 2026-09-13 21:00Z.
- SIGMET 11E — CONVECTIVE: contains KHPN, KBED (point-in-polygon (ray casting) against the product's own coordinate ring). valid 2026-09-13 15:55Z to 2026-09-13 17:55Z.
- SIGMET 14E — CONVECTIVE: contains KTPF, KSPG, KSRQ, KVNC (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KOPF 22 NM, KFIN 40 NM, KCRG 40 NM, KDAB 41 NM, KSGJ 41 NM, KSSI 77 NM. valid 2026-09-13 15:55Z to 2026-09-13 17:55Z.
- SIGMET 15E — CONVECTIVE: contains KECP (point-in-polygon (ray casting) against the product's own coordinate ring); boundary within 100 NM of KPNS 61 NM, KJKA 76 NM, KSPG 93 NM. valid 2026-09-13 15:55Z to 2026-09-13 17:55Z.
- CWA 101 — TS over ZMA (Miami): boundary within 100 NM of KOPF 79 NM. valid 2026-09-13 16:11Z to 2026-09-13 18:10Z.
- G-AIRMET ZULU — FZLVL: boundary within 100 NM of KCRG 13 NM, KECP 33 NM, KSGJ 35 NM, KSSI 36 NM, KROA 40 NM, KTRI 42 NM, KPNS 45 NM, KBFM 49 NM, KGKT 61 NM, KJKA 62 NM, KFIN 65 NM, KGPT 79 NM, KDAB 84 NM, KCRE 86 NM, KHSA 89 NM, KHXD 90 NM, KSAV 92 NM, KMYR 95 NM, KJZI 97 NM; published as a line, not an enclosed area, so no containment test is made against it. valid 2026-09-13 14:45Z to 2026-09-13 21:00Z.
- G-AIRMET ZULU — ICE: boundary within 100 NM of KBED 4 NM, KHPN 12 NM. valid 2026-09-13 14:45Z to 2026-09-13 21:00Z.
- G-AIRMET TANGO — TURB-HI: boundary within 100 NM of KHPN 6 NM, KBED 32 NM, KSHD 51 NM. valid 2026-09-13 14:45Z to 2026-09-13 21:00Z.
- SIGMET 12E — CONVECTIVE: boundary within 100 NM of KDAB 72 NM, KFIN 81 NM, KSGJ 91 NM, KOPF 95 NM. valid 2026-09-13 15:55Z to 2026-09-13 17:55Z.
- SIGMET 13E — CONVECTIVE: boundary within 100 NM of KJZI 61 NM, KCRE 67 NM, KMYR 68 NM, KHXD 83 NM. valid 2026-09-13 15:55Z to 2026-09-13 17:55Z.
- 33 of 44 retained hazard areas could not be related to any airport this page covers, by either test. They remain national-unfiltered: their geography is real but lies outside 100 NM of every airport tested, and nothing is claimed about where they are.
- Hazard feed record counts this run, unfiltered and national: SIGMET 9, G-AIRMET 31, CWA 4; overall feed state ok; feed states — CWA: ok, G-AIRMET: ok, SIGMET: ok. These are totals over the whole feed, not a count near KLZU, not a count along any route, and not a route assessment.

5 • New KLZU NOTAMs

This run keeps no snapshot of the previous run, so “new” cannot mean “changed since last time”. It is defined below as an FAA-published timestamp window, and the service-status scan reads the published text of every KLZU record so a status embedded inside a record of another category is not missed.

- Baseline for “new”: a KLZU NOTAM whose own FAA-published timestamp (last update, else issue, else effective start) falls within the 72 hours before this run's generation time (2026-09-13T16:19:12.896854+00:00). This run holds no copy of the previous run's NOTAM set, so this is a source-timestamp window and not a difference against an earlier run.
- KLZU: none of the 17 current NOTAMs carries an FAA-published timestamp inside that window, so no NOTAM is new by that baseline. The existing records are unchanged, not absent.
- Service-status wording found in the published text of KLZU records, whatever their category — 6/6851 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6854 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 6/6855 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0318/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0319/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; A0320/26 (NAV_APPROACH) states: “LZU AWOS OUT OF SERVICE.”; 09/014 (OTHER) states: “SVC AUTOMATED WX BCST SYSTEM NOT AVBL”. These are verbatim quotations from the record named beside each one; they are text matches inside those records, not NOTAMs of their own, and they are reported whether or not the carrying record is new.

This restates evidence; it is not a recommendation, not an all-clear, and not a data outage. The decision surfaces are the planning gates and the ForeFlight cross-check below, read against the KLZU board and destination cards. Every line above restates a value shown elsewhere on this page.

⚠ **Pre-planning only — not an official weather briefing.** Verify an official briefing, METAR/TAF/GFA/SIGMET/CWA, NOTAMs, TFRs, runway conditions, fuel, W&B, performance, and personal minimums before flight.
